

QUARTERLY RETURN OF MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

~~~~~  
By Authority of the Registrar General.  
~~~~~

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 113.] **Marriages**—*October, November, December, 1876.* [Price 9d.
Births and Deaths—*January, February, March, 1877.*

*General Register Office, Somerset House,
1st May 1877.*

In the UNITED KINGDOM the *births* of 298,435 children, and the *deaths* of 182,489 persons of both sexes, were registered in the three months ending 31st March 1877. The recorded natural increase of population was thus 115,946.

The registered number of persons married in the quarter ending 31st December 1876 was 146,260.

The resident population of the United Kingdom in the middle of 1877 is estimated at 33,444,419; that of England and Wales at 24,547,309, of Scotland at 3,560,715, and of Ireland at 5,336,395. The birth-rate in the United Kingdom in the first quarter of 1877 was 36·2 per 1000, and the death-rate 22·1. The marriage-rate in the fourth quarter of 1876 was 17·5 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2189 Registrars in all the districts of England during the quarter ending 31st March 1877; and the MARRIAGES in 13,747 churches or chapels, in 7796 registered places of worship unconnected with the Established Church, and in 632 Superintendent Registrars' Offices, in the three months ending 31st December 1876.

The returns of the quarter that ended on 31st March, both of births and of deaths, are favourable. The birth-rate is above the average of the season, always the most prolific of the year. The death-rate is exceptionally low for the winter, when the mortality in England is now in the usual course of things higher than in any other season. The temperature was not so low as the average; and persons in advanced life enjoyed unusual immunity. Small-pox has been epidemic in London and Lancashire, but not in the other Divisions. Scarlet fever has been the most fatal of the zymotic diseases, but less fatal than in previous quarters. Fever has been for some time declining, and will no doubt give way as hygienic measures prevail. The health of the town populations is improving; but as the rural districts grow more dense, they lose their peculiar advantages. The mortality in town and country has been low, but the depression is greatest in the towns. The

marriages are returned for the last quarter of the previous year, and the numbers are very near the average; there was no fall implying discouragement in the marriage of the industrial population. They married and were given in marriage very much as usual. The price of wheat was rising, and of potatoes high; of beef below quotations of recent years. Coal was cheaper than it had been.

Marriages.

During the last three months of 1876 the number of persons married in England and Wales was 119,450, and 1750 less than the number in the corresponding quarter of 1875. The marriage-rate was equal to 19·5 per 1000 persons estimated to be living, and was slightly (0·3 per 1000) below the average rate in the preceding corresponding quarters. During the autumn quarters of the 38 years 1838-75 the annual marriage-rate averaged 19·6 per 1000; it was lowest 17·1 in the last quarter of 1842, and highest 21·4 in the same period of 1865. The marriage-rate in the fourth quarter of 1876 was equal to 22·1 per 1000 in London, but ranged in the several counties from 11·4 in the extra-metropolitan portions of Middlesex, to 24·0 and 24·8 in Nottinghamshire and Leicestershire.

The marriage returns for the last quarter of the year being now available, it becomes possible to consider the marriage-rate for the entire year 1876; it was equal to 16·6 per 1000 persons estimated to be living, showing a further slight decline from the rates which prevailed in the three preceding years. Consequently upon the commercial prosperity which had prevailed for some years the marriage-rate in 1866 was equal to 17·7 per 1000; with the commercial panic in that year a decline in the marriage-rate set in, and continued until the end of 1870, during which year the rate was 16·2 per 1000. After 1870 the marriage-rate increased year by year until it reached the maximum of 17·6 in 1873, since which it has again slowly declined. The marriage-rate in 1876 ranged from 10·2 in the extra-metropolitan portion of Middlesex, and 11·6 in Cornwall and Herefordshire, to 19·3 and 19·5 in Nottinghamshire and Lancashire. The marked decline in the marriage-rate in Cornwall reflects the depression of mining industry in that county.

Births.

During the first three months of 1877, ending 31st March, 230,036 births were registered, equal to an annual rate of 38·0 per 1000, corresponding with the rate which prevailed in the first quarter of 1876; the birth-rate, however, exceeded 1·0 per 1000 the average rate which prevailed in the corresponding period of the ten years 1867-76. The mean annual birth-rate in the first quarters of the years 1838-75 was equal to 35·6 per 1000. The rate in the first quarters of 1876 and 1877 exceeded this mean by 2·4 per 1000, a result which may be partly due to the more complete system of registration inaugurated by the Birth and Death Registration Act of 1874. The sex proportion of the children whose births were registered in the quarter was 103 boys to 100 girls. The proportion of boys to girls born in England has decreased during the last 30 years.

The annual birth-rate in the three months under notice ranged from 28·1 in Dorsetshire and Cornwall, to 45·3 and 45·4 in Staffordshire and Durham. In the essentially agricultural counties of the South-western Division the birth-rate did not exceed 30·6 per 1000, whereas it was equal to 42·0 in the principal manufacturing population of the North-western Division, and to 42·7 in the Northern Counties, where the population is mainly engaged in mining. Compared with the birth-rate which prevailed in the corresponding quarter of 1876, the recorded last quarter showed a considerable increase in the Eastern Counties and a marked decrease in Durham.

In twenty of the largest English towns the birth-rate averaged 39·4 per 1000 and exceeded the rate in England and Wales by 1·4. The rate did not exceed 31·0 in Plymouth and Brighton, whereas it ranged upwards to 45·7 and 46·1 in Birmingham and Salford. The birth-rate in Salford is probably over-stated, an under-estimate of the present population of the borough, which will be rectified as soon as the information necessary to supply the basis for a more reliable

estimate is supplied by the local authorities. In fifty other large town districts the birth-rate averaged 39·2 per 1000; it was but 23·3 and 26·0 in Bath and Cheltenham, whereas the rates in the other towns ranged upwards to 51·3 and 53·5 in St. Helens and Wigan.

Movement of the Population.

The *natural* increase to the population of England and Wales during the first three months of 1877, by excess of births over deaths registered, was 95,036, against 52,606 and 87,711 in the corresponding periods of 1875 and 1876. This exceptionally large natural increase to the population was equally due to the high birth-rate and the low death-rate. The number of recent immigrants, consisting in great measure of returned emigrants, being unknown, it is impossible to estimate the *actual* increase to the population during the quarter. Returns issued by the Board of Trade show that only 14,764 emigrants embarked during the three months ending March, from the various ports of the United Kingdom at which emigration officers are stationed, against numbers declining steadily from 37,565 to 17,648 in the corresponding periods of the four preceding years. The number of emigrants in the quarter was considerably lower than that recorded in the March quarter of any year since 1847, the first year for which similar returns are available. Excluding foreigners, and distributing proportionately 521 whose nationality was undistinguished, the emigrants of British origin during the quarter were 12,862 including 9042 English, 1185 Scotch, and 2635 Irish. The proportions of emigrants to a million of the population were 368 from England, 333 from Scotland, and 494 from Ireland. The proportion of emigration from Ireland is rapidly assimilating itself to that which prevails in the other parts of the United Kingdom. Compared with the average proportions of emigrants during the first quarters of the seven years 1870-6, emigration during the corresponding period of 1877 showed a decline of 37 per cent. in England, 39 per cent. in Scotland, and 66 per cent. in Ireland. Notwithstanding the commercial depression in the United States 48 per cent. of the British emigrants during the last quarter left for that destination; 35 per cent. for the Australian Colonies, only 2·0 per cent. for British North America, and 15·0 per cent. for all other places.

Prices, Pauperism, and Meteorology.

The average price of wheat during the three months ending March last was 51s. 4d., showing a further increase of 3s. 2d. upon the average prices that prevailed in the four preceding quarters, and exceeding the average price in any quarter since the third of 1874. The mean wholesale prices of beef and mutton averaged 6½d. and 7½d. per lb., showing a further decline from the mean prices which prevailed in recent quarters. It remains to be seen whether the introduction of fresh American meat, as recently imported, will further reduce the exorbitant prices which have ruled for some years. The average price per ton, of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 16s. 8d., a lower price than has prevailed in any quarter since the three months ending June 1871. In 1873 the mean price of the best coals was 30s. 9d. per ton, since which it has steadily fallen, and during 1876 did not exceed 19s. per ton. The average price of Consols was £95·875, and was 0·25 above the average price during the preceding three months. The minimum annual rate of discount charged by the Bank of England remained at 2l. per cent. throughout the quarter, at which it was fixed on the 19th April 1876, and has since been unchanged.

The average number of paupers relieved on the last day of each week in the quarter was 685,469, of which 152,816 received in-door, and 532,653 out-door relief.

The number of in-door paupers exceeded that in the corresponding quarter of 1876 by 5·3 per cent., whereas the out-door paupers showed a decrease of 4·5 per cent.; the total number of paupers had declined 2·5 per cent. During last quarter 22·3 per cent. of the total paupers, excluding vagrants and lunatic paupers in asylums, were in receipt of in-door relief; in the corresponding period of 1867 the

proportion of in-door to total paupers was but 15·1 per cent., since which it has steadily increased. Pauperism has continuously declined since 1870.

The remarks upon the meteorology of the quarter at the Royal Greenwich Observatory and at other stations of observation, with accompanying tables, furnished by Mr. James Glaisher, F.R.S., will be found on pages 65-72. The meteorology of the quarter was in many respects exceptional. The readings of the barometer were unusually low and the weather stormy; the temperature was high during January and February; rain fell almost continuously, and was especially excessive in January; and the amount of sunshine was remarkably small. Floods generally prevailed in the early part of January; and thunderstorms occurred on 6 days in January, 3 days in February, and 6 days in March. The high temperature which had prevailed with scarcely an exception from the middle of November until the end of the year, continued throughout January and until the 19th February. During the ninety-nine days commencing 13th November and ending 19th February the average daily excess of temperature was equal to 5°·1; and the excess during the last fifty of these days, commencing 1st January, was 6°·0. Between the 20th February and 23rd March, short periods of high and low temperature alternated, but the mean of the twenty-six days showed a daily defect of 2½°. The last eight days of the quarter were uniformly warm, and the average daily excess 2°·9. The winter of 1876-7 was most exceptionally mild; the mean temperature of the three months, December, January, and February averaging 43°·4; this mean exceeded by 5°·4 the average for the corresponding period in 100 years; and the lowest recorded temperature fell below the freezing point of water on only twelve days during these three months. The mean temperature of the quarter ending March last averaged 42°·3, and exceeded by 3°·6 the average for the corresponding period in 106 years, during which there were but six instances of so high a mean temperature for this quarter. In January the mean was 42°·0 and the excess 6°·2, in February 43°·5 and 4°·9 above the average, whereas the mean fell in March to 40°·7 and showed a slight defect. The mean temperature of the quarter at 47 stations of observations ranged from 39°·1 at Kelstern Grange (near Louth, Lincolnshire), to 46°·5 at Ventnor.

The measured rain-fall during the quarter at the Greenwich Observatory was 8·3 inches, and exceeded by 3·3 inches the average amount in the corresponding period of 62 years. In January 4·4 inches of rain were measured, showing an excess of 2·5 inches; in February and March the amounts were 1·7 and 2·2 inches, and the excess 0·2 and 0·6 inch, respectively. So far back as 1815 the excessive rain-fall of last January was without precedent, although more than 4 inches were measured in the January both of 1828 and of 1868. The rain-fall of the three months ending January last was more than double the average amount in 62 years. At the various stations of observation the number of days on which rain was measured during the quarter ranged from 49 at Cardington, to 76 at Truro; the number of days in the quarter being 90. The smallest measured rain-fall of the quarter at these stations was 6·2 inches at Cambridge, and the greatest was 18·6 inches at Allenheads.

State of the Public Health; Deaths.

During the three months ending 31st March 135,000 deaths were registered, equal to an annual rate of 22·3 per 1000 of the estimated population in the middle of the year. This rate was 2·0 per 1000 below the average rate in the corresponding period of the ten years 1867-76, and was lower than the rate which prevailed in the March quarter of any of those years, except 1868, when it did not exceed 21·9 per 1000. The average death-rate in the first quarters of the 38 years 1838 to 1875 was 24·9 per 1000; the lowest rates in those 38 winter quarters were 21·5 and 21·8 in 1846 and 1856, and the highest 28·5 and 29·1 in 1847 and 1855.

The death-rate in the first quarter of the year is mainly dependent upon the temperature, and usually bears a well defined relation to the length and severity of frost. During the quarter now under notice the lowest recorded temperature of the air at the Greenwich Observatory fell below the freezing point of water on twenty days, these twenty lowest readings showing an aggregate of 70°·2 of frost.

and an average of $3^{\circ}5$. During the three months of the severe winter of 1855 there were fifty-six frosty days with an aggregate of 405° of frost. The warmest winter quarter of recent years was that of 1872, when the thermometer fell below the freezing point of water on but twelve days, showing an aggregate of only 35° of frost; the death-rate in this warm quarter was, however, equal to 23.5 per 1000, and exceeded by 1.2 the rate which prevailed last quarter.

The 135,000 deaths included 70,268 of males, and 64,732 of females; the male death-rate was equal to 23.8, and the female rate to 20.8 per 1000 living of each sex. In equal numbers living the deaths were as 114 of males to each 100 of females. The excess of the male over the female death-rate was greater than that which prevailed in the corresponding quarter of 1876. The proportion of male to 100 female deaths was equal, last quarter, to 121 in London and to 118 in Yorkshire, whereas in the Northern counties it did not exceed 105. In Cumberland the male death-rate was lower than the female death-rate, while in Durham it was as 105 to 100. In the principally mining population of the Northern counties, the male death-rate was 0.8 per 1000 below the average rate which prevailed in the male population of England and Wales, whereas the females showed an excess of more than one per 1000. This comparatively high death-rate among the female population of the Northern counties appears to call for investigation.

In the eleven Registration Divisions the annual death-rate among persons of both sexes, ranged last quarter from 18.3 and 18.9 in the South-eastern and South-midland, to 23.6 and 26.1 in the Metropolitan and North-western Divisions. In the extra-metropolitan portion of Surrey, and in Sussex, the death-rate was only 15.8 and 17.8 per 1000, whereas it was equal to 24.6 and 26.8 in Monmouthshire and Lancashire. Notwithstanding the far greater density of population the death-rate in London last quarter was no less than 3.2 per 1000 lower than that which prevailed in the county of Lancaster; or expressed in another way, in equal numbers living, 114 persons died last quarter in Lancashire to each 100 dying in London.

In the principal urban populations of England and Wales the death-rate in the quarter was equal to 23.8 per 1000, whereas in the remaining or rural population it did not exceed 20.2; the urban rate was 2.3, and the rural rate 1.8, below their average for the corresponding period of the last ten years. The proportional decrease of mortality was greater in the urban than in the rural population. In equal numbers living the deaths last quarter in the urban were as 118 to 100 in the rural districts; the average proportion in the ten previous corresponding quarters being 119 to 100. The decrease of the excessive mortality in our larger towns appears to be lessening the difference between urban and rural death-rates.

In 20 of the largest English towns, including London, having an estimated population of about seven millions of persons, the death-rate averaged 24.2 per 1000, and exceeded the general urban rate by only 0.4 per 1000. The rates in the 20 towns ranged from 17.7 and 19.3 in Portsmouth and Brighton, to 29.8 in Manchester and Oldham, and 31.2 in Salford. The rate in the latter town is probably somewhat over-stated by an under-estimate of its population, although the exceptionally high proportion of zymotic deaths in the borough affords the strongest evidence of unsatisfactory sanitary condition. In 50 other English and Welsh town districts, with a population little short of three million persons, the death-rate averaged 23.2 per 1000, and was one per 1000 below the rate in the 20 largest towns. The lowest rates in these town districts were 13.4 in Barrow-in-Furness, 15.0 in Middlesborough, and 17.0 in Yarmouth; the highest rates were 29.1 in Wigan, 29.5 in Preston, 29.9 in Blackburn, and 30.3 in Stockport. In the remaining urban population of England, consisting of about four and a half million of persons, living principally in small towns, the average death-rate in the quarter was 23.5 per 1000, and only 0.4 below the rate in the 70 largest towns.

The 135,000 deaths at all ages included 31,749 of infants under one year of age, equal to 138 per 1000 births registered; this rate of infant mortality was 13 per 1000 below the average proportion in the seven preceding corresponding quarters. In the first quarters of the seven years 1870-6, the proportion of deaths under one year of age

to births ranged between 143 in 1873, and 167 in 1875. In the eleven Registration Divisions the rate of infant mortality, measured in this manner, did not exceed 116 and 127 in the principally agricultural population of the South-eastern and Eastern, whereas it was equal to 148 in the North-western counties of Lancashire and Chester. In the twenty large English towns the proportion of infant mortality averaged 142 per 1000, and ranged from 100 and 119 in Portsmouth and Brighton, to 163 both in Liverpool and Manchester. Lancashire maintains an unenviable notoriety for high rates of infant mortality; in the entire county the proportion of deaths under one year to births averaged 152 per 1000, whereas London, with a larger population, showing a much greater average density, it did not exceed 135. It has been stated that the rate of infant mortality in Liverpool and Manchester exceeded that which prevailed in any others of the 20 large towns; but a far higher rate prevailed in many of the smaller Lancashire towns; for instance, in Wigan, Ashton-under-Lyne, Blackburn, and Preston, the deaths under one year of age averaged 194 per 1000 of the births registered, the proportion being 197 and 199 respectively in Preston and Blackburn.

The annual rate of mortality during the quarter among children and adults aged between one and 60 years was equal to 12.5 per 1000 living at these ages, and was 1.3 below the average rate in the corresponding period of the seven preceding years. In the twenty large towns the annual death-rate between one and 60 years averaged 14.7 per 1000, and whereas it was only 10.0 in Norwich, it ranged upwards to 19.5 and 20.6 in Oldham and Salford.

Among persons aged upwards of 60 years, the annual rate of mortality averaged 78.7 per 1000 in England and Wales, against 108.3 and 82.5 in the corresponding periods of 1875 and 1876. In the first quarter of the seven years 1870-6, the death-rate among persons aged 60 and upwards averaged 87.6, and exceeded 8.9 the rate which prevailed in the three months ending March last; the lowest death-rate in these seven winter quarters among persons at these ages was 75.5 in 1872, which was 3.2 lower than that which prevailed last quarter. In the 20 towns the death-rate in the quarter among persons aged 60 years and upwards averaged 88.9 per 1000; the lowest rates were 73.1 and 74.0 in Leicester and Norwich, and the highest rates 107.6 and 125.0 in Manchester and Wolverhampton.

The unusually high temperature of December, January, and February caused the mortality during last quarter to fall considerably below the average rate for the season. The influence of the mild weather on the mortality at different groups of ages showed but slight variations. The death-rate at all ages showed a decline of 9.0 per cent. from the average rate which prevailed in the seven preceding corresponding quarters; the decline in the death-rate of infants under one year of age was equal to 8.6, and between one year and 60 the decline was 9.4, whereas among persons aged upwards of 60 years the death-rate last quarter was 10.2 per cent. lower than the average rate in the corresponding period of the preceding seven years.

ZYMOTIC DISEASES.—The 135,000 deaths from all causes during the quarter included 3618 which were referred to scarlet fever, 2596 to the three forms of fever, 2533 to whooping-cough, 1943 to small-pox, 1811 to measles, 1748 to diarrhoea, and 759 to diphtheria; in all, 15,008 deaths resulted from these seven principal zymotic diseases, equal to an annual rate of 2.5 per 1000. This zymotic rate was 0.8 below the average rate from the same diseases during the seven preceding corresponding quarters, and was lower than the rate in the first quarter of any year since 1873. The death-rate from these diseases in the agricultural counties of the South-midland and Eastern Divisions did not exceed 1.6 per 1000, whereas it was 3.2 and 3.4 in the Metropolitan and North-western Divisions. The zymotic rate was only 1.1 in Sussex and 1.2 both in Cambridgeshire and Suffolk, whilst it was equal to 3.2 in Cheshire and Monmouthshire, 3.4 in Staffordshire, and 3.5 in Lancashire. In the twenty large towns the rates from these diseases averaged 3.3 per 1000, and whilst it was but 0.8 and 1.2 in Brighton and Nottingham, it ranged upwards in the other towns to 4.1 and 5.6 in Manchester and Salford. In the 50 other large town districts the zymotic rate averaged 2.8 per 1000, and was

slightly below that which prevailed in the 20 larger towns; the zymotic rate was but 0·7 and 1·0 in Yarmouth and Middlesborough, whereas it was 4·0 in West Bromwich, 4·8 in Stoke-upon-Trent, 5·2 in Newport (Monmouthshire), and 5·5 in Wigan. Scarlet fever, measles, and enteric fever were the principal causes of the high zymotic mortality in these four last-mentioned towns.

Scarlet fever continues to show a higher rate of mortality in England and Wales than any other of the seven principal zymotic diseases; the deaths, however, from this disease were, as is usual in this quarter, less numerous than in the preceding three months, and were equal to an annual rate of 0·60 per 1000, whereas in the seven preceding corresponding quarters the annual death-rate from scarlet fever had averaged 0·83. Compared with the fatal cases returned in the last quarter of 1876 the deaths from this disease showed an increase only in the counties of the Northern Division; a marked decline occurred in London. The death-rate from scarlet fever was but 0·22 and 0·23 in the Eastern and South-midland Divisions, whereas it ranged upwards to 0·90 and 0·94 in the West-midland and Northern counties. The counties of Hertford and Suffolk were remarkably free from scarlet fever fatality, while the death-rate from this disease exceeded 1·3 per 1000 in Durham, Wiltshire, and Staffordshire. In the twenty largest towns the rate of mortality from scarlet fever averaged 0·47 per 1000: Nottingham was comparatively free from the disease, whereas the rate was equal to 1·03 in Oldham, 1·31 in Wolverhampton, and 1·93 in Sunderland. The rate in Portsmouth, which had been equal to 5·3 and 3·9 in the two preceding quarters, further declined to 0·82, and the epidemic prevalence of the disease in Leicester had all but disappeared. Among the other large town districts a considerable fatality from scarlet fever prevailed in Stoke-upon-Trent, Southampton, Cheltenham, Walsall, Wigan, Bolton, Huddersfield, and Halifax. Among other localities in which the disease showed fatal prevalence during the quarter may be mentioned:—Gravesend, Warminster, certain portions of Gloucester and Hereford, Cannock, Nantwich, Selby, Hetton-le-Hole, Usworth (Chester-le-street), and Pembroke. During the nine months ending March last, within the registration sub-district of Pembroke, having a population of about 15,000 persons, no less than 122 deaths from scarlet fever were registered, equal to an annual rate of 11 per 1000. Such exceptional fatality suggests the desirability of a thorough investigation of the sanitary condition of this borough.

The continued decline in the mortality from *fever* affords satisfactory evidence of the benefit to public health resulting from the improving sanitary organisation of the country. The 2596 deaths referred to fever, including typhus, enteric or typhoid, and simple or undistinguished forms of fever, during the first three months of this year were equal to an annual rate of 0·43 per 1000 persons living; in the seven preceding corresponding quarters the death-rate from fever averaged 0·60 per 1000, and had declined from 0·75 in the first quarter of 1870, to 0·45 in the corresponding period of 1876. The fatality of fever last quarter was, therefore, 28 per cent. below that which prevailed in the March quarters of the seven years 1870–6, and it is fair to assume that the cases of attack showed a decline equal to that of the fatal cases. The fever rate in the principally agricultural population of the Eastern and South-midland Divisions did not exceed 0·24 and 0·26 respectively, whereas it was equal to 0·59 and 0·67 in the Northern and North-western Divisions, where the population is mainly employed in mining and manufacture. The fatality of fever was especially low in Dorsetshire, Bedfordshire, Suffolk, and Wiltshire, while it was equal to 0·67 in the West Riding of Yorkshire and in Durham, and 0·72 in Lancashire. In the twenty large English towns the fever rate last quarter averaged 0·44 per 1000; it did not exceed 0·12 and 0·24 in Brighton and Leicester, while it ranged upwards to 0·79 in Portsmouth, 0·80 in Salford, and 1·04 in Liverpool. The death-rate from fever again exceeded one per 1000 in West Bromwich. Fever, principally enteric or typhoid, showed exceptional fatality in Market Drayton, Ashton-in-Makerfield, Batley, Dewsbury, Selby, Prudhoe (principally in the mining village of West Wylam), Ystradlyfodwg, and in the parish of Llanfihangelaberbythych (Carmarthenshire).

The 2533 deaths from *whooping-cough* were equal to an annual rate of 0·42 per 1000, a lower rate than prevailed from this disease in the corresponding quarters of any of the seven preceding years during which the average annual rate from whooping-cough was 0·64. This marked decline in the fatality of whooping-cough was probably in great measure due to the mildness of the winter. The disease, however, showed unusual fatality in Wolstanton, Ashover, and Warrington.

The fatal cases of *small-pox* which were but 149 in the last three months of 1875 steadily increased throughout the four quarters of 1876 and numbered 1112 in the last three months of that year. The deaths referred to this disease in the three months ending March last further increased to 1943, of which 1331 occurred in London and its suburban districts, 406 in Lancashire, and 61 in Cheshire, whereas but 10 were recorded in the remaining portions of England and Wales. The annual death-rate from small-pox during the quarter, to a million living was equal to 122·33 in Greater London, 528 in Lancashire, and 423 in Cheshire, whereas it did not average more than 36 per million in the rest of England and Wales; the rate in Lancashire differed but slightly from that which prevailed in the last quarter of 1876, whereas it showed a marked increase in London and Cheshire. No fatal case of small-pox was registered in twelve English counties or in ten of the twenty largest towns, among which the prevalence of the disease was confined to London, Liverpool, Manchester, and Salford. The disease caused 46 and 32 deaths in the districts of Birkenhead and Preston, 13 in Rochester and Chatham, and 1 in Dartford. Local outbreaks also occurred at St. Peters (Isle of Thanet), Hungerford, and Berkhamstead, and eight fatal cases were again recorded at Ludlow.

The 1811 fatal cases of *measles* were equal to a rate of 0·30 per 1000 which was slightly below the average rate from this disease in the seven preceding corresponding quarters. The disease was especially prevalent in Leicestershire, Westmorland, and in the following of the twenty largest towns;—Norwich, Leicester, Manchester, Salford, and Hull. Measles also showed excessively fatal prevalence in Cookham, Chesham, Hinckley, Ashover, the district of Wigan, Bath, Scarborough, Marske and Lofthouse, Durham, the district of Kendal, and Newports (Monmouth).

The death-rate from *diarrhœa* was lower than in the corresponding quarters of any of the seven preceding years.

The 759 deaths from *diphtheria* showed a decline from the numbers returned in the first quarters of 1874-5-6, and were equal to an annual rate of 0·13 per 1000. The fatality of diphtheria is almost invariably higher in rural than in urban populations, and in this respect differs from that of the other principal zymotic diseases. In the twenty large English towns the rate last quarter did not exceed 0·09 per 1000, (although it was unusually high in Sheffield,) whereas it averaged 0·13 in the rest of England and Wales. The disease showed fatal prevalence in Rolvenden (Kent), East Grinstead, Stansted (Bishop Stortford), Padstow, Burton-upon-Trent, Wilmslow, and Frodsham (Cheshire), Didsbury (Manchester), Todmorden, Mordun (Dewsbury), Ecclesall Bierlow (Sheffield), Llanfairarybryn, and Abergele.

DISEASES OF ANIMALS.—Animals in one respect at least resemble men; they are subject to zymotic diseases which it is important to note in order to determine what relation there is between the epidemics of men and the epizootics of animals. The importance of the latter is the greater, where, as in England, flesh and milk are largely consumed as food. Are the diseases of men and animals intercommunicable? Does the flesh, tainted by cattle plague and pleuro-pneumonia, cooked or uncooked, at any stage disturb the health in any way of the eaters? That infected milk transmits enteric fever is established beyond doubt by the researches of Dr. Murchison and Dr. Ballard; glanders, hydrophobia, and cow-pox are communicated directly from man by animals.

Cases of pleuro-pneumonia, glanders, and farcy have been returned by the Veterinary Department of the Privy Council in certain numbers in every week since the beginning of the year. In the third week of January, 39 foreign cases

landed at the Port of London were attacked by cattle plague; 26 died and 13 were killed. Every week since a few new cases have occurred, and the animals have died or been killed under the notion that the disease can be stamped out. In a few counties other cases have been reported. Medical observers will watch carefully the effects on the public health. Pleuro-pneumonia has been still more common and fatal, and considerable numbers of the affected animals have been killed.

INSTITUTIONS.—In workhouse establishments, hospitals, and public lunatic asylums 13,509, or 10·0 per cent. of the deaths, were registered during last quarter; this proportion exceeds that which prevailed in any quarter since the second of 1871, and was 0·8 above the average per-centage in the corresponding periods 1870–76. In the twenty large English towns 7048 deaths were recorded in public institutions, equal to 16·6 per cent. of the total deaths; the per-centage ranged from 6·6 in Oldham, to 19·2 and 20·4 in Wolverhampton and London. Excluding the twenty large towns, the average proportion of institution deaths last quarter was 7·0 per cent.

VIOLENT DEATHS.—The 4202 deaths referred to different forms of violence, were equal to 0·69 per 1000 persons living, corresponding with the rate in the preceding quarter. In the agricultural population of the Eastern and South-midland Divisions the death-rate from violence was but 0·44 and 0·46 per 1000, whereas it was equal to 0·81 in London, and to 0·94 in Lancashire where the population is principally engaged in mining and manufacture. In the twenty large towns the death-rate from violence averaged 0·81 per 1000, and ranged from 0·33 and 0·44 in Plymouth and Portsmouth, to 1·15, 1·21, and 1·23 respectively in Wolverhampton, Birmingham, and Liverpool.

INQUESTS.—During the first three months of this year, 6795 deaths were registered from the certificates of coroners, equal to 5·0 per cent. of the total deaths, showing a slight excess upon the average in the corresponding quarters of the past seven years. In the twenty large towns the per-centage averaged 6·2, and ranged from 2·4 and 3·2 in Sheffield and Bristol, to 9·0 in Birmingham and Leicester, and 9·4 in Manchester. In an equal number of deaths nearly four times as many inquests are held in Manchester as in Sheffield; and whereas the inquest cases in Sheffield only exceeded the deaths from violence by 18 per cent.; the inquests held in Manchester exceeded the number of deaths referred to violence by 184 per cent., or were nearly as three to one. It cannot be unimportant to decide whether too few inquests are held in Sheffield, or whether they are unnecessarily numerous in Manchester.

HEALTH OF FOREIGN CITIES.

A summary of the weekly returns with which the Registrar General is favoured by various local authorities abroad shows that the average annual death-rate during the first three months of this year, in twenty-eight Indian and Foreign cities, having an estimated population of more than 11,000,000 of persons, was 30·8 per 1000, against 24·2 in twenty of the largest English towns. Excluding Madras, where the rate was so exceptionally high, the death-rate in the other cities averaged 27·9 per 1000. Among these 28 towns the lowest recorded death-rates during the quarter were 18·1 and 19·8 in Philadelphia and Boston; whereas the rates ranged upwards in the other towns to 38·1 in Naples, 44·9 in Bombay, 45·8 in Alexandria, and 112·8 in Madras. In the thirteen weeks taken to represent the quarter, of 11,169 deaths registered in Madras 3386 resulted from cholera, and 1552 from small-pox; the Medical Officer of Health for Madras refers the exceptional mortality in that city from zymotic diseases to overcrowding caused by the immigration of large numbers from neighbouring famine-stricken districts. Cholera caused 573 deaths in Calcutta and 161 in Bombay, the deaths from small-pox in those cities being respectively 26 and 369. In Paris the death-rate was equal to

28·3 per 1000, and exceeded that which prevailed in London by 4·7; the fatality of typhoid fever showed a considerable decline from that in the last quarter of 1877 although 386 deaths were referred to this disease. Small-pox showed more or less fatal prevalence in Paris, Brussels, and Vienna. Diphtheria and typhus conduce to the high death-rate in Naples, and whooping-cough was fatally prevalent in Alexandria. Diphtheria caused proportionally large numbers of deaths in most of the German, Italian, and American cities; in most of the German and Italian returns the deaths from diphtheria and croup are returned under the same heading. Although the death-rate in Philadelphia was so exceptionally low, 121 deaths were referred to typhoid fever against 250 in the preceding three months.

PRELIMINARY TABLES.

Note.—The three months January, February, March, contain 90, and in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction is made in calculating the rate of mortality in the different quarters of the year. The annual rate is the mean of the four quarterly rates.

TABLE VI.—Population; Births, Deaths; Mean Temperature and Rainfall; in the First Quarter of 1877, in Twenty-three Large Towns.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns are the numbers enumerated in April 1871, raised to the middle of 1877 by the addition of six and a quarter years' increase, calculated on the rate which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE VII.—Deaths in 20 large English Towns in the 13 Weeks ending 31st March
(Estimated aggregate population in middle of 1877, 7,055,612; viz., 3,533,484 in London, and 3,522,128 in the 19 other Towns; see note to Table VI.)

588	Swansea - - - M -	74,246	819	406	44·7	22·2	2·8	{ Llangafelach, Swansea, and Llan- samlet Sub-districts.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District.

* For method of framing these estimates see note * to Table VI. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley, Coventry, Wigan, and Barrow-in-Furness have been based upon local information as to the increase of the inhabited houses in these boroughs.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situate outside that area.

ROMFORD (<i>part of</i>) - - -	16,783	175	76	7	41·8	18·2

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1871 and 1876; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated population of the Outer Ring, obtained in the manner above described. A proportion of the deaths recorded in the Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring.

TABLE XI.—**Births and Deaths in the First Quarter of 1877 in 28 Foreign Cities.**

TOWNS.	POPULATION (enumerated or estimated).	BIRTHS.	DEATHS.	ANNUAL RATE per 1000 Persons living.		DEATHS FROM EPIDEMIC DISEASES.
				Exclusive of Stillborn.	Births. Deaths.	
CALCUTTA - - -	429,535	-	3289	-	30·7	Cholera 573 ; small-pox 26.

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page

NOTE.—The Registrars alone must be considered responsible for the correctness of their returns, and for the opinions expressed in them respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND. of INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also INQUEST CASES and in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and of ENGLAND.

^a The Superintendent Registrars' Districts are collections of contiguous Parishes or Places, nearly always identical with the Unions of the same names; they are 632 in number, and are here arranged topographically under the Registration Counties.

^b These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space by foreshore or tidal water of rivers and creeks.

^c See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS—continued.

Superintendent Registrars' Districts.		Area in Statute Acres.	Enumerated Population, 1871.	Mar- riages	Births	Deaths		The DEATHS in the Quarter are stated by the Registrars to include

* The present number of Superintendent Registrars' districts is 632. The above numerical arrangement—1 to 627—was adopted on 1st January 1871. Six new Superintendent Registrars' districts, viz., Fulham (1a), Prestwich (467a), Barrow-in-Furness (481a), Middlesbrough (532a), Lanchester (546), and Pontardawe (587a), have been constituted; and Shrewsbury (352) has been incorporated with Atcham (351).

^a The Sub-districts (2189 in number) are sub-divisions of Districts in which the Births and Deaths are registered by Registrars appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

^b For London the numbers of Births and Deaths, as well as the details given, "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from December 1876 to 31st March 1877.

NOTE.—The Registrars alone must be considered responsible for the correctness of their returns, and for the opinions expressed in the notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c., &c.

- 40: 2.—The 4 deaths from fever were described as typhus.
 41: 2.—There have been 16 cases of small-pox in the village of Effingham, supposed to have been imported by the casual visit of a man infected with the disease. In the town of Dorking there have been 2 or 3 cases imported from London.
 42: 1.—Of the 71 deaths in Public Institutions, 68 occurred in the Metropolitan District Asylum for imbeciles.
 43: 1.—Only one of the above 17 deaths from small-pox was registered during the month of March.
 44: 1.—There have been 27 cases of small-pox, 3 were fatal, but 2 occurred in the Dartford Workhouse Infirmary.
 45: 2.—Of the 12 deaths from small-pox (9 of which occurred in Dartford), 5 were of persons who had not been vaccinated, 2 were vaccinated, and 5 were not stated as to vaccination.
 46: 1.—The death from small-pox occurred to a person who contracted the disease at Chatham; successful measures prevented its spreading. Only 8 of the 37 deaths from scarlet fever were registered in March.
 47: 1.—Of the 10 deaths from scarlet fever, 8 occurred in Northfleet and 2 in Denton.
 48: 2.—Of the 5 deaths from small-pox, 2 occurred in Strood, 2 in Cliffe, and one in Lower Upnor; there are several cases in various parts of the sub-district; scarlet fever is abating.
 49: 1.—The registrar states he is not aware of any further case of small-pox existing in his sub-district.
 50: 2.—Of the 5 deaths from small-pox, 3 were of vaccinated persons, and 4 were not reported as to vaccination; only one of the deaths was registered in March.

^a 46 : 1.—There have been several cases of small-pox, one of which terminated fatally in the Malling Union Workhouse.

^b 48 : 2.—Three of the 4 deaths from diphtheria occurred in the same house in High Street, Tunbridge.

^c 52 : 1.—The Registrar says if the Biddenden schools had been sooner closed, he thinks the spread of diphtheria might have been prevented.

^d 59 : 1.—There have been 4 cases of small-pox in Upchurch, the disease was contracted at Chatham. In the parish of Ramsgate have also been 4 cases.

^e 61 : 2.—There have been 4 cases of small-pox distinctly traced from the neighbouring parish of St. Peters. Vaccination enforced at Margate, and the Registrar says his sub-district has been very healthy.

^f 61 : 3.—No death from small-pox was registered in March, and of the 7 which occurred previously, 4 were of unvaccinated persons.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

a 98: 2.—The death from small-pox occurred on the 26th January, and is reported to have been brought from London.
 b 106: 1.—There have been 3 or 4 cases of small-pox, all imported: but the sub-district is now free from the disease.
 c 107: 1.—Two other cases of small-pox have occurred, but the patients are progressing favourably.
 d 109: 3.—There have been 8 other cases of small-pox in one family, all of whom recovered; the prompt action of the authorities prevented the disease from spreading further.

129: 3.—Of the 14 deaths from small-pox, 13 occurred in the Edmonton Union Workhouse. No information was given on the medical certificates as to vaccination.

130: 3.—There are no more cases of small-pox existing.

130: 2.—The last death from diphtheria occurred on the 23rd February.

131: 3.—The Registrar believes his sub-district to be now perfectly free from small-pox.

132: 1.—The death from small-pox occurred in the parish of Bygrave; the disease was imported from London.

136: 2.—There are 7 other cases of small-pox, the majority progressing favourably.

137: 1.—A child died from small-pox who was brought from a house in Finchley where the disease prevailed.

137: 2.—There have been 16 cases of small-pox.

138: 1.—Of the 8 deaths from small-pox, 6 were of unvaccinated persons.

a 193 : 5.—There have been 8 cases of small-pox, the disease was imported from London ; revaccination is being actively resorted to.

b 194 : 1.—Five cases of small-pox have occurred in the parish of Weeley, where one proved fatal.

c 194 : 4.—The ages of 8 of the persons aged 60 years and upwards, whose deaths were registered, averaged 83 years.

d 195 : 1.—Both deaths from small-pox occurred in the fever ward of the Union Workhouse, where there are 4 other cases.

e 196 : 2.—Of the 5 deaths from diphtheria, 4 were of one family.

f 197 : 3.—The 4 deaths from diphtheria occurred in Great Coggeshall, 2 in January and 2 in February.

g 199 : 2.—There are no further cases of small-pox.

h 200 : 3.—Small-pox is prevalent in the parishes of Hatfield and White Roothing.

i 201 : 3.—Of the 5 deaths from diphtheria, 4 occurred in the parish of Radwinter.

j 203 : 2.—There were 3 other cases of small-pox in the parish of Nayland and one in Assington, but the sub-district is now free from disease.

k 203 : 3.—There have been 11 cases of small-pox in the town ; the disease was imported from London.

l 204 : 2.—The death from small-pox occurred at the Union Workhouse ; the patient was brought from the Lavenham sub-district.

a 255 : 1.—The Registrar says his sub-district is now quite free from scarlet fever.

b 261 : 2.—The 2 deaths from scarlet fever occurred in one house; the Registrar says there are no further cases.

c 262 : 1.—No death from scarlet fever was registered in March, and the Registrar believes the disease has abated.

d 265 : 3.—Of the 6 deaths from scarlet fever, 5 were registered in February; there are no cases remaining.

e 265 : 4.—Small-pox was imported from London, and there have been 5 cases, but the Registrar believes the Board of Guardians took great precautionary measures to prevent the spread of the disease.

f 266 : 2.—There have been 2 more deaths registered from scarlet fever during the early part of April.

V.—SOUTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

^a 364: 1.—Of the 39 deaths from scarlet fever, 13 were registered in January, 9 in February, and 17 in March.

^b 364: 2.—Nearly half the deaths from scarlet fever were registered in January.

^c 364: 4.—Nine of the deaths from scarlet fever were registered in March.

^d 366: 3.—The 5 deaths from scarlet fever occurred in the parish of Caverswall.

^e 370: 1.—The death from small-pox occurred in Hammerwich; the disease has not spread. The deaths from scarlet fever occurred

^f 371: 3.—Of the 34 deaths from scarlet fever, 20 were registered in January.

^g 372: 4.—Scarlet fever is considerably abating.

^h 373: 6.—Twenty-six of the deaths from scarlet fever were registered in March.

ⁱ 374: 2.—The Registrar states that the existence of zymotic diseases is no doubt due to imperfect drainage; but the Local Board authorities are taking steps to remedy the evil.

^j 374: 3.—Of the 13 deaths from fever (5 of which occurred in Lyttleton Street), 12 were described as typhoid or enteric, and one as relapsing fever.

^a 447 : 1.—The 3 deaths from scarlet fever occurred in Northenden. Of the 19 deaths from diphtheria, 3 occurred in the town of Bollin, 2 in Fulshaw, 8 in Northern Etchells, and 6 in Pownall Fee.

^b 447 : 2.—Of the 9 deaths from small-pox, 5 were registered in February, and 3 in March; 3 deaths were of vaccinated, and 3 of unvaccinated persons.

^c 448 : 3.—The 5 deaths from scarlet fever occurred in Runcorn.

^d 448 : 4.—Of the 5 deaths from diphtheria, one occurred at Newton, 2 at the Bridge, Frodsham, one in Main Street, Frodsham, and one at Kir.

^e 449 : 2.—There have been other cases of small-pox, but the patients have recovered, and the Registrar is not aware of any fresh cases.

^f 450 : 3.—The death of an infant from small-pox was followed by 7 other cases of a modified character, but no further deaths have occurred.

^g 451 : 1.—Of the 23 deaths from scarlet fever, 8 were registered in January, 9 in February, and 6 in March.

^h 451 : 2.—Of the 39 deaths from scarlet fever, 9 were registered in January, 17 in February, and 13 in March.

ⁱ 452 : 2.—There have been 4 other persons attacked with small-pox, but they are in the hospital and recovering.

^j 454 : 1.—Of the 21 deaths from small-pox (13 of which were registered in March), 14 were not reported as to vaccination.

^k 454 : 2.—Of the 22 deaths from small-pox, 20 occurred in the Union Hospital; of these 20 cases, 18 were brought from Birkenhead, and 2 from the hospital.

^l 455 : 5.—Of the 5 deaths from small-pox, 4 were of infants under six months of age, 2 of whom had not been vaccinated.

^m 455 : 6.—An arrangement appears to exist between the vestry of Liverpool and the Guardians of West Derby, by which West Derby cases are sent to Liverpool Workhouse, and Liverpool small-pox cases go to West Derby in exchange.

ⁿ 456 : 2.—Of the 120 deaths from small-pox (34 of which occurred in private houses), 17 were of vaccinated persons, 31 had not been vaccinated, and 72 were not reported as to vaccination. See previous note 455 : 6.

a 457 : 5.—The 4 deaths from small-pox were of unvaccinated persons.

b 458 : 3.—The 3 deaths from small-pox occurred in the same locality, which is now free from the disease.

c 458 : 5.—The whole of the deaths from fever occurred within the borough of Stockport.

d 458 : 7.—The Registrar is not aware of any further case of small-pox. The 4 deaths from fever were described as typhoid.

e 458 : 8.—The Registrar says there are some few cases of small-pox still under treatment.

f 458 : 9.—The 2 deaths from fever were described as typhoid, and occurred at Bispham.

g 459 : 4.—Of the 21 deaths from scarlet fever, 12 were registered in March; all of which occurred in the township of Hindley.

h 459 : 7.—Of the 6 deaths from fever, 3 were described as typhoid or enteric, and 2 as simple continued.

i 463 : 4.—Small-pox broke out at a farm house, when most of the family took the disease, but only one died.

j 463 : 5.—The Medical Officer of Health is not aware of any further attacks from small-pox.

a 464 : 2.—There were about 8 cases of small-pox existing, and the Registrar believes the disease was introduced from Salford.

b 465 : 1.—The Registrar believes every precaution to have been taken to prevent the spread of diphtheria.

c 465 : 4.—Two children and an adult died from small pox. Of the 13 deaths from fever, 10 were described as typhoid.

d 467a : 1.—Of the 51 deaths from small-pox, 44 died in the Monsall Fever Hospital, which receives cases from the city and sub-Manchester; of these 44 persons, 13 had been vaccinated, 12 had not been vaccinated, and 13 were not reported as to vaccination.

e 468 : 4.—The Registrar says his sub-district is now quite free from small-pox.

f 468 : 7.—The death from small-pox occurred at Hurst.

g 469 : 1.—There were 15 other cases of small-pox within the municipal borough.

h 469 : 4.—There have been no further attacks from small-pox.

^a 472: 1.—Of the 6 deaths from small-pox, 3 were of unvaccinated persons and 3 were not reported as to vaccination. Half of the deaths from scarlet fever occurred in February.

^b 472: 3.—Of the 12 deaths from fever, 7 occurred in Barrowford, 4 in Marsden, and one in Colne.

^c 474: 4.—Blackburn is quite free from small-pox.

^d 474: 6.—Half the deaths from scarlet fever were registered in March.

^e 476: 2.—Of the 23 deaths from small-pox, 9 were registered in January, 11 in February, and 3 in March; 10 deaths were of vaccinated, 8 of unvaccinated persons, and 5 were not stated as to vaccination.

^f 476: 3.—There have been 4 other cases of small-pox, but the patients are recovering.

^g 476: 5.—There are several cases of small-pox at the Fullwood Workhouse.

^h 477: 3.—The death from small-pox occurred in the township of Marton.

ⁱ 478: 3.—There have been 11 cases of small-pox, 9 of which were certified as modified; notices as to times and places for revaccination have been published.

^j 479: 3.—The death from small-pox occurred in January; there were about 50 cases, but by the exertion of the Lancaster sanitary authority the disease was entirely stamped out.

a 501: 1.—Of the 6 deaths from diphtheria, 3 occurred in High Street and 2 in Troy Road. The ages of the 15 persons aged 60 years upwards, whose deaths were registered, averaged 73 years.
b 501: 2.—The prevalence of measles, typhus, and typhoid fevers partly account for the high number of deaths.
c 501: 6.—Of the 27 deaths from fever, 24 were described as typhus, typhoid or enteric.
d 505: 4.—The Registrar says there is no further case of small-pox.
e 507: 4.—Of the 13 deaths from diphtheria, 8 were registered in February, and 4 in March.
f 508: 1.—The death of a female was registered whose age was stated to be 106 years.

588: 1.—The 2 deaths from typhoid fever occurred in the hamlet of Higher Swansea.

588: 3.—There are a few cases of small-pox existing, but the patients are progressing favourably.

591: 6.—The 4 deaths from diphtheria occurred in the hamlets of Rhandir Ucha and Rhandir Canol.

592: 2.—The last death from small-pox occurred in January, since which the disease has entirely disappeared. The death of a person was registered whose age was stated to be above 101 years.

592: 5.—The 8 deaths from fever were described as typhoid or enteric, and occurred within the parish of Llanfihangelaberbythych.

595: 2.—Of the 27 deaths from scarlet fever, 17 were registered in January, 3 in February, and 7 in March.

595: 3.—Of the 12 deaths from scarlet fever, 8 occurred in Llanedadwell, and 4 in Burton.

a 622 : 2.—Of the 10 deaths from scarlet fever, 3 were registered in January, 3 in February, and 4 in March.
b 624 : 1.—Four deaths from typhoid fever occurred in the parish of Llanllyfai.
c 625 : 1.—The death of a female was registered whose age was stated to be above 101 years.
d 627.—See page 13, note a.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING MARCH 31ST, 1877.

By JAMES GLAISHER, Esq., F.R.S., &c.

The weather during the quarter has been for the most part exceptional, the readings of the barometer have been usually below their averages, with frequent stormy weather, the temperature of the air was high both in January and February, rain fell almost continuously and was excessive in January, and there has been very little sunshine throughout the quarter.

The high temperature which set in on November 13th, 1876, and continued with the exception of six days in December, till the end of the year, was also prevalent throughout January and until the 19th of February 1877, the average daily excess of temperature for the 50 days beginning January 1st and ending February 19th was $6^{\circ}\cdot 1$; and for the 99 days beginning November 13th and ending February 19th was $5^{\circ}\cdot 1$, the winter, therefore, of the year 1876-7 has been exceptionally mild. On February 20th a period set in, which was distinguished by several days of temperature below their averages, and then followed by a smaller number of days of temperature above their averages, and this variation of temperature, alternately warm and cold, continued till March 23rd, the average daily deficiency of temperature for the 26 days ending March 23rd was $2\frac{1}{2}^{\circ}$. From March 24th to the end of the quarter the weather was uniformly warm, and the average daily excess was $2^{\circ}\cdot 9$.

The fall of rain in January was excessive, at about London and its neighbourhood it fell during the first half of the month on nearly every day, and during the whole of the month it fell on 6 days out of 7 days. The amount at Greenwich was 4.35 ins.; back to the year 1815 we have no instance of so large a fall of rain in January, and but two instances which are closely approximate, viz., in the year 1828 when the fall was 4.3 ins., and in the year 1868 when it was 4.2 ins. The average rainfall of 62 Januaries is 1.85 in., so that more than double the average fell in January; this is the more remarkable as the fall in December 1876 was so excessive.

The fall of rain in the three months ending January was 13.20 ins., being more than half the mean annual fall of 62 years, viz., 25.2 ins. The average fall for the three successive months, November, December, and January, is 6.24 ins., therefore for these months the fall of rain has exceeded in amount twice the average fall.

FALL OF RAIN at the different STATIONS on Twelve selected days.

The fall of rain in January was large everywhere, and it fell on every day in the month, one or other place, the day of least fall was the 22nd, on which day it fell at a few places and to a small amount; on the 12th, 13th, 23rd, and 26th the falls were less than a $\frac{1}{4}$ inch, all the other days the falls exceeded a $\frac{1}{4}$ of an inch at one or more places; on the 3rd, 4th, 6th, 7th, 8th, 10th, 11th, 17th, 19th, 20th, and 30th, the fall at one or more stations was nearly one inch or it exceeded one inch. The Table at foot of preceding page shows falls of rain on these 12 days at the several stations.

The heavy rainfall at the end of December and at the beginning of January caused floods generally.

The readings of the barometer in the neighbourhood of London were below their respective averages from the 1st to the 8th of January to the mean amount of 0.64 in. daily; from the 9th to the 19th, the readings were alternately above and below their average values; from the 20th to the end of the month the readings were above their averages, with the exception of two viz., 25th and 30th, which were 0.22 in. and 0.41 in. below. The mean reading for the month was 29.665 ins. being 0.085 in. below the average. The greatest departure in defect of average during the month was 1.04 in. on the 1st. During the first nine days of February the readings of the barometer were all above their averages; from the 10th to the 27th they were below with the exception of three days, viz., 14th, 17th, and 18th, which were respectively 0.02 in., 0.07 in. above their averages; on the last day of February the reading of the barometer was 0.25 in. above the average. The mean reading for the month was 29.751 ins. being 0.043 in. below the average. From the 1st to the 3rd of March the barometer readings were above their average values, from the 4th to the end of the month they were all below, except on three days, viz., 10th, 11th, and 31st, which were 0.01 in., 0.13 in., and 0.15 in. respectively above their averages; the mean amount in defect of the average for these 28 days was 0.3 in. The mean reading for the month was 29.569 ins., being 0.172 in. below the average.

At Greenwich the mean temperature of January was 1.4 below that of December; that of February was 0.8 above that of January; and that of March was 2.8 below that of February. (From the preceding 36 years' observations the mean temperature of January below that of December is 1.5 ; that of February above that of January is 0.6 ; and that of March above that of February is 2.5 .)

The mean temperature of the air for January below that of December over the whole country was very nearly alike, and averaged 1.3 ; that of February above that of January was nearly the same everywhere, the average being 1.1 ; and that of March below that of February was nearly uniform, and averaged 2.8 .

The mean temperature of the air for January was 42.7 , being 6.2 and 4.1 above the averages of the preceding 106 years, and 36 years respectively. In the preceding 106 years there are but 5 instances of so high a mean temperature for the month of January, viz.:—

In 1796 it was 45.3	In 1846 it was 43.7
1804 „ 43.2	1875 „ 43.4
1834 „ 44.4	

The mean temperature of the air for February was 43.5 , being 4.9 and 4.3 above the averages of the preceding 106 years, and 36 years respectively. In the preceding 106 years there are only 8 instances of so high a mean temperature for the month of February, viz.:—

In 1779 it was 45.3	In 1850 it was 44.7
1794 „ 44.7	1867 „ 44.7
1809 „ 44.1	1869 „ 45.3
1846 „ 43.9	1872 „ 44.8

The mean temperature of the air for March was 40.7 , being 0.4 and 1.0 below the averages of the preceding 106 years, and 36 years respectively; it was higher than the value of 1874 and 1876 by 3.0 , and 0.4 respectively; but 0.5 above that in 1875.

The mean temperature of the air for the quarter was 42.3 , being 3.6 and 2.5 above the averages of the preceding 106 years, and 36 years respectively. In the preceding 106 years, there are but 6 instances of so high a mean temperature in the quarter, viz.:—

In 1779 it was 42.4	In 1846 it was 43.6
1822 „ 43.5	1863 „ 42.6
1834 „ 42.9	1872 „ 43.6

The mean high day temperatures of the air were respectively 4.7 and 3.8 above the averages in January and February; but 1.4 below in March.

The mean low night temperatures of the air were respectively 3.1 and 4.2 higher than their averages in January and February; but 0.7 lower in March. Therefore the days and nights were warm in January and February, but somewhat cold in March.

The mean daily ranges of temperature were respectively 0.4 , and 0.6 below their average in February and March, but 1.6 above in January.

At Greenwich the atmospheric pressure in January was greater than in December by 0.354 in. in February greater than in January by 0.086 in., and in March less than in February by 0.182 in. (From the preceding 36 years' observations the mean pressure in January is less than in December by 0.055 in., that in February greater than in January by 0.044 in., and in March less than in February by 0.053 in.) The mean increase of pressure from December to January south of latitude 51° was 0.392 in., between $51\frac{1}{4}^{\circ}$ and 52° it was 0.352 in., between 52° and $53\frac{3}{4}^{\circ}$ it was 0.325 in.; and north of 54° was 0.275 in. The mean increase of pressure from

January to February, south of latitude 51° was 0.175 in.; and north of $51\frac{1}{4}^{\circ}$ it was 0.093 in. The mean decrease of pressure from February to March, south of latitude $51\frac{1}{4}^{\circ}$ was 0.222 in., between $51\frac{1}{2}^{\circ}$ and 52° it was 0.171 in., between $52\frac{1}{4}^{\circ}$ and $53\frac{3}{4}^{\circ}$ it was 0.134 in., and north of this parallel was 0.102 in.

The plus sign (+) denotes excesses over averages; in the month of January the largest numbers affected with this sign are opposite to the S. and W., in February to the S.W., W., and N.W., and in March to the N.W.

The minus sign (−) denotes defects below averages; in the month of January the largest numbers affected with this sign are opposite to the N. and S.W., in February and March to the N.E. and E.

Thunderstorms occurred on 6 days in January, 3 days in February, and on 6 days in March.

Thunder was heard on 3 days in January, 1 day in February, and on 3 days in March.

Lightning was seen on 7 days in January, 1 day in February, and on 2 days in March.

Solar halos were seen on 19 days during the quarter.

Lunar halos were seen on 24 nights during the quarter.

Aurora borealis was seen on the 23rd of January at Guernsey.

Snow fell on 14 days in January, 11 days in February, and on 17 days in March.

Hail fell on 43 days during the quarter.

Fog prevailed on 19 days in January, 8 days in February, and on 18 days in March.

NOTE.—The Barometer Reading, GLOUCESTER, 1st January, 9h. a.m., 29.668 in., has been altered to 28.668 in. CHISWICK, 1st " 4h. p.m., 29.946 in., " 28.946 in. N. SHIELDS, 1st " 9h. a.m., 29.746 in., " 28.746 in. LLANDUDNO, 4th " 2h. p.m., 29.82 in., " 28.82 in. LEEDS, 4th " 9h. a.m., 29.970 in., " 28.870 in. ALLENHEADS, 30th " 10h. a.m., 29.987 in., " 28.987 in. HELSTON, 15th February, 3h. p.m., 28.942 in., " 27.942 in. RAMSGATE, 9h. a.m., 30.836 in., " 29.836 in. LLANDUDNO, 25th March, 6h. a.m., 29.898 in., " 28.898 in. GLOUCESTER, 23rd January, 9h. a.m., 48.8 " 43.8

NOTE.—Holkham, the readings of the minimum thermometer appear too low, and have not been used in deducing the mean temperature and hygrometrical results. Leeds, the fall of Rain in the months of January and February appear small.

Second Rain-gauges are placed—

At Stratfield Turgiss, at the height of 38 feet above the ground, the amount collected was 2.87 inches.	January.	February.	March.	Total during the Quarter.
Oxford, 22 feet	4.30 "	0.97 inches.	1.73 inches.	5.57 inches.
" 36 feet	2.70 "	1.36 "	1.82 "	7.48 "
" 36 feet	3.06 "	1.40 "	1.20 "	5.30 "
" 8 feet	3.00 "	1.73 "	1.20 "	6.41 "
" 39 feet	2.13 "	1.64 "	1.86 "	6.50 "
" 4 feet	2.18 "	2.68 "	1.84 "	6.65 "
" 34 feet	4.05 "	3.45 "	2.09 "	9.59 "
" 40 feet	4.51 "	2.13 "	3.44 "	10.08 "

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.

The highest temperatures of the air were at Helston, 65°0; Blackheath and Gloucester, both 61°7; Weybridge, 61°0; Ventnor, 60°9.

The lowest temperatures of the air were at Carlisle, 11°8; Allenheads, 13°0; Stonyhurst, 13°9; and at Silloth, 17°2.

The greatest daily ranges of the temperatures of the air were at East Tilbury, 15°5; Salisbury, 15°4; Gloucester, 14°5; Chiswick, 14°2.

The least daily ranges of the temperatures of the air were at Bradford, 8°4; Guernsey, 8°5; and at Liverpool, 8°8.

The greatest numbers of rainy days were at Truro, 76; Milltown, 74; and at Guernsey and Plymouth, both 73.

The least numbers of rainy days were at Cardington, 49; Chiswick and Leeds, both 52; and at Gloucester, 54.

The heaviest falls of rain were at Allenheads, 18.75 inches; Stonyhurst, 15.83 inches; and at Cockermouth, 14.86 inches.

The least falls of rain were at Cambridge, 6.23 inches; North Shields, 6.36 inches; and at Cardington, 6.52 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.		Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Read- ings of the Thermometer.	Mean of all Lowest Read- ings of the Thermometer.	Mean Range of Temper- ature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Max- imum in Rays of Sun.	Mean Reading of Min- imum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.

QUARTERLY RETURN
OF
MARRIAGES, BIRTHS, AND DEATHS
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF
ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 114.] **Marriages**—*January, February, March, 1877.* [Price 9d.
 Births and Deaths—*April, May, June, 1877.*

*General Register Office, Somerset House,
1st August 1877.*

In the UNITED KINGDOM the *births* of 293,855 children, and the *deaths* of 176,585 persons of both sexes, were registered in the three months ending 30th June 1877. The recorded natural increase of population was thus 117,270.

The registered number of persons married in the quarter ending 31st March 1877 was 109,422.

The resident population of the United Kingdom in the middle of 1877 is estimated at 33,444,419; that of England and Wales at 24,547,309, of Scotland at 3,560,715, and of Ireland at 5,336,395. The birth-rate in the United Kingdom in the second quarter of 1877 was 35·2 per 1000, and the death-rate 21·2. The marriage-rate in the first quarter of 1877 was 13·3 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2188 Registrars in all the districts of England and Wales during the quarter ending 30th June 1877; and the MARRIAGES in 13,768 churches or chapels, in 7858 registered places of worship unconnected with the Established Church, and in 632 Superintendent Registrars' Offices, in the three months ending 31st March 1877.

The returns of births and of deaths for the quarter that ended on June 30th are not unfavourable. The births and the deaths were slightly above the average. The mild winter had seen many lives survive that colder weather would have cut off; and the spring that was not genial in April and May saw some of the survivors die. Small-pox, which had been chiefly fatal in London and Lancashire, began to decline; so did scarlet fever. Enteric fever grew less fatal. Whooping-cough, measles, and affections of the respiratory organs were the prevailing types of malady; but no great zymotic wave set in. The marriages, generally low in the three months that ended on March 31st, were much below the average; they have not been so low since the winter of 1871. The fall is due to the depression of trade, especially in the coal and iron districts. Emigration fell off. Wheat rose to a high price; so did potatoes. Coal was not so dear as it had been in previous years. Fewer than usual were relieved out of the poor rates.

Marriages.

During the first three months of this year 79,510 persons were married in England and Wales, showing a decline of 4004 from the number in the corresponding quarter of 1876. The marriage-rate, which in the March quarters of 1875 and 1876 had been equal to 14·4 and 13·8 per 1000, further declined to 13·1 in the first three months of this year, and was 0·7 below the average rate in the corresponding period of the ten preceding years. The annual marriage-rate in the winter quarter of the 38 years 1838-75 averaged 13·8 per 1000, and ranged from 12·4 in 1838 to 15·6 in 1853. From 1870 to 1873 the marriage-rate in England and Wales showed a steady increase, whereas since 1873 the rate has continuously declined.

The marriage-rate in the first three months of this year was equal to 16·4 in the North-western Division (consisting of Lancashire and Cheshire), and to 15·1 in the Metropolitan and Yorkshire Divisions; in the extra-metropolitan portion of Middlesex and in Herefordshire the rate was so low as 7·4 and 7·8, and it was but 8·4 below the average in Essex and Cambridgeshire. The present decline in the marriage-rate is much more marked among the population of the Northern and Midland counties engaged in mining and in hardware manufacture, than among the rural populations or the population of Yorkshire and Lancashire so largely engaged in textile fabric manufacture.

Births.

In the second or Spring quarter of this year, ending 30th June last, 223,200 births were registered, equal to an annual rate of 36·5 per 1000, showing a decline of 0·9 from the rate which prevailed in the corresponding quarter of 1876, but exceeding by 0·3 the average rate in the second quarters of the ten years 1867-76. The mean annual birth-rate in the second quarters of the 38 years 1838-75 was equal to 35·2 per 1000, or 1·3 lower than the rate in the corresponding period of this year, now under notice. The sex proportion of the children whose births were registered in the quarter was 103·3 boys to 100 girls; the average proportion of boys to 100 girls born during 1876 was 103·9, which was somewhat below the average proportion during the 38 years 1838 to 1875.

The annual birth-rate in the three months ending June last ranged from 26·6 and 28·0 in Dorsetshire and the extra-metropolitan part of Surrey, to 43·6 and 45·7 in Staffordshire and Durham. In the mainly agricultural counties of the South-western Division the birth-rate did not exceed 29·7 per 1000, whereas in the four Northern counties, in which the population is principally engaged in mining, the rate averaged 42·8. The birth-rate last quarter, which showed a general decline from that which prevailed in the corresponding period of 1876, had increased in Warwickshire and in North Wales.

In twenty of the largest English towns the birth-rate averaged 37·1 per 1000 and exceeded the rate in England and Wales by 0·6. The rate did not exceed 28·0 and 31·3 in Brighton and Plymouth, whereas it ranged upwards to 47·2 and 48·0 in Oldham and Salford. The population of Salford is probably under-estimated, but the local authorities have not yet supplied the Registrar General with the necessary facts to supply the basis for a more reliable estimate. In fifty other large town districts the birth-rate averaged 38·1 per 1000, exceeding by one per cent. the average rate in the twenty largest towns; the lowest rates in these fifty towns were 23·4 and 25·8 in Cheltenham and Bath, whereas the rates in the other towns ranged upwards to 49·1 and 52·4 in St. Helens and Barrow-in-Furness.

The birth-rate in a population is mainly dependent upon the proportion of married women at the child-bearing ages. The proportion of married women at these ages in Bath and Cheltenham is but 9·7 and 9·4 per cent. of the total population, whereas in the whole of England and Wales it averages 11·5 per cent. Hence the birth-rate per 1000 of the population at all ages during 1876 was 26·6 and 23·1 in Bath and Cheltenham, while in England and Wales it averaged 36·5. Calculated upon the number of married women aged between 15 and 45 the birth-rate was 275·4 per 1000 in Bath, 246·3 in Cheltenham, and 319·7 in England and Wales; these rates show far less difference than those calculated upon the population at all ages, and the difference would probably be further narrowed

if the birth-rates were calculated upon the proportions of the population living at the ages 20 to 35, which are the principal child-bearing ages.

Movement of the Population.

The *natural* increase to the population of England and Wales during the quarter ending June last, by excess of births over deaths registered, was 91,931, against 83,940 and 99,654 in the corresponding periods of 1875 and 1876. The *actual* increase to the population during the quarter is also dependent upon the balance between immigration and emigration; this, however, is unknown, as no complete record of immigration exists. Board of Trade returns show that only 35,681 emigrants embarked during the three months ending June, from the various ports of the United Kingdom at which emigration officers are stationed, against numbers declining steadily from 137,611 to 45,143 in the corresponding periods of the four preceding years. The number of emigrants in the quarter was considerably lower than that recorded in the June quarter of any year since 1847, the first year for which similar returns are available. Excluding foreigners, and distributing proportionally 377 whose nationality was undistinguished, the emigrants of British origin during the quarter were 26,544, including 16,040 English, 2586 Scotch, and 7918 Irish. The proportions of emigrants, to a million of the population, were 653 from England, 726 from Scotland, and 1484 from Ireland. Compared with the average proportions of emigrants during the second quarters of the seven years 1870-6, emigration during the quarter just ended showed a decline of 57 per cent. in England, 68 per cent. in Scotland, and 75 per cent. in Ireland. Of the 26,544 British emigrants during last quarter, 60 per cent. left for the United States, 23 per cent. for the Australian Colonies, 11 per cent. to British North America, and 6 per cent. for all other places. These proportions differed but slightly from those which prevailed in the corresponding quarter of 1876.

Prices, Pauperism, and Meteorology.

The average price of wheat during the three months ending June last was 61s. 5d., showing a further increase of 10s. 1d. upon the average prices that prevailed in the five preceding quarters, and exceeding the average price in any quarter since the first of 1874, when it was 62s. 2d. The recent marked increase in the price of wheat was coincident with the outbreak of the Russo-Turkish war. The mean wholesale prices of beef and of mutton averaged 6½d. and 7d. per lb.; the price of beef showed a slight increase upon that which prevailed in the two preceding quarters, whereas that of mutton showed a further decline, and was lower than in any quarter since the first of 1875, when the mean price did not exceed 6½d. The average price per ton of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 18s. 1d. per ton, a lower price than has prevailed in any quarter since the summer of 1871. The average price of Consols was 94½l., against 95½l. in the preceding three months. The minimum annual rate of discount charged by the Bank of England, which had remained at 2l. per cent. from 19th April 1876, was raised to 3l. per cent. on 3rd May, which price was maintained until the end of the quarter.

The average number of paupers relieved on the last day of each week in the quarter was 667,806, of whom 143,744 received in-door, and 524,062 out-door relief. The number of in-door paupers showed a further increase of 9387 upon those returned in the corresponding quarters of 1875 and 1876. Compared with the numbers in the June quarter of 1876, the number of in-door paupers in the second quarter of this year showed an increase of 7·0 per cent., whereas the number of out-door paupers showed a decrease of 2·1 per cent.; the total number of paupers had declined 0·3 per cent. During last quarter 21·5 per cent. of the total paupers, excluding vagrants and lunatic paupers in asylums, were in receipt of in-door relief; in the corresponding period of 1867 the proportion of in-door to total paupers was but 14·7 per cent., since which it has steadily increased. In 1870 the average number of paupers receiving in-door and out-door relief was equal to 43·1 per 1000 of the estimated population; whereas during the quarter ending June last the proportion of the population in receipt of relief had declined to 27·2 per 1000.

The remarks upon the meteorology of the quarter at the Royal Greenwich Observatory and at other stations of observation, with accompanying tables, furnished by Mr. James Glaisher, F.R.S., will be found on pages 65-72. The most noticeable features of the weather in the quarter were the low temperature during the greater part of April and May, and the severe night frosts early in May; while the temperature of June was considerably above the average. The readings of the barometer ruled low during April and May, while they showed an excess in June. The mean temperature of the quarter at the Royal Greenwich Observatory was 51° and was $0^{\circ}\cdot4$ below the average for the corresponding period in 106 years. In April the mean temperature was $45^{\circ}\cdot4$ and $0^{\circ}\cdot7$ below the average; in May it was $48^{\circ}\cdot9$, and the deficiency $3^{\circ}\cdot6$. In June, however, the mean was $61^{\circ}\cdot3$, and showed an excess of $3^{\circ}\cdot1$. May was but slightly colder than that of 1876, while the mean temperature in June exceeded that of June 1876 by $2^{\circ}\cdot8$, and was higher than the mean temperature of any June since 1868, when it was $62^{\circ}\cdot0$. The mean temperature of the quarter at 46 stations of observation ranged from $46^{\circ}\cdot0$ near Halifax to $54^{\circ}\cdot0$ in Barnstaple.

The measured rain-fall of the quarter at the Greenwich Observatory was $5\cdot3$ inches, and was half an inch below the average amount in the corresponding period of 62 years. The rain-fall of the first six months was $13\cdot6$ inches, and exceeded the average amount by $2\cdot8$ inches, owing to a marked excess in January and April. In April $3\cdot2$ inches were measured, showing an excess of $1\cdot5$ inch; in May and June the amounts measured were $1\cdot4$ and $0\cdot7$ inches, and the deficiencies $0\cdot7$ and $1\cdot3$ inches, respectively. Rain was measured at Greenwich on 37 of 91 days of the quarter; on 20 days of April, 10 of May, and 7 of June. During the 62 years 1815-76 there were only seven instances of so small a rain-fall in June as that recorded this year; the smallest amount during those years was $0\cdot3$ of an inch in June 1849. At the various stations of observation the number of days on which rain was measured during the quarter ranged from 32 at Cambridge and at Norwich, to 54 at Bywell. The smallest measured rain-fall of the quarter at these stations was $3\cdot96$ inches at Cambridge, and the largest amount was $10\cdot74$ inches at Truro.

State of the Public Health ; Deaths.

During the three months ending 30th June last 131,289 deaths were registered, equal to an annual rate of $21\cdot5$ per 1000 of the estimated population in the middle of the year. This rate was $0\cdot4$ above the average rate in the corresponding period of the ten years 1867-76. The average death-rate in the second quarters of 38 years 1838-75 was $22\cdot0$ per 1000; the lowest rates in those 38 spring quarters were $20\cdot2$ and $20\cdot4$ in 1868 and 1873, and the highest $25\cdot1$ and $24\cdot2$ in 1847 and 1866. The excess of the death-rate last quarter was probably in great measure due to the unseasonably low temperature which prevailed during the greater part of April and throughout May. The excess of the death-rate in April and May was only partially counterbalanced by the low death-rate during June. The returns for London show that during the three months ending June the registered deaths exceeded the corrected average number in the corresponding period of the preceding years by 869, of which 766, or 88 per cent., were due to diseases of the respiratory organs. It is evident, therefore, that to the cold spring, following an unusually mild winter, was due the excessive death-rate last quarter caused by a large number of deaths referred to bronchitis and pneumonia.

The 131,289 deaths included 68,899 of males, and 62,390 of females; the death-rate of males was equal to $23\cdot1$, and of females to $19\cdot9$, per 1000 living of each sex. In equal numbers living the deaths were as 116 of males to each 100 of females, corresponding with the proportion which prevailed in the second quarter of the year. The relative mortality among males and females in different parts of England differs in a remarkable manner. In Lancashire the death-rate of males to that of females was as 121 to 100, and in the West Riding of Yorkshire as 125 to 100; in Westmorland, however, the death-rate of males to that of females was as 86 to 100.

In the eleven Registration Divisions the annual death-rate among persons of both sexes ranged from $17\cdot0$ and $18\cdot1$ in the South-eastern and South-midland

24·7 and 25·1 in the Welsh and North-western. In the extra-metropolitan portion of Surrey and in Westmorland the death-rate was but 15·7 and 16·3 per 1000, whereas it was equal to 25·9 in Lancashire, and 27·9 in Monmouthshire. In equal numbers living, the deaths in Monmouthshire last quarter were as 178 to each 100 dying in the extra-metropolitan portion of Surrey. It may be noted that the highest county death-rates in the first quarter of the year also occurred in Monmouthshire and Lancashire.

In the principal urban populations of England and Wales the death-rate in the quarter was equal to 22·7 per 1000, whereas in the remaining or rural population it did not exceed 19·7; each of these rates slightly exceeded the average for the corresponding period of the last ten years, but the excess upon the average was somewhat larger in the rural than in the urban population. The improving sanitary condition of our larger towns is lessening the wide difference between urban and rural death-rates in England and Wales, but in equal numbers living the deaths among the urban last quarter were as 115 to 100 in the rural districts; in the corresponding quarter of the ten preceding years the average proportion of the death-rates in town and country was as 116 to 100.

In twenty of the largest English towns, including London, having an estimated population of about seven millions of persons, the death-rate averaged 23·4 per 1000, and exceeded the general urban rate by 0·7. The rates in the twenty towns ranged from 16·7 and 18·2 in Portsmouth and Brighton, to 31·7 and 33·5 in Salford and Oldham. These two last-mentioned towns also show the highest death-rates from the principal zymotic diseases, and in Oldham the rate of mortality among both infants and elderly persons was exceptionally high. In Salford no less than 21 per cent. of the deaths were due to the seven zymotic diseases, whereas the average proportion of zymotic deaths in the twenty towns did not exceed 13·7 per cent. In fifty other English and Welsh town districts, with a population little short of three million persons, the death-rate averaged 22·4 per 1000, and was one per 1000 below the rate in the twenty larger towns. The lowest rates in these fifty town districts were 15·7 in Dover, 15·7 in Yarmouth, 16·7 in Chatham, and 16·8 both in Devonport and South Shields; the highest rates were 29·1 in Wigan, 31·6 in Exeter, 32·3 in Ashton-under-Lyne, and 32·8 in Newport (Monmouth). In the remaining English urban population, consisting of about four and a half millions of persons, living principally in small towns, the average death-rate in the quarter was 21·8 per 1000, and was 1·3 below the rate in the seventy larger towns.

The 131,289 deaths at all ages included 29,541 of infants under one year of age, equal to 132 per 1000 births registered; this rate of infant mortality corresponded with the average proportion in the second or spring quarters of the seven preceding years 1870-6, in which the extreme proportions were 139 in 1875, and 127 in 1876. In the eleven Registration Divisions the rate of infant mortality, measured in this manner, ranged from 108 and 109 in the principally agricultural population of the South-midland and South-western, to 143 in Monmouthshire and Wales, and 147 in the North-western counties of Lancaster and Chester. In the twenty large English towns the proportion of infant mortality averaged 145 per 1000, and ranged from 109 and 114 in Plymouth and Portsmouth, to 170 and 194 in Oldham and Liverpool. The rate of infant mortality in Lancashire continues to show the excess which has been so frequently pointed out in these returns; in the whole county the proportion of deaths under the age of one to births averaged 152 per 1000, corresponding with the proportion which prevailed in the first quarter of the year. In Liverpool and in Oldham the rate of infant mortality exceeded the rates in any others of the twenty towns, but the excess in many of the smaller Lancashire towns was fully as great or greater; for instance, in Preston, Blackburn, Rochdale, and Ashton-under-Lyne, having an aggregate population of 283,879 persons, the deaths under one year of age averaged 191 per 1000 of the births registered, the proportion in Blackburn being so high as 214 per 1000. This excessive rate of infant mortality is not the only sign of the unsatisfactory sanitary condition of Blackburn. In Monmouthshire the rate of infant mortality was equal to 174 per 1000, owing to an exceptionally fatal epidemic of measles, which raised the rate of infant mortality in Newport to 221 per 1000 births registered.

The annual rate of mortality during the quarter among children and adults aged between one and 60 years was equal to 12·4 per 1000 living at these ages, and was

almost identical with the average rate in the June quarters of the seven preceding years; the rates at these ages in these seven spring quarters ranged from 13·1 in 1871, to 11·6 in 1873. In the twenty large towns the annual death-rate between one and 60 years averaged 14·7 per 1000, and while it was but 9·3 and 10·6 in Portsmouth and Leicester, it ranged upwards to 21·4 and 22·3 in Oldham and Salford; these two boroughs also showed the highest death-rates at this group of ages during the first quarter of the year.

Among persons aged upwards of 60 years the annual rate of mortality in England and Wales averaged 74·0 per 1000 living, and exceeded by 5·1 per 1000 the average rate among persons at these ages in the seven preceding corresponding quarters. The lowest spring death-rate among elderly people was 65·7 in 1874, and the highest rate 74·2 in 1875. In the twenty towns the death-rate in the quarter among persons at these ages averaged 79·2 per 1000; the lowest rates were 58·5 and 71·5 in Brighton and Leicester, and the highest 98·7 in Manchester and 111·1 in Oldham. The past spring appears to have been especially favourable to the health of elderly persons in Brighton, the death-rate among persons aged upwards of 60 years having there been not only very considerably lower than in any other of the twenty largest towns, but also lower than the rate which prevailed there at these ages in the spring quarter of 1876.

ZYMOTIC DISEASES.—The 131,289 deaths from all causes in England and Wales during last quarter included 3107 which were referred to whooping-cough, 2764 to scarlet fever, 2730 to measles, 2191 to various forms of fever, 1966 to diarrhoea, 1416 to small-pox, and 547 to diphtheria; in all, 14,721 deaths resulted from these seven principal zymotic diseases, equal to an annual rate of 2·4 per 1000. This zymotic rate was 0·5 below the average rate from the same diseases during the seven preceding corresponding quarters, and was lower than the rate in any one of those seven spring quarters, except that of 1873, when it was but 2·1. The death-rate from these diseases in the mainly agricultural counties of the South-eastern and South-midland Divisions did not exceed 1·4 per 1000, whereas it was equal to 3·3 in London, 3·4 in the North-western counties of Lancaster and Chester, and 3·4 in Monmouthshire and Wales. In the counties of Buckingham and Hereford the annual zymotic death-rate last quarter but slightly exceeded one per 1000, whereas it was equal to 3·5 in Lancashire, and was no less than 7·2 in Monmouthshire, mainly owing to the epidemic fatality of measles. In the twenty towns the rate from these diseases averaged 3·2 per 1000, and whereas it did not exceed 1·2 and 1·4 in Nottingham and Brighton, it ranged upwards, in the other towns, to 4·2 and 6·6 in Oldham and Salford. In fifty other large town districts the zymotic rate averaged 2·9 per 1000, and was slightly below that which prevailed in the larger towns. The lowest zymotic rates in the 50 towns were 0·6 in Yarmouth, 0·7 in Coventry, and 0·9 in Lincoln; the highest were 5·6 in Wigan, 5·7 in Cardiff, 6·4 in Barrow-in-Furness, 8·9 in Exeter, and 12·8 in Newport (Monmouth). Scarlet fever caused the high zymotic death-rates in Wigan and Exeter, measles in Cardiff and Newport (Monmouth); and in Barrow-in-Furness both measles and scarlet fever were fatally prevalent.

Whooping-cough was the most fatal zymotic disease in England and Wales during the three months ending June last, and caused 3107 deaths, equal to an annual rate of 0·51 per 1000; in the seven preceding corresponding quarters the rate from this disease averaged 0·50 per 1000, and ranged from 0·38 in 1874 to 0·61 in 1875. Whooping-cough is almost invariably more fatal in the first than in the second quarter of the year; the reverse has, however, been the case this year, as the deaths referred to this disease in the quarter ending June exceeded those of the preceding three months by 574. This unusual result was probably owing to the low temperature and cold winds of April and May. Whooping-cough was fatally prevalent during last quarter in Liverpool, Manchester and Salford, Bristol, Oldham, and Sheffield; also in Cambridge, Ipswich, West Bromwich, Bolton, Ystradefodwg, Mold, and Festiniog.

The 2764 deaths from *scarlet fever* showed a decline of 854 from those returned during the preceding three months, and were considerably fewer than in any quarter since the third of 1873. The annual death-rate from this disease was equal to 0·

per 1000; in the seven preceding June quarters it averaged 0·65 per 1000, and ranged from 1·07 in the second quarter of 1870 to 0·36 in the corresponding period of 1873. Compared with the numbers in the first quarter of the year, the fatal cases of scarlet fever showed the largest proportional decline in the South-eastern, West-midland, and Northern registration divisions. The death-rate from scarlet fever was but 0·17 in the counties of the Eastern Division, whereas it was equal to 1·62 in Monmouthshire, 1·41 in Wiltshire, and 1·29 in Cornwall. Among the twenty largest towns the rate of mortality from scarlet fever averaged 0·38 per 1000, which was below the average rate in the whole of England and Wales; the disease showed, however, excessive fatality in Wolverhampton and Sunderland. Among the fifty other large town districts scarlet fever was fatally prevalent in Reading, Shrewsbury, Stoke-upon-Trent, Dudley, and Wigan, and an exceptionally fatal epidemic prevailed in Exeter, where the disease caused 62 deaths, equal to an annual rate of 7·1 per 1000. Many other localities suffered from severe outbreaks of scarlet fever, among which the following may be mentioned:—Northfleet, Trowbridge, Bovey Tracey, Cullompton, St. Austell, Watchet, Gloucester, Willenhall, Nantwich, Hindley, Lydney, Tredegar, Pembroke and its neighbourhood, and Conway. The fatality of scarlet fever in the parish of Lydney, where the establishment of iron and tin-plate works has led to a rapid increase of population in recent years, is especially noteworthy; the 23 recorded deaths from scarlet fever were equal to an annual rate of 25 per 1000 persons estimated to be living. The parish of Lydney is under the sanitary control of the Chepstow rural sanitary authority, which forms part of the Gloucestershire Combined District.

The 2730 deaths from *measles* were equal to an annual rate of 0·45 per 1000, which slightly exceeded the average rate from this disease in the seven preceding corresponding quarters; in the June quarter of 1875 the death-rate from measles was so low as 0·24, while in the same period of 1874 it had been 0·63. Fatal outbreaks of measles occurred in the following localities:—Kettering, Ipswich, Bath, Worcester, Birmingham, Salford, Lytham, Dalton, Barrow-in-Furness, Bootle, Blaenavon, Tredegar, Newport (Monmouth), Cardiff, Pontypridd, and Swansea.

The returns for the second quarter of this year show the continuance of the recent marked decline in the rate of mortality from *fever*, including typhus, enteric or typhoid, and simple or undistinguished forms of fever. During the three months ending June last, 2191 deaths were referred to fever, equal to an annual rate of 0·36 per 1000, which was 0·14 (or 28 per cent.) below the average rate from fever in the corresponding quarters of the seven years 1870–6. In the second or spring quarters of the eight years 1870–7, the death-rate from fever steadily declined from 0·63 to 0·36. The fever rate in the principally agricultural population of the Eastern Division did not exceed 0·22 per 1000, whereas it ranged upwards to 0·54 and 0·56 in Lancashire and Durham, where the population is mainly engaged in manufacturing and mining operations. In the twenty largest towns the fever rate last quarter averaged 0·37 per 1000, and but slightly exceeded the general rate in England and Wales. The fever rate among the three millions and a half of persons living in London did not exceed 0·29 per 1000, while it was but 0·11 and 0·13 in Bradford and Nottingham; the fever rate in Bristol was, however, equal to 1·15 per 1000. In the fifty other large town districts the death-rate from fever averaged 0·42 per 1000, and was equal to 0·91 in Exeter, 0·93 in Bury, 1·00 in Shrewsbury, and 1·06 in Rochdale. The deaths referred to fever showed an excessive rate in Newton-in-Makerfield, Stayley, Dewsbury, Rotherham, Stockton, and Ystradfydwg.

The fatal cases of *small-pox* registered during the quarter were 1416, and showed a decline of 527 from the number in the first three months of this year. The deaths from small-pox in England and Wales steadily increased from 149 in the last quarter of 1875 to 1943 in the first quarter of this year. The 1416 in the three months ending June last included 904 in London and its suburban districts, 315 in Lancashire, and 86 in Cheshire; while but 111 fatal cases were recorded in the rest of England and Wales. The annual death-rate from small-pox during the quarter, to a thousand living, was equal to 0·83 in Greater London, 0·41 in Lancashire, and 0·59 in Cheshire, whereas it did not average more than 0·03 per 1000 in all other parts of England and Wales; each of those rates, except that in Cheshire, showed a decline from those which prevailed in the first quarter

of the year. No fatal case of small-pox was registered in thirteen English counties or in ten of the twenty largest towns, among which the fatal prevalence of the disease was confined to London, Liverpool, Manchester and Salford, and Oldham. The disease caused 47 deaths in Birkenhead, 10 in Preston, and 6 in Ashton-under-Lyne; it was also locally fatal in Dartford, Orsett, South Benfleet, Glossop, Altrincham, Barton-upon-Irwell, and Lancaster.

The 547 deaths referred to *diphtheria* showed a marked decline from the numbers in recent quarters. The fatal cases of this disease were proportionally excessive in Rolvenden, Padstow, Church Stretton, Ellesmere, Rosliston (near Burton-upon-Trent), Shepley, and Tredegar. Diphtheria has one character common with scarlet fever; it is sometimes fatal to more than one child in a family. Thus of five deaths from diphtheria in Church Stretton, three occurred in one house; the four deaths at Padstow occurred in one family; and the disease was fatal to a family of six children in Ellesmere.

The death-rate from *diarrhœa* differed but slightly from the average rate in the corresponding period of the last seven years.

DEATHS IN PUBLIC INSTITUTIONS.—In workhouse establishments, hospitals, and public lunatic asylums, 13,379, or 10·2 per cent. of the deaths, were registered during last quarter; this proportion exceeds that which prevailed in any quarter since the end of 1869, and was 1·0 above the average per-centage in the corresponding quarter of the seven years 1870-76. In the twenty large English towns 6684, or 16·2 per cent. of the deaths were recorded in public institutions; the percentage ranged from 7·4 and 7·7 in Bradford and Oldham, to 18·7 in Brighton and Wolverhampton, and 20·2 in London. Excluding the twenty large towns, the average proportion of institution deaths in England and Wales last quarter averaged 7·4 per cent.

VIOLENT DEATHS.—The 4257 deaths referred to different forms of violence differed but slightly from the numbers in the two preceding quarters, and were equal to an annual rate of 0·70 per 1000 persons living, and to 3·2 per cent. of the deaths from all causes. In the agricultural counties of the Eastern Division the death-rate from violence did not exceed 0·48 per 1000, whereas it was equal to 0·81 in the Northern counties where so large a proportion of the population engaged in mining. In the twenty large towns the death-rate from violence averaged 0·82 per 1000, and while it was but 0·35 and 0·38 in Brighton and Portsmouth, it was equal to 1·15 in Liverpool, and 1·27 in Birmingham.

INQUESTS.—During the three months ending June last, 6456 deaths were registered from the certificates of coroners, equal to 4·9 per cent. of the total deaths, showing a slight decline from the average proportion in recent quarters. In the twenty large towns the per-centage averaged 6·0; in Sheffield and Oldham the proportion of inquest cases was so low as 2·4 and 2·8, while it was equal to 8·1 in Manchester and 8·3 in Birmingham. The Medical Officer of Health of Sheffield has recently called attention to the large proportion of uncertified causes of death in that borough, with especial reference to the small number of inquests held. During the quarter now under notice no less than 112, or 6·6 per cent. of the deaths were registered in Sheffield without any certificates of their causes. Registrars are instructed to refer all cases of deaths from violence, as well as all cases attended by any apparently suspicious circumstances, to the coroner previously to registration; if, however, the coroner decide not to hold an inquest, the registrar is bound to register the death on the best information as to its cause that he can obtain from the ordinary informant. The local registrars report that in Sheffield, in many cases of death from violence and other causes referred to the coroner, he pronounced inquests to be unnecessary. If more than 8 per cent. of inquests are necessary in Manchester and Birmingham, it would be difficult to prove that only 2·4 per cent. are necessary in Sheffield. The proportion of uncertified deaths is dependent in great measure upon that of inquest cases, and it may be stated that in London where the proportion of inquests last quarter was equal to 6·6 per cent., the proportion of uncertified causes of death but slightly exceeded one per cent.

WATERING PLACES AND SUMMER RESORTS.

Migration is an instinct in birds and some other animals. They seek warmer or colder climates in winter or summer. And these passages attended with effort, fatigue, and danger, no doubt on the whole conduce to their well-being. Englishmen have also their instincts; they move about partly for the sake of change, partly for sport, and partly for the exhilarating scenery and air of the sea, moors, and mountains.

Many go abroad and visit cities or places, some of which, in their present condition, are insalubrious, or of very doubtful salubrity. Of the condition of few have we any positive information. In England people can learn accurately whether the mortality of a place is below or above the average. If zymotic disease is in activity it is known. This is upon the whole advantageous. It has a salutary effect on the health resorts themselves, by the seaside or inland; and it is a warning or an invitation to visitors.

Forty-six of our English watering-places are, in the aggregate, comparatively healthy. A few are large towns, but the majority of them are places of moderate extent and population. Being unable to give the mortality within the exact limits, it has been thought useful at the present time in continuation of previous returns to collect in a table the districts and sub-districts which approximate as closely as possible to the towns and watering-places on the seaside or inland to which families frequently resort in summer.

The inland places are on the whole the densest, so the mortality is slightly higher than in the places on the seaside; but the difference is not great. In the three months of April, May, and June the mortality was at the rate of 17·8 in the seaside districts, and 18·6 in the inland districts, or 18·0 in both classes combined. This was 3·5 below the death-rate (21·5 per 1000) of the kingdom, and 4·7 below the death-rate of the town districts. Upon the whole the selection of summer resorts is judicious.

The mortality was much below the average in Margate (13), Ramsgate and Broadstairs (16), Eastbourne and Seaford (13), Worthing (16), Littlehampton (15), Lyme Regis (11), Dawlish and Teignmouth (15), Torquay (15), Weston-super-Mare (16), and Clifton (14). In Lowestoft 14 children died of measles, yet, including these deaths, the rate of mortality was low (14). So in Dover there were deaths from whooping-cough and scarlet fever, yet the mortality (16) was below the average.

The mortality was above the average in some districts. Thus it was 24 in Whitby, where there were deaths from diarrhoea and scarlet fever. Whitby contrasts with Scarborough, where the mortality was 18. Are the drainage and water supply as good in Whitby as they are now in Scarborough? In the Welsh sub-districts the mortality was at rates above 20, except in Aberystwith, where it was 19; it was 22 in Bangor, 27 in Creuddyn (of which Llandudno is a part), 25 in St. Asaph (of which Rhyl is a part). In Wallasey, where New Brighton is on the south side of the Mersey, the mortality was 19, and there were deaths from small-pox. In North Meols, of which Southport-on-the-Sea is a part, the mortality was 25, and there were a few deaths from various zymotic diseases. In Poulton-le-Fylde, including Blackpool-on-the-Sea and Fleetwood at the mouth of the Wyre, the mortality was 21, and several zymotic diseases were rife. Harrogate, where the authorities appear to have quarrelled with their Medical Health Officer for discussing the state of their district, the mortality was 23, and higher than in any other inland health resort. There were 4 deaths from scarlet fever, 2 from diphtheria, 1 from whooping-cough, 3 from diarrhoea. The annual mortality of Harrogate was 18 in the ten years 1861-70. Clifton was the healthiest of the inland districts (14). The mortality of Bath was raised by measles.

One thing to bear in mind in consulting these returns is, that every part of a wide district may differ in salubrity, and that while some of its houses are suffering, others are quite free. The returns show the general character of a district, and will be of use to the public and to medical men in advising their patients.

Families with young children will do well to take the returns into account, and to get local information which can generally be obtained with a little trouble, as the deaths in every house are registered.

The Table 12 of Foreign cities should be consulted by tourists who are travelling on the continent, where children are sometimes exposed to infection from prevalent diseases in hotels without pure water, and with imperfect sanitary arrangements. Some deplorable deaths at ages particularly susceptible of typhoid fever, suggest caution to young people on wedding and other tours. England, Ireland, and Scotland are safer in their picturesque regions.

Among the 2188 sub-districts of England, the skilful will find places as healthy and even healthier, than those that are now places of summer resort. They can be found out by inquiry into the hygienic conditions of the water, soil, and houses, and into the facts displayed in the elaborate Tables pp. 14-64, showing the population, births, deaths, and prevalent diseases during last quarter.

HEALTH OF FOREIGN CITIES.

A summary of the weekly returns with which the Registrar General is favoured by various local authorities abroad shows that the average annual death-rate during the second quarter of 1877, in twenty-nine Indian and Foreign cities, was 31· per 1000; or, excluding Madras, where the rate was so exceptionally high, the average rate was 28·9, against 23·4 in twenty of the largest English towns. The population of these twenty-nine Foreign cities is estimated at rather more than 11,000,000 of persons. The lowest death-rates in these cities were 17·8 and 19· in Boston and Philadelphia; whereas the rate was equal to 41·3 in Buda-Pesth, 44·5 in Alexandria, 65·0 in Bombay, and 121·6 in Madras. Cannot more be done for Madras? Its hygienic condition has been for some months deplorable. In the thirteen weeks taken to represent the quarter, cholera caused 1765, and small-pox 3186 of the 12,044 deaths registered in Madras. In Calcutta and Bombay 328 and 1241 deaths were respectively referred to cholera. In Paris 212 deaths resulted from typhoid fever, against 386 in the preceding quarter; the annual death-rate from this disease in Paris was equal to ·43 per 1000, while in London it did not exceed ·18 per 1000. Small-pox was prevalent in Bombay, Madras, Brussels, and Vienna, though in the Indian cities the mortality from this disease considerably declined towards the end of the quarter. Scarlet-fever and diphtheria were fatally prevalent in Berlin, New York, and Brooklyn; and whooping-cough caused 130 deaths in Alexandria.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1867-77**, and in each Quarter of those Years.

YEARS -	1867	1868	1869	1870	1871	1872	1873	1874	1875	1876	1877

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

Note.—The three months January, February, March, contain 90, and in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction is made in calculating the rate of mortality in the different quarters of the year. The annual rate is the mean of the four quarterly rates.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the first column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District.

* For method of framing these estimates see note * to Table VI. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesborough have been based upon local information as to the increase of the inhabited houses in these boroughs.

† The rates of mortality* for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Asylums and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situate outside that area.

TABLE X.—**Mortality in Districts or Sub-districts containing the principal English Watering Places during the Second or Spring Quarter of 1877.**

District Number.	WATERING PLACES.	AREA in Acres.	Esti- mated POPU- LATION in the middle of 1877.	DEATHS registered in the Quarter ending 30th June 1877.	ANNUAL RATE of MORTALITY per 1000 living.			DISTRICTS and SUB- DISTRICTS taken as approximately rep- resenting the Watering Place.
					In 10 Years 1861-70.*	In Quarter ending 30th June 1877.

* The annual rate of mortality during the ten years 1861-70 has not been corrected for deaths in Institutions.

† The rates of mortality for these towns have been corrected by the exclusion of deaths occurring in County House Lunatic Asylums situate within the districts or sub-districts taken to represent the watering place, or by the exclusion of a portion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the district or where the Workhouse is situate outside that area.

‡ The area of that portion of the parish of Tunbridge which forms part of the town of Tunbridge Wells, and is situate within the sub-district of that name, has been estimated from the proportion of the population enumerated within and without the sub-district. The correct area of each portion of the parish is not known to the Registrar-General.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1861 and 1871; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. A proportion of the deaths recorded in the two Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring.

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ less from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page 14.

NOTE.—The Registrars alone must be considered responsible for the correctness of their returns, and for the opinions expressed in them respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND. of INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also INQUEST CASES and in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and of ENGLAND.

^a The Superintendent Registrars' Districts are collections of contiguous Parishes or Places, nearly always identical with the Poor Unions of the same names; they are 632 in number, and are here arranged topographically under the Registration Counties.

^b These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

^c See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS—continued.

Superintendent Registrars' Districts.		Area in Statute Acres.	Enumerated Population, 1871.	Mar- riages	Births	Deaths		The DEATHS in the Quarter are stated by the Registrars to include												
						Registered in Quarter ending 31 Mar. 1877.	Registered in Quarter ending 30 June 1877.	Average in Quarters ending 30 June in the 3 Years 1874-76.	Registered in Quarter ending 30 June 1877.	Deaths of	Deaths from									
								Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Insti- tutions.

^a The Sub-districts (2188 in number) are sub-divisions of Districts in which the Births and Deaths are registered by Registrars appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

^b For London the numbers of Births and Deaths, as well as the details given, "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from April to 30th June 1877. On the present occasion the London returns are for the same space of time—the three complete months of May, and June—as the returns from other parts of England and Wales.

I.—LONDON.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1871.	Births		Deaths		The DEATHS in the Quarter are stated by the Registrars to include ^a

NOTE.—The Registrars alone must be considered responsible for the correctness of their returns, and for the opinions expressed in the notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c., &c.

30 : 2.—There is no further case of small-pox.

31 : 4.—Small-pox was imported from London.

32 : 2.—The Registrar believes there is not a single case of small-pox existing.

36 : 1.—Of the 78 deaths in Public Institutions, 76 occurred in the Metropolitan District Asylum for imbeciles.

41 : 1.—Typhoid fever caused 4 deaths in Erith.

41 : 2.—Small-pox has now disappeared; there has been no fresh case since May.

42 : 1.—Of the 15 deaths from scarlet fever, 6 occurred in April, 3 in May, and 6 in June. The death from small-pox occurred on the 1st June.

43 : 1.—Of the 16 deaths from scarlet fever, 14 occurred in April, and 2 in June.

43 : 2.—Two of the deaths from small-pox occurred in June.

182 : 2.—There have been 2 cases of small-pox imported from London.

b 185 : 1.—Of the 14 deaths from small-pox, 5 were of persons who had been vaccinated, and 5 who had not.

c 189 : 2.—Of the 9 deaths from small-pox, 8 occurred in the Workhouse. The Rural Sanitary Authority have used the Infectious Wards of the Workhouse for the reception of small-pox patients, but in the early part of June small-pox broke out in the Workhouse itself and in the village of Orsett.

d 192 : 1.—The 5 deaths from small-pox occurred in the parish of South Benfleet. The Guardians have given instructions that no small-pox patients are to be admitted into the Workhouse.

a 250 : 2.—The above death from small-pox occurred in April; the energetic action of the Sanitary Authority successfully prevented the spread of the disease, which was brought from London by a servant who died.

b 241 : 1.—The 8 deaths from scarlet fever occurred at Gorse Hill; defective drainage is being remedied.

c 242 : 1.—The 4 deaths from scarlet fever were registered in June.

d 243 : 2.—Of the 45 deaths from scarlet fever, 11 were registered in April, 19 in May, and 15 in June.

e 250 : 1.—The 3 deaths from scarlet fever occurred in the parish of North Bradley.

f 252 : 1.—Only one of the deaths from scarlet fever was registered in June.

a 254 : 1.—The Registrar says that the exertions of the sanitary officer no doubt prevented the spread of small-pox.

b 255 : 1.—Small-pox was imported from London; there have been 2 other cases, but the precautionary measures of the sanitary officer checked the disease.

c 255 : 2.—The ages of the 12 persons aged 60 years and upwards, whose deaths were registered, averaged 75 years.

d 263 : 2.—There have been 2 cases of small-pox, but neither proved fatal.

e 263 : 3.—The death from small-pox occurred to a person visiting Wareham from London; every precaution has been taken to prevent the spread of the disease.

f 263 : 4.—The ages of the 7 persons aged 60 years and upwards, whose deaths were registered, averaged 76 years.

a 291 : 2.—Of the 5 deaths from scarlet fever, 3 were registered in April and 2 in June.

b 295 : 1.—The 4 deaths from diphtheria occurred in one family near the town of Padstow.

c 296 : 2.—During the first half of July 6 more deaths from scarlet fever were registered.

d 295 : 1.—The 3 deaths from scarlet fever, and the death from diphtheria, occurred in the immediate neighbourhood of Perran Wharf in the parish of Perranarworthal.

e 299 : 1.—The 4 deaths from scarlet fever occurred in the village of Porthleven, the last was registered on the 2nd May.

f 299 : 2.—The decrease in the number of births may be attributed to migration and emigration, owing to the discontinuance of mining operations. The 7 deaths from scarlet fever occurred in Helston, where there are still some cases remaining.

g 299 : 3.—The 2 deaths from scarlet fever occurred in one house in the parish of St. Anthony.

h 300 : 1.—The population is decreasing consequent on the decline of mining industry.

i 300 : 3.—The Registrar believes scarlet fever has now disappeared.

k 300 : 5.—Only one of the 10 deaths from scarlet fever was registered in June.

V.—SOUTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

a 301 : 1.—Of the 7 deaths from scarlet fever, 5 were registered in June.
b 302 : 1.—The average number of deaths is unduly raised by the drowning of 107 persons at the wreck of the Schiller in June excluding the 6 deaths the average number would be 8. Cerebro-spinal fever has been prevalent amongst young persons.
c 303 : 3.—The 9 deaths from scarlet fever occurred in Watchet; nothing appears to have been done by the Sanitary Authority.
d 310 : 1.—Sanitary measures have been taken to prevent the spread of scarlet fever.

V.—SOUTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1871.	Births Registered in the Quarter ending 30 June 1877.	Deaths Average in Quar- ters ending 30 June in the 3 Years 1874-76.	Deaths Registered in the Quarter ending 30 June 1877. a 351 : 8.—Of the 15 deaths from scarlet fever, 3 were registered in April, 6 in May, and 6 in June.
b 351 : 8, 9.—The sub-districts of St. Mary and St. Chad, which formed the district of Shrewsbury previously to 1st October 1877 on that date annexed, without change in their limits, to Atcham.
c 354 : 3.—Diphtheria was fatal to a family of 6 children in Ellesmere; the disease was brought from the village of Dudleston and had been epidemic. The action of the Sanitary Authority prevented the disease spreading in Ellesmere.
d 359 : 1.—Of the 5 deaths from fever, 4 were caused by typhoid.
e 361 : 1.—Of the 21 persons aged 60 years and upwards, whose deaths were registered, 11 exceeded 80 years.

^a 447 : 2.—The whole of the deaths from small-pox occurred within the township of Altrincham; 7 were of vaccinated, and 5 were unvaccinated persons.

^b 447 : 4.—There have been 12 cases of small-pox; the disease is supposed to have been imported from Altrincham.

^c 449 : 2.—Of the 2 deaths from small-pox, one occurred in the township of Witton, and one in the township of Anderton. The latter was imported from Liverpool.

^d 451 : 2.—Of the 19 deaths from scarlet fever, 5 were registered in April, 6 in May, and 8 in June.

^e 454 : 1.—Of the 33 deaths from small-pox, 2 were of vaccinated persons, 6 had not been vaccinated, and 25 were not reported vaccination; 5 patients were brought from Wallasey to the Birkenhead Fever Hospital.

^f 454 : 2.—Of the 14 deaths from small-pox, 13 occurred in the Union Hospital. The patients were brought from Birkenhead and they had never been vaccinated.

^g 455 : 5.—The death from small-pox was that of a female said to have been vaccinated.

^h 455 : 6.—An arrangement appears to exist between the vestry of Liverpool and the Guardians of West Derby, by which West Derby cases are sent to Liverpool Workhouse, and Liverpool small-pox cases go to West Derby.

ⁱ 456 : 2.—Of the 46 deaths from small-pox (6 of which occurred in private houses), 13 were of vaccinated persons, 20 had not been vaccinated, and 13 were not reported as to vaccination. The Registrar says the disease is increasing. See previous note 455 : 6.

458 : 3.—The death from small-pox occurred on the 3rd April; there has been no case since. The 3 deaths from diphtheria occurred in the hamlet of Haskayne in April.

459 : 3.—The death from small-pox occurred in April, and was that of a boy who had not been vaccinated. Strict precautions were taken by the local authorities, and there has been no further case.

462 : 3.—The Registrar states that during the summer heat the health of the township of Westhoughton will be endangered through a bad water supply, defective drainage, and stagnant pools.

462 : 5.—The Registrar states that Horwich requires a good water supply; that the greater part of the inhabitants have to fetch their water a long distance, from wells, &c.

463 : 2.—The Registrar says scarlet fever has been prevalent. Of the 5 fatal cases of fever, 2 were described as typhus, and 2 as typhoid.

a 464 : 2.—Small-pox has been very prevalent, but the district is now nearly free.

b 465 : 4.—The 2 deaths from small-pox were of infants under one year of age.

c 466 : 4.—Of the 29 deaths from small-pox, 11 occurred in April, 10 in May, and 8 in June; 7 were of vaccinated persons, and 10 been vaccinated.

d 467a : 1.—Of the 50 deaths which occurred at the Monsall Fever Hospital belonging to the Manchester Royal Infirmary, 44 patients from small-pox, of which 2 were stated to have been vaccinated, 16 unvaccinated, 7 exhibited no scar, and 19 were not stated as to vaccination. The above Institution receives cases both from the city of Manchester and its suburbs.

e 468 : 2.—There has been no death from small-pox since the 5th June, and the Registrar believes the disease to have abated.

f 468 : 7.—Of the 2 deaths from small-pox, one occurred at Stalybridge and one at Hurst; both deaths were of children who were for vaccination.

g 469 : 3.—There have been 8 cases of small-pox in the township of Chadderton; the patients were removed to the Oldham Workhouse where 3 died; they were represented as having been vaccinated, but no marks were observable.

a 474 : 2.—There are 3 cases of small-pox in Great Harewood, but the patients have nearly recovered.

b 476 : 2.—Of the 10 deaths from small-pox, only one occurred in June.

c 476 : 5.—Of the 8 deaths from small-pox, 4 were registered in May, and 2 in June; 4 were of persons who had no marks of vaccination.

d 478 : 3.—The slight epidemic of small-pox has now completely ceased. It is believed that the action taken by the Garstang Rural Sanitary Authority has proved very beneficial. Revaccination has been very generally adopted.

e 479 : 2.—Scarlet fever was very prevalent during the early part of June, but has now almost been stamped out.

f 479 : 3.—The 4 deaths from small-pox occurred in the Lancaster Infirmary; the first was of an unvaccinated child aged 2 years, taken out of a coal boat from Preston, the other 3 deaths occurred in June. There are at present over 30 cases of small pox in the Lancaster Infirmary, and every effort is being made to stamp out the disease, which is supposed to have been imported by the Militia either from London or Manchester.

g 490 : 1.—The 4 deaths from scarlet fever occurred in the village of Halton.

^a 532a: 1.—The Registrar attributes the low number of births to the depressed state of trade, many thousands having left the district.

^b 533: 1.—Of the 10 deaths from scarlet fever, 7 were registered in April.

^c 534: 2.—Of the 8 deaths from scarlet fever, 3 occurred in one house at Osmotherley. The disease has been very prevalent in the townships of Osmotherley and Thimbleby.

^d 540: 2.—A great number of cases of scarlet fever has occurred in the village of Heighington without any efforts having been made to prevent the disease from spreading. The ashpits, &c. are not emptied or disinfected.

^e 542: 1.—The fatal case of small-pox was sent to the hospital from a ship which had come direct from London to Hartlepool.

^f 544: 2.—Of the 23 persons aged 60 years and upwards, whose deaths were registered, 10 exceeded 80 years.

^g 546: 1.—Four of the deaths from fever occurred in May.

^h 546a: 1.—Only one of the 28 deaths from scarlet fever was registered in June.

X.—NORTHERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

c 626 : 1.—Of the 10 deaths from scarlet fever, only one was registered in June.
d 627.—See page 13, note a.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING JUNE 30TH, 1877.

By JAMES GLAISHER, ESQ., F.R.S., &c.

The weather continued exceptional till the beginning of June; the readings of the barometer were low in April and May, the temperature of the air was low from the middle of April, and the month of May came in with extreme cold weather, the highest temperature day by day for the first week was nearly 20° lower than the ordinary maximum temperature of those days, and the night temperatures were so low, that severe frosts were experienced generally, and great damage was done to all out-of-door vegetation. The weather was cold during the whole month of May, particularly on the 22nd, 23rd, and 24th. The fall of rain was in excess in April, and deficient in May and June, and there has been an unusual prevalence of E. and S.E. winds during the whole quarter.

Till April 11th the weather was warm, and the average daily excess of temperature was 3° ; on the 12th a cold period set in, and continued till June 2nd; the coldest days of this period were May 1st to May 6th, and their average deficiency of temperature was as large as $11\frac{1}{2}^{\circ}$, at many places on these days the highest temperature reached was below 50° , and at some places was below 45° ; the temperature of the air at night was at many places below 32° , particularly on the 4th and 5th, on which nights at some places it was as low as 22° and 23° , whilst the temperature of vegetation, on every night from the 1st of May to the 8th was exceedingly low; on the 1st at some places it was as low as 19° to 26° ; on the 2nd, 21° to 26° ; on the 3rd, 19° to 22° ; on the 4th, 13° to 18° ; on the 5th, 13° to 18° ; on the 6th, 16° to 21° ; on the 7th, 19° to 22° ; on the 8th, 19° to 23° ; the temperature of the air continued low till the 2nd of June, the average deficiency of temperature for the 52 days ending this day was 4° daily; from June 3rd the weather was for the most part warmer, and the average excess of temperature was $2\frac{1}{2}^{\circ}$.

The following table contains the highest and lowest temperatures of the air at the several stations from May 1st to May 6th.

TABLE of MAXIMUM and MINIMUM TEMPERATURES of the AIR at the several STATIONS on May 1st, 2nd, 3rd, 4th, 5th, and 6th.

Names of Stations.	MAY 1st.		MAY 2nd.		MAY 3rd.		MAY 4th.		MAY 5th.		MAY 6th.

From this Table it will be seen that the highest temperature on May 1st was as low as 43° at Kelstern, and was 45° at several places; on the 3rd was 42° at North Shields; on May 4th was $43^{\circ}8$ at Kelstern, and below 46° at several places; on the 5th was below 47° at several places; and on the 6th was below 50° at different places; the lowest temperature on the 1st was 26° at Eccles and Allenheads on the 2nd was $28^{\circ}5$ at Salisbury; on the 3rd was $23^{\circ}7$ at

Stonyhurst; on the 4th was $22^{\circ}0$ at Allenheads; on the 5th was 23° at Cambridge; and on the 6th was $24^{\circ}8$ at Weybridge.

The readings of the barometer in the neighbourhood of London were below their averages from the 2nd to the 9th of April (that for the 1st being $0\cdot08$ inch above); they were above their averages from the 12th to the 15th; below on the 16th, 17th, and 18th, above on the two following days; and below from the 21st to the end of the month, with the exception of the 26th and the last day, which were respectively $0\cdot02$ in. and $0\cdot20$ in. above. The mean reading for the month was $29\cdot591$ ins. being $0\cdot177$ in. below the average. Back to 1841 there are but three instances of so low a barometer reading for the month of April as that in the present year, viz.: In 1846 it was $29\cdot589$ in.; in 1848 it was $29\cdot589$ in.; and in 1849 it was $29\cdot517$ in. During the first four days of May the readings of the barometer were above their averages from the 5th to the 15th they were below, and alternately above and below on the four following days; from the 20th to the 26th, the readings were all above their average values; and from the 27th to the end of the month they were all below. The mean reading for the month was $29\cdot704$ ins. being $0\cdot084$ in. below the average. From the 1st to the 4th of June the readings of the barometer were below their averages; from the 5th to the 20th they were above, excepting the 12th, which was $0\cdot09$ in. below; on the 21st, 22nd, and 23rd they were below their averages, and from the 24th to the end of the month they were again above. The mean reading for the month was $29\cdot843$ ins., being $0\cdot030$ in. above the average.

At Greenwich the mean temperature of April above that of March was $4^{\circ}7$; that of May above that of April was $3^{\circ}5$; and that of June above that of May was $12^{\circ}4$. (From the preceding 36 years' observations the mean temperature of April above that of March is $5^{\circ}5$; that of May above that of April is $5^{\circ}6$; and that of June above that of May is $6^{\circ}1$.)

The mean temperature of the air for April above that of March over the whole country was $4^{\circ}0$; that of May above that of April was $3^{\circ}1$; and that of June above that of May south of latitude $50\frac{3}{4}^{\circ}$ was $9^{\circ}2$; between $50\frac{3}{4}^{\circ}$ and $51\frac{1}{2}^{\circ}$ was $11^{\circ}4$; between $51\frac{1}{2}^{\circ}$ and $53\frac{1}{3}^{\circ}$ was $11^{\circ}8$; and north of $53\frac{1}{3}^{\circ}$ was $10^{\circ}7$.

The mean temperature of the air for April was $45^{\circ}4$, being $0^{\circ}7$ and $1^{\circ}8$ below the averages of the preceding 106 years, and 36 years respectively. It was lower than any value back to 1861.

The mean temperature of the air for May was $48^{\circ}9$, being $3^{\circ}6$ and $3^{\circ}9$ below the averages of the preceding 106 years, and 36 years respectively. In the preceding 106 years there have been but 9 instances of so low a mean temperature for the month of May, viz.:—In 1772 it was $48^{\circ}6$; 1773, $47^{\circ}5$; 1782, $48^{\circ}1$; 1783, $48^{\circ}3$; 1814, $48^{\circ}6$; 1816, $48^{\circ}8$; 1817, $47^{\circ}9$; 1837, $47^{\circ}8$; and 1855, $48^{\circ}8$.

The mean temperature of the air for June was $61^{\circ}3$, being $3^{\circ}1$; and $2^{\circ}4$ above the averages of the preceding 106 years, and 36 years respectively. In the preceding 106 years, there are only 12 instances of so high a mean temperature in June, viz.:—In 1775 it was $62^{\circ}6$; 1776, $61^{\circ}3$; 1781, $62^{\circ}5$; 1804, $61^{\circ}3$; 1818, $62^{\circ}9$; 1822, $62^{\circ}6$; 1826, $62^{\circ}9$; 1842, $62^{\circ}9$; 1843, $65^{\circ}3$; 1857, $61^{\circ}8$; 1858, $64^{\circ}9$; and 1868, $62^{\circ}0$.

The mean temperature of the air for the quarter was $51^{\circ}9$, being $0^{\circ}4$ and $1^{\circ}1$ below the averages of the preceding 106 years, and 36 years respectively.

The mean high day temperatures of the air were respectively $3^{\circ}7$ and $5^{\circ}1$ below the averages in April and May; but $3^{\circ}9$ above in June.

NOTE.—In reading this table it will be borne in mind that the minus sign (—) signifies below the average, and that the plus sign (+) signifies above the average.

The mean low night temperatures of the air were respectively $0^{\circ} \cdot 2$ and $0^{\circ} \cdot 6$ above their averages in April and June; but $2^{\circ} \cdot 4$ below in May. Therefore the days and nights in April and May were generally cold, but warmer in June.

The mean daily ranges of temperature were respectively $4^{\circ} \cdot 0$, and $2^{\circ} \cdot 7$ below their averages in April and May, but $3^{\circ} \cdot 4$ above in June.

At Greenwich the atmospheric pressure in April was greater than in March by $0 \cdot 022$ in., in May greater than in April by $0 \cdot 113$ in., and in June greater than in May by $0 \cdot 139$ in. (From the preceding 36 years' observations the mean pressure in April is greater than in March by $0 \cdot 027$ in., that in May greater than in April by $0 \cdot 020$ in., and that in June greater than in May by $0 \cdot 025$ in.) The mean decrease of pressure from March to April south of latitude $50\frac{1}{2}^{\circ}$ was $0 \cdot 079$ in., between $50\frac{1}{2}^{\circ}$ and $51\frac{1}{2}^{\circ}$ was $0 \cdot 039$ in., the mean increase between $51\frac{1}{2}^{\circ}$ and 52° was $0 \cdot 001$ in., between 52° and $54\frac{1}{2}^{\circ}$ was $0 \cdot 058$ in.; and north of $54\frac{1}{2}^{\circ}$ was $0 \cdot 110$ in. The mean increase of pressure from April to May was nearly the same everywhere and averaged $0 \cdot 112$ in., and the mean increase of pressure from May to June over the whole country was $0 \cdot 121$ in.

The fall of rain in April was $3 \cdot 2$ ins., being $1 \cdot 5$ above the average of 62 years; in May the fall was $1 \cdot 4$ in., being $0 \cdot 7$ in. below the average; and in June the fall was $0 \cdot 7$ in., being $1 \cdot 3$ in. below the average. The fall of rain in the quarter was $5 \cdot 3$ ins. being $0 \cdot 5$ in. below the average.

In the preceding 62 years there are but seven instances of so small a fall of rain in June as in the present year, viz.:—In the year 1818 it was $0 \cdot 7$ in., in 1827 was $0 \cdot 7$ in., in 1846 was $0 \cdot 5$ in., in 1849 was $0 \cdot 3$ in., in 1855 was $0 \cdot 7$ in., in 1868 was $0 \cdot 5$ in., and in 1870 was $0 \cdot 4$ in.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter were as follows:—

Direction of Wind.	APRIL.			MAY.			JUNE.		
	Average.	1877.	Departure from Average.	Average.	1877.	Departure from Average.	Average.	1877.	Departure from Average.

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of April are opposite to the E. and S., in May to the S.E. and N.W., and in June the largest number is opposite to the E.

The minus sign (−) denotes defects below averages; the largest numbers affected with this sign in the month of April are opposite to the N. and S.W., in June to the N. and S.W., and in May the greatest deficiency is the S.W.

Thunderstorms occurred on 10 days in April, 9 in May, and 8 in June.

Thunder was heard but lightning was not seen on 6 days in April, 5 in May, and 8 in June.

Lightning was seen but thunder was not heard on 2 days in April, 1 in May, and 4 in June.

Solar halos were seen on 8 days in April, 9 in May, and 5 in June.

Lunar halos were seen on 3 nights in April, 2 in May, and 2 in June.

Snow fell on 6 days in April, and 6 days in May.

Hail fell on 10 days in April, and 7 days in May.

Fog prevailed on 14 days in April, 9 in May, and 10 in June.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING JUNE 30TH, 1877.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the sixth edition of his Hygrometrical Tables.

Names of Stations and Observers.	Height of Station Above Sea Level.	Year 1877.	Temperature of Air in Month.				Mean Temperature.		Vapour.		Mean Degree of Humidity. Sat ⁿ = 100. The highest temperatures of the air were at Salisbury, 87°·5; East Tilbury, 86°·5; Barnstaple and Streatley, both 86°·0; Royston, 85°·0 and Gloucester, 85°·5.

The lowest temperatures of the air were at Allenheads, 22°·0; Cambridge, 22°·4; Weybridge, 23°·5; Royston, 23°·6; and Stonyhurst, 23°·7.

The greatest daily ranges of the temperatures of the air were at Salisbury, 21°·7; Weybridge, 21°·6; Royston, 21°·4; Gloucester, 20°·4; Cambridge, 20°·3; and Chiswick, 20°·2.

The least daily ranges of the temperatures of the air were at Guernsey, 9°·7; North Shields, 11°·4; and Ramsgate and Liverpool both 11°·8.

The greatest number of rainy days were at Bywell, 54; Allenheads, 53; Kelstern Grange, Bradford, and Milltown, all 51; and Nottingham, 50.

The least number of rainy days were at Chiswick and Norwich, both 32; Helston and Ventnor, both 33; and Osborne, Brighton, and East Tilbury, all 34.

The heaviest falls of rain were at Truro, 10·74 inches; Allenheads, 10·33 inches; Torquay, 10·32 inches; Bermerside, 9·64 inches; and Bywell, 9·27 inches.

The least falls of rain were at Cambridge, 3·96 inches; East Tilbury, 4·81 inches; Chiswick, 4·91 inches; Camden Square, 4·92 inches; and Osborne, 4·99 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Read- ings of the Thermometer.	Mean of all Lowest Read- ings of the Thermometer.	Mean Range of Temper- ature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Max- imum in Rays of Sun.	Mean Reading of Min- imum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	RAI. Mean Number of Days it fell.

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each SUPERINTENDENT REGISTRAR'S DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

- | | | | | |
|-----------------------------|--------------------------|------------------------------|--------------------------|--------------------------|
| Aberayron, 600. | Blean, 57. | Chorlton, 465. | Evesham, 382. | Hinckley, 405. |

QUARTERLY RETURN
OF
MARRIAGES, BIRTHS, AND DEATHS
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF
ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 115.]	Marriages — <i>April, May, June, 1877.</i> Births and Deaths — <i>July, August, September, 1877.</i>	[Price 9d.]
-----------	---	-------------

*General Register Office, Somerset House,
1st November 1877.*

In the UNITED KINGDOM the *births* of 276,968 children, and the *deaths* of 144,528 persons of both sexes, were registered in the three months ending 30th September 1877. The recorded natural increase of population was thus 132,440.

The registered number of persons married in the quarter ending 30th June 1877 was 121,972.

The resident population of the United Kingdom in the middle of 1877 is estimated at 33,444,419; that of England and Wales at 24,547,309, of Scotland at 3,560,715, and of Ireland at 5,336,395. The birth-rate in the United Kingdom in the third quarter of 1877 was 32·9 per 1000, and the death-rate 17·1. The marriage-rate in the second quarter of 1877 was 14·6 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2186 Registrars in all the districts of England and Wales during the quarter ending 30th September 1877; and the MARRIAGES in 13,786 churches or chapels, in 7931 registered places of worship unconnected with the Established Church, and in 632 Superintendent Registrars' Offices, in the three months ending 30th June 1877.

The returns for the summer quarter ending September 30th are favourable. The birth-rate, lower as it usually is in summer than in winter and spring, is near the average of the season. The death-rate is extraordinarily low. It is 17·7 per 1000, and thus approaches that 17 after which the country is aspiring; it is 3·1 below the summer average. Twelve thousand lives less than in the summer of 1875, ten thousand less than in the summer of 1876, succumbed to diseases and injuries of various kinds. Infants escaped to an unusual extent; and a great part of the gain may be traced to the subsidence of diarrhoea and some other diseases which rule in the heats of summer. Small-pox is no longer predominant. Some diseases, like plants, flourish most in warm weather; and in September, when their mortality culminates, cold winds checked their development.

The decline of the mortality was greatest in the town districts; and this may be accepted as evidence of the good effects of sanitary improvements, which, when real, are followed by health as certainly as dawn is followed by daylight.

The marriage-rates in spring were below the average, and the depression implies that certain industries were less prosperous than usual.

Marriages.

During the three months ending June last, 98,108 persons were married in England and Wales, showing a decrease of 4328 from the number in the corresponding quarter of 1876. The annual marriage-rate which in the spring quarters of 1875 and 1876 had been equal to 16·2 and 16·9 per 1000, declined in the three months now under notice to 16·0; this rate was one per 1000 below the average rate in the corresponding period of the last ten years, and a lower rate than has prevailed in any spring quarter since that of 1869, when it did not exceed 15·6 per 1000. In the spring quarters of the 38 years 1838-75, the annual marriage-rate averaged 16·8 per 1000, and ranged from 15·0 in that of 1842, to 18·3 in the June quarters of 1866 and 1873.

The marriage-rate in the June quarter of this year did not exceed 11·4 and 11·8 among the principally agricultural populations of the Eastern and South-midland registration divisions, whereas it was equal to 18·4 in the North-midland, and 18·9 in the Metropolitan Divisions. The lowest county rates were 10·5 in Huntingdon, and 10·8 in Cambridge; the highest were 19·5 in Lincoln, and 19·8 in Nottingham. Compared with the corresponding quarters of 1875 and 1876, the marriage-rates in the three months ending June last showed the largest proportional decline among the population of the Northern counties, which is principally engaged in mining.

Births.

In the third or summer quarter of this year, ending 30th September last, 213,190 births were registered, equal to an annual rate of 34·5 per 1000, which was 0·9 below the rate that prevailed in the September quarter of 1876, and 0·2 below the average rate in the corresponding quarters of the ten years 1867-76. The mean annual birth-rate in the third quarters of the 38 years 1838-75 was equal to 32·8 per 1000, or 1·7 lower than the rate in the corresponding period of this year, now under notice. The sex proportion of the children whose births were registered in the quarter was 103·8 boys to 100 girls; differing but very slightly from the average proportion that has prevailed since 1837, when civil registration commenced.

The annual birth-rate in the three months ending September last, which averaged 34·5 in England and Wales, did not exceed 28·5 in the mainly agricultural population of the South-western Division, whereas it was equal to 39·3 in the Northern Division, where so large a proportion of the population is engaged in mining. The lowest county birth-rates were 24·3 in Hereford, and 27·4 in Cornwall; while the rate was 39·6 in Stafford, and 41·9 in Durham. Compared with the average numbers returned in the corresponding periods of the three preceding years, the births last quarter showed (without correction for increase of population) an increase of 4·6 per cent. in the extra-metropolitan portion of Middlesex, and of 6·0 per cent. in Leicestershire; on the other hand, the percentage of decrease was equal to 11·5 in Herefordshire, and 8·6 in Westmorland.

In twenty of the largest English towns the birth-rate last quarter averaged 36·4 per 1000, against 36·9 in the corresponding period of 1876; this was 1·9 above the average rate in the whole of England and Wales. The lowest rates in the twenty towns were 28·5 in Brighton and 31·3 in Plymouth, while the highest rates were 41·3 in Hull and 45·6 in Oldham. In fifty other large town districts the birth-rate averaged 35·8 per 1000, and was 0·6 below the rate in the twenty larger towns; in Cheltenham and Bath the rates did not exceed 23·9 and 24·6, while they ranged upwards to 44·6 in St. Helens, 44·7 in Gateshead, and 51·4 in Barrow-in-Furness. Birth-rates are mainly dependent upon the proportions of married women in the different populations living at the child-bearing ages.

The population of the borough of Salford having increased since 1871 at a far greater rate than prevailed between 1861-71, the Registrar General has to acknowledge the assistance he has received from the Mayor and Town Council of Salford, which has enabled him to calculate an estimate of the present population of the borough, undoubtedly more correct than the one that has been hitherto in use.

The new estimate, which makes the population of the borough in the middle of the year 162,978 persons, is based upon returns of the numbers of inhabited houses on the rate books of the borough on 1st July of each of the seven years 1871-77. It has been assumed that the increase of population since 1871 has been equal to the observed rate of increase of inhabited houses within the borough. Calculated upon the new estimate of population, the annual birth and death rates in Salford last quarter were 39·7 and 22·1 per 1000, instead of 45·8 and 25·6 as they would have been if calculated upon the estimate previously in use, which was based upon the rate of increase that prevailed during the last decade 1861-71. The recent under-estimate of the population of Salford only affords additional evidence of the necessity for a more frequent census enumeration in large towns, in order to afford more trustworthy bases for the important vital statistics which supply the only known means for estimating the sanitary condition of populations.

Movement of Population.

The *natural* addition to the population of England and Wales during the quarter ending September last, by excess of births over deaths registered, was 103,625, against 89,562 and 96,258 in the corresponding periods of 1875 and 1876. The *actual* increase to the population during the quarter is also affected by the balance between immigration and emigration, which is, however, unknown, as no complete record of immigration exists. Returns from the Board of Trade show that only 36,951 emigrants embarked during the three months ending September, from the various ports of the United Kingdom at which emigration officers are stationed, against numbers declining steadily from 78,348 to 40,946 in the corresponding periods of the four preceding years. The emigrants last quarter were less numerous than in the September quarter of any year since 1862, when they were 33,240. Excluding foreigners, and distributing proportionally 818 whose nationality was undistinguished, the emigrants of British origin during the quarter were 31,325, including 20,930 English, 2870 Scotch, and 7525 Irish. The proportions of emigrants to a million of the population, were 853 from England, 806 from Scotland, and 1410 from Ireland. Compared with the average proportions of emigrants during the third or summer quarters of the seven years 1870-6, emigration last quarter showed a decline of 37 per cent. in England, 50 per cent. in Scotland, and 45 in Ireland. Of the 31,325 British emigrants during last quarter, 50 per cent. left for the United States, 34 per cent. for the Australian Colonies, 11 per cent. for British North America, and 6 per cent. for all other places. Compared with the proportions which prevailed in the summer quarter of 1876, the emigrants for the United States showed a marked decline last quarter, which was balanced by a corresponding increase in the proportion of emigrants to the Australian Colonies,

Prices, Pauperism, and Meteorology.

The average price of wheat during the quarter was 62s., showing a further increase of sevenpence upon the steadily increasing average prices in the six preceding quarters; in the first quarter of 1876 the mean price was only 43s. 8d., upon which the price last quarter showed an increase of 42 per cent. In the first quarter of 1874 the average price of wheat was 62s. 2d., with which exception the price last quarter exceeded that which has prevailed in any quarter since the second of 1868, when it was 71s. 10d. The mean wholesale prices of beef and mutton averaged 6½d. and 7½d. per lb.; each price showed a slight further increase upon that which had prevailed in recent quarters, although below the mean prices in the corresponding period of 1876. The mean price of the best potatoes was 111s. 6d. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 17s. 7d. per ton, against 30s. 1d., 23s. 3d., 20s. 4d., and 19s. in the corresponding periods of the last four years. The average price of Consols was 95½l., and slightly exceeded the mean price in the preceding quarter. The minimum annual rate of discount charged by the Bank of England, which was raised to 3l. per cent. on 3rd May, was reduced to 2½l. and 2l. per cent. respectively on 5th and 12th July; on 28th August the minimum rate of discount was again raised to 3l.

The average number of paupers relieved on the last day of each week in the quarter was 648,189, of whom 139,154 received in-door, and 509,035 out-door relief. The number of in-door paupers exceeded those in the corresponding quarters of 1875 and 1876 by 13,540 and 8807, while the number in receipt of out-door relief had declined 46,374 and 8161, respectively. The number of in-door paupers last quarter showed an increase of 6·8 per cent. upon that in the corresponding period of 1876, whereas the out-door paupers had decreased 1·6 per cent.; the total number of paupers showed a slight increase equal to 0·1 per cent. During last quarter 21·5 per cent. of the total paupers, excluding vagrants and lunatic paupers in asylums, were in receipt of in-door relief; in the corresponding period of 1867 the proportion of in-door to total paupers was but 14·9 per cent. since which it has steadily increased. In the third quarter of 1870 the average number of paupers receiving relief (in-door and out-door) was equal to 41·2 per 1000 of the estimated population, whereas during the three months ending September last the proportion of the population in receipt of relief did not exceed 26· per 1000.

The remarks upon the meteorology of the quarter at the Royal Greenwich Observatory, and at 47 other stations of observation, with accompanying tables furnished by Mr. James Glaisher, F.R.S., will be found on pages 65-72. Excepting a period of genial weather from 13th to 21st August, the temperature throughout the quarter was low, chilly and unpleasant, especially from the 15th to 25th September. The mean readings of the barometer were below the average in July and August, but showed an excess in September. The mean temperature of the quarter at the Royal Observatory, Greenwich, was 58°·5 and 1°·2 below the average for the corresponding period in 106 years. The mean differed but slightly from the average either in July or August, but the mean in September was so low as 52°·5 and showed a deficiency of 3°·7. The mean temperature of September was lower than that of any September since 1803; between 1770 and 1804, however, there were four instances of a mean temperature for September lower than that which prevailed in the September of 1877. The mean temperature of the quarter at 44 stations of observation ranged from 54°·0 at North Shields, to 59°·7 at Ventnor.

The measured rain-fall of the quarter at the Greenwich Observatory was 6 inches, and was an inch below the average amount in the corresponding period of 62 years. The rain-fall in the first nine months of this year was 20 inches, and exceeded the average by 1·8 inches, owing principally to the marked excess in January and April. In July and August the rain-fall was 2·4 and 2·9 inches respectively, differing but slightly from the average amounts; in September the rain-fall only measured 1·1 inches, which was less than half the average amount. Rain was measured at Greenwich on 41 days during the quarter, of which 15 were in July, 17 in August, and 9 in September. Only nine times since 1815 has the rain-fall in September been so small as that in the present year. At the various stations of observation the number of days on which rain was measured during the quarter ranged from 30 at Brighton and Osborne, to 69 at Allenheads. The smallest measured rain-fall of the quarter at these stations was 5·25 inches at Ramsgate, while at Allenheads it amounted to 18·04 inches.

State of the Public Health; Deaths.

During the three months ending 30th September, 109,565 deaths were registered equal to an annual rate of 17·7 per 1000 of the estimated population. This death-rate was no less than 3·1 below the average rate in the ten preceding corresponding quarters. The average death-rate in the third or summer quarters of the 38 years 1838-75 was 20·6, or 2·9 in excess of the rate that prevailed last quarter, which was lower than the rate in any quarter since civil registration commenced in 1837, excepting only the remarkably cold and wet summer quarter of 1860, when the death-rate was only 17·2. The highest death-rates in the summer quarters of these 38 years were 30·6 in 1849, and 24·2 in 1854; the high rates in each of those quarters being due to the epidemic prevalence of cholera. The low death-rates which prevailed last quarter and in the corresponding period of 1860, were mainly due to the low summer temperature, which caused exceptionally low rates of infant mortality, and especially of mortality from diarrhoea.

The 109,565 deaths included 57,057 of males, and 52,508 of females; the annual death-rate was equal to 18·9 among males, and to 16·5 among females. In equal numbers living the deaths of males during the quarter were as 109 to each 100 deaths of females; in the corresponding quarters of 1875 and 1876, the relative proportions were 114 and 115 deaths of males to 100 deaths of females.

In the eleven registration divisions the annual death-rate among persons of both sexes ranged from 14·9 and 15·0 in the South-eastern and South-midland Divisions, containing mainly rural populations, to 20·7 in the North-western Division, in which the population is chiefly employed in manufacture and mining. The lowest county death-rates were 12·9 in the extra-metropolitan portion of Surrey, 13·2 in Dorset, and 13·4 in Herts; the highest county rates were 20·5 in Leicester, and 21·3 in Lancashire. In equal numbers living, therefore, the deaths last quarter in Lancashire were as 165 to each 100 in the extra-metropolitan portion of Surrey. Even these figures, however, understate the true excess of mortality in Lancashire, where the age distribution of the population should cause a lower rate of mortality than the age distribution in the population of the extra-metropolitan portion of Surrey.

In the entire urban population of England and Wales the death-rate in the quarter was equal to 19·2 per 1000, whereas in the remaining or rural population it did not exceed 15·7; the urban rate was no less than 4·2, and the rural rate 1·5 per 1000 below the average rates in the corresponding quarters of the last three years. Both the urban and the rural rates last quarter were considerably lower than those which have prevailed in any quarter since the third of 1860. In equal numbers living the deaths in the urban districts were as 122 to 100 in the rural districts; the average proportion in the September quarters of the ten years 1867-76 was 136 to 100. To the exceptionally low mortality from diarrhoea in town populations last quarter was due the marked reduction in urban death-rates.

In twenty of the largest English towns, including London, with an estimated population of above seven millions of persons, the death-rate averaged 20·5 per 1000, against 23·1 in the corresponding period of last year; the rate exceeded the general urban rate by 1·3. The rates in the twenty towns ranged from 17·5 and 18·1 in Sheffield and Portsmouth, to 23·9 in Manchester, 25·1 in Leicester, and 25·3 in Liverpool. Leicester suffered severely from its annual scourge of infantile diarrhoea, and in Liverpool the general zymotic fatality was excessive. In fifty other English and Welsh town districts, with a population little short of three million persons, the death-rate averaged only 18·1 per 1000, whereas in the three preceding corresponding quarters it had been equal to 23·4, 21·4, and 20·4. The average rate in the fifty towns was 2·4 per 1000 below the rate in the twenty towns. The lowest rates in the fifty town districts were 11·8 in Cheltenham, 12·3 in Reading, and 14·4 in Colchester; the rates in the other town districts ranged upwards to 23·6 in Stockport, 24·0 in Shrewsbury, 25·4 in Exeter, and 26·2 in Wigan. These excessive rates were mainly due to the fatal prevalence of zymotic diseases. In the remaining urban population, consisting of about four millions and a half of persons living in smaller towns, the rate was equal to 17·8 per 1000, and was only slightly below the average rate in the fifty town districts. Compared with rates which prevailed in the corresponding period of last year, those last quarter showed a decline of 11·3 per cent. in the twenty largest towns and in fifty other town districts, and of 12·7 per cent. in the remainder of the urban population. The decline in the general death-rate of England and Wales was equal to 9·7 per cent.

MORTALITY AT DIFFERENT AGES.—The 109,565 deaths at all ages included 29,376 of infants under one year of age, 54,674 of persons aged between one and sixty years, and 25,515 of persons aged upwards of sixty years. The deaths of infants under one year were equal to 138 per 1000 births registered. Infant mortality measured in this manner was 24 per cent., or nearly a quarter, below the average rate in the seven preceding corresponding quarters, which was equal to 182 per 1000 births; in other words, nearly ten thousand children under one year of age in England and Wales survived the summer quarter of this year, who must have died had the rate of infant mortality equalled the average

rate. In the summer quarter of the seven years 1870-6 the proportion of deaths under one year to births ranged from 200 per 1000 in 1870, to 172 in 1876. The summer rate of infant mortality in England has showed a decided decline in recent years, without taking into account the exceptionally low rate which prevailed during the past summer quarter. The rates of infant mortality last quarter, however, showed the usual wide divergence in different sections of the population; they ranged from 103 and 109 in the South-western and Welsh registration divisions, to 151 and 152 in the North-western and North-midland divisions. The rates in the agricultural counties of Wilts and Dorset were as low as 75 and 76 per 1000, whereas they ranged upwards to 147 in Durham, 154 in Norfolk, 156 in Lancaster, 167 in Nottingham, and 200 in Leicester. The largest excess of infant mortality is found in urban populations, and this excess is proportionally greatest in the summer quarter, when it is mainly dependent upon the fatality of diarrhoea. In the twenty largest English towns last quarter the rate of infant mortality averaged 177 per 1000, against 224 in the corresponding quarter of last year; while it did not exceed 120 and 136 in Oldham and Bradford, it was equal to 223 in Liverpool, 226 in Hull, 227 in Nottingham, and 304 in Leicester. Thus the deaths of infants under one year of age, measured by their proportion to births registered, were last quarter as 253 in Leicester to 100 in Oldham. Difference of opinion still prevails as to the actual causes of this startling sacrifice of infant life in Leicester, and it is due to the reputation of the women of this town, as careful and intelligent mothers, that these causes should be further investigated and removed. One more notable contrast may be mentioned; while in Rochdale infant mortality was but 89 per 1000, the rate in Wigan was 256. Thus the proportion of deaths under one to births was 288 in Wigan to 100 in Rochdale, or nearly as three to one.

The annual rate of mortality during the quarter among children and adults aged between one and 60 years was equal to 9.9 per 1000, against 11.6, 11.0, and 10.7 in the three preceding corresponding quarters; the average rate at these ages, in the summer quarter of the seven years 1870-6 was 11.2. In the twenty largest towns the annual death-rate between one and 60 years averaged 11.6 per 1000 last quarter, and ranged from 8.7 and 8.8 in Portsmouth and Norwich, to 15.1 and 15.9 in Liverpool and Manchester.

Among persons aged upwards of 60 years the annual rate of mortality in England and Wales during the three months ending September last was equal to 55.2 per 1000 persons living at those ages, against 55.8 the average rate at the same ages in the seven preceding corresponding quarters. The lowest summer death-rate among persons aged over sixty years was 54.8 in 1871 and 1875, and the highest rate was 57.3 per 1000 in 1874. In the twenty large towns the death-rate among persons at these ages averaged 58.4 per 1000, and while it did not exceed 52.3 in Brighton and 53.5 in Bristol, it was equal to 70.3 and 72.4 in Manchester and Sunderland respectively.

As bearing upon the effect of a cold summer upon the health of persons living at different ages, it may be noted that the mortality at all ages last quarter, after due allowance for the increase of population, was 13.7 per cent. below the average mortality in the seven preceding summer quarters. The decline of mortality was equal to 24.2 per cent. among infants under one year of age, and to 11.6 per cent. among persons aged between one and sixty years, while the decline was but 1.1 per cent. among persons aged upwards of sixty years.

ZYMOTIC MORTALITY.—The 109,565 deaths from all causes in England and Wales, during last quarter, included 8136 which were referred to diarrhoea, 283 to scarlet fever, 2190 to whooping-cough, 2100 to fever, 1539 to measles, 516 to small-pox, and 473 to diphtheria; in all, 17,784 deaths resulted from these seven principal zymotic diseases, equal to an annual rate of 2.9 per 1000, which was very considerably below the rate in any of the corresponding summer quarters of the seven years 1870-6, and 1.9 below the average zymotic rate in those seven quarters. The marked reduction in the zymotic death-rate last quarter was due to the exceptionally low fatality of summer diarrhoea; the mortality from the six other diseases was, however, nearly 30 per cent. below the average rate of mortality.

in the seven summer quarters of the years 1870-6. The death-rate last quarter from these seven zymotic diseases was equal to 1·8 and 2·0 in the South-midland and South-western, to 3·9 in the Metropolitan, and 4·1 in the North-western registration Divisions. In Dorsetshire and Herefordshire the zymotic rate did not exceed 0·9 and 1·0, whereas it was equal to 3·4 in Staffordshire, 3·8 in Warwickshire, and 4·2 in Lancashire. In the twenty large English towns the rate from these diseases averaged 4·4 per 1000 (almost identical with the rate in the county of Lancaster); it was lowest, (3·1) in Sheffield, Bradford, and Newcastle-upon-Tyne, and ranged upwards to 6·6 in Liverpool and Leicester, and 6·8 in Wolverhampton. Whooping-cough and diarrhœa caused the high rate in Liverpool, diarrhœa was exceptionally fatal in Leicester, and scarlet fever caused the high zymotic rate in Wolverhampton. In fifty other large town districts the zymotic rate averaged 3·2; the lowest rates were 0·7 and 1·0 in Swansea and Cheltenham, while the rate was equal to 5·4 in Preston, 5·9 in Shrewsbury, 6·1 in Yarmouth, 6·2 in Bolton, 8·1 in Wigan, and 9·5 in Exeter. Scarlet fever was fatally epidemic in Shrewsbury, Bolton, Wigan, and Exeter, and the high zymotic rate was due to diarrhœa in Yarmouth, and to whooping-cough and diarrhœa in Preston.

Diarrhœa.—In the summer quarter of the year the fatality of diarrhœa claims attention prior to that of any of the six other principal zymotic diseases. Although opinions differ as to the causation and correct nosological classification of infantile summer diarrhœa, few who are acquainted with the remarkable variations in its fatal incidence, and with its special prevalence in urban populations, can doubt that it is a veritable “filth disease,” and that the mortality due to it is directly the result of defective sanitary condition, in the largest sense of that term. During last quarter 8136 deaths were referred to diarrhœa in England and Wales, equal to an annual rate of only 1·31 per 1000, whereas the death-rate from this disease in the seven preceding corresponding quarters averaged 2·53, the lowest being 2·23 in 1874, and the highest 3·11 in 1870. The temperature in July and August was moderate, differing but slightly from the average, while in September it was exceptionally low. During the quarter there were only four days on which the highest reading of the thermometer in the shade touched 80°, whereas in June there were eight days on which this temperature was recorded. The past summer quarter has been the coldest on record since the memorable cold and wet summer quarter of 1860; the death-rate from diarrhœa was also very considerably lower than in any summer quarter since 1860. Cold summers, such as those of 1860, 1862, and 1877, cause low death-rates from diarrhœa, and it is equally certain that hot summers, like that of 1868, cause excessive rates from the same disease. That heat, however, is not the sole controlling element in the causation of diarrhœa fatality must be patent to any one who studies the recorded death-rates from this disease in a series of years, and in different localities. This conclusion will be strengthened by a consideration of the variations in the death-rate from diarrhœa in various parts of England and Wales during the past summer. It has been stated that in the whole of England and Wales the diarrhœa rate averaged 1·31 per 1000; it ranged from 0·39 and 0·67 in the Welsh and South-western, to 1·55 in the North-midland, 1·84 in the North-western, and 1·98 in the Metropolitan registration Divisions. In Dorsetshire and Wiltshire the death-rate from diarrhœa did not exceed 0·31 and 0·32 per 1000, whereas it was equal to 2·03 in Lancashire, 2·79 in the East Riding of Yorkshire, and 2·90 in Leicestershire. Diarrhœa fatality usually bears a defined relation to the proportion of the population living in urban districts; it may be noticed, however, that the rate from diarrhœa last quarter in London, the population of which is entirely urban, was considerably lower than that which prevailed either in Lancashire, in the East Riding of Yorkshire, or in Leicestershire, each of which has, of course, a considerable proportion of rural population. Among the fourteen millions of persons living in the town districts, the annual death-rate from diarrhœa last quarter was equal to 1·8 per 1000, whereas in the remaining or rural population of about ten millions it did not exceed 0·8. In twenty of the largest English towns the rate averaged 2·3 per 1000, against 4·5, 3·8, 3·5, and 3·9 in the corresponding quarters of the four preceding years; in fifty other large towns it was equal to 1·5, and less than half the rate which prevailed either in 1875 or 1876. In the whole of England and Wales, exclusive of the seventy large towns, the diarrhœa rate did not exceed

0·8 per 1000, against 1·6 in the corresponding period both of 1875 and 1876. The proportional decline in the fatality of diarrhoea last quarter was not so large in the twenty large towns, as in the remainder of England and Wales. The rate ranged from 1·4 both in Bristol and Bradford, to 3·4 in Portsmouth, 4·6 in Hull, and 5·6 in Leicester. It is important to note, that while the rates last quarter in the three south-coast towns, Portsmouth, Brighton, and Plymouth, were actually higher than those which prevailed in the summer of 1876, the rates showed a marked decline in each of the other towns, and in Wolverhampton, Manchester, Leeds, and Sheffield scarcely exceeded a third of the rates which prevailed in the summer of 1876. The same marked variations and contrasts may be observed in the diarrhoea rates prevailing in the fifty town districts, which ranged from 0·2 in Swansea, and 0·3 both in Merthyr Tydfil and Halifax, to 3·8 in Preston, 4·0 in Wigan, and 5·4 in Yarmouth. The rates in Dover, Hastings, Reading, and Ashton-under-Lyne, exceeded the rates in the summer of 1876, whereas the rate showed a marked decline in most of the other towns, especially in Halifax and Swansea. Among the seventy large towns specially dealt with, Leicester and Yarmouth, as in recent years, again stand out conspicuously as suffering from exceptionally high death-rates from diarrhoea, equal to 5·6 and 5·4 per 1000. Other causes than those embraced by the theory that summer diarrhoea is merely dependent upon temperature, must be assigned for such diarrhoea fatality as that suffered year after year by the infant population of Leicester and Yarmouth.

The deaths referred to *simple cholera* and *choleraic diarrhoea* were 190, against 323 and 433 in the two preceding corresponding quarters; of these 79 occurred in London, 25 in Lancashire, and 25 in Yorkshire. There appears to be considerable difference of opinion among medical practitioners as to the diagnosis of infantile cholera and infantile summer diarrhoea, for the purpose of medical certificates of the cause of death.

The 2830 deaths from *scarlet fever* slightly exceeded the number in the preceding three months, but were with this exception fewer than in any quarter since the end of 1873. Whereas the fatality of scarlet fever showed a marked increase last quarter in London, and the West-midland, and South-midland divisions, a decline of fatality fully as marked occurred in the Northern and North-midland divisions, where it was lower than in any quarter since the beginning of 1870. The annual death-rate from scarlet fever in England and Wales last quarter was equal to 0·46 per 1000, while in the seven preceding corresponding quarters it averaged 0·74; the highest rate from scarlet fever in these seven summer quarters was 1·32 in 1870, and the lowest 0·42 in 1872. In the Eastern counties the rate was so low as 0·15, and in Suffolk only 9 fatal cases were registered, equal to a rate of 0·10; in Devonshire the rate was so high as 1·20, and in Staffordshire 1·42 per 1000. Among the twenty largest towns the death-rate from scarlet fever averaged 0·43, and was slightly below the average rate in the whole of England and Wales, although somewhat in excess of the rate in the preceding three months; the disease showed fatal prevalence in Manchester and Bradford; and in Wolverhampton yielded a rate equal to 4·8 per 1000. Among the fifty other town districts, scarlet fever showed exceptional epidemic fatality in Exeter, Shrewsbury, and Wigan. In Exeter the fatality of scarlet fever was scarcely so severe as it had been in the preceding three months, yet the annual death-rate from the disease was equal to 6·5 per 1000 during the six months ending September last. The constant recurrence of zymotic epidemics in Exeter should engage the earnest attention of the Urban Sanitary Authority. Exeter is an unhealthy city. Among other localities in which the returns for last quarter show the fatal prevalence of scarlet fever, the following may be noted:—the Local Board Districts of Dartford and Banbury, the parish of Bradninch (Devon), St. Austell and the neighbouring parish of Mevagissey, the parish of Audley (Newcastle-under-Lyme), the parish of Norton (Leek), the boroughs of Bewdley and Droitwich, Hoyland (near Barnsley), Coleford (Monmouth), the borough of Haverfordwest, and the Local Board District of Bethesda, near Bangor.

Whooping-cough caused 2190 deaths during last quarter, equal to an annual rate of 0·35 per 1000; this rate considerably exceeded that which prevailed in the summer quarter of last year, but scarcely differed from the average rate in the

corresponding period of the seven years 1870-76, in which the rate ranged from 0·28 to 0·48. The rate last quarter was only 0·12 in the agricultural population of the South-midland division, whereas it was equal to 0·62 in the population of the North-western division, which is mainly engaged in mining or manufacture. In Lancashire the rate from this disease was equal to 0·69, while in London it did not exceed 0·38; the disease was especially fatal in Liverpool. Whooping-cough also showed exceptional fatal prevalence in Taunton and Tredegar.

The continued steady decline of the mortality from *fever* (including typhus, enteric or typhoid, and simple or undistinguished forms of fever), supplies a triumphant reply to those who assert that English mortality statistics afford no evidence of sanitary progress. During the three months ending September last 2100 deaths were referred to fever, a number which, notwithstanding the increase of population, was considerably below that returned in any quarter for which records are available. The annual death-rate from fever during last quarter was equal to 0·34 per 1000, whereas in the seven preceding corresponding quarters the rate had declined from 0·82 in 1870 to 0·40 in 1876, and the average rate in these seven summer quarters had been 0·56. Fever mortality, therefore, and it may be also presumed the prevalence of fever, during last quarter was 39 per cent. below the average mortality which prevailed in the September quarters of the seven years 1870-76. The death-rate from fever last quarter did not exceed 0·22 per 1000 in the Eastern, while it was equal to 0·43 in the North-western and 0·46 in the Welsh divisions; in Lancashire the rate was equal to 0·44 per 1000, while in London with its entirely urban population of more than three and a half millions it did not exceed 0·33. In twenty of the largest towns the fever rate in the quarter averaged 0·37, and but very slightly exceeded the general rate in England and Wales; the rates in Wolverhampton and Leicester were as low as 0·05 and 0·07, and the highest fever rates were 0·62 and 0·69 in Sunderland and Portsmouth. The fatal prevalence of fever, mainly of the enteric or typhoid type, showed a marked excess during the quarter in the following places:—Peterborough, Tollesbury (Essex), Exeter, Ilminster, Cradley (Worcestershire), Bromsgrove, Nuneaton, Lincoln, Great Grimsby, Winterton (Lincolnshire), Newton-in-Makerfield, Bedale, Bishop Auckland, Heworth (near Gateshead), Llanelly, and Kenarth sub-district of Newcastle-in-Emlyn.

Measles usually shows the lowest rate of mortality during the summer quarter of the year, and during the three months ending September last only 1539 deaths were referred to this disease, against 1811 and 2730 in the two preceding quarters. The annual death-rate from this disease was equal to 0·25 per 1000, and exactly corresponded with the average rate in the seven preceding summer quarters, in which it ranged from 0·36 in 1874 to 0·19 in 1875. The rate last quarter was but 0·08 in the South-eastern counties, while in Monmouthshire and Wales it was equal to 0·56. The fatality of measles was excessive in Wellingborough, in some parts of Bristol, Hyde (Cheshire), Lancaster, Hunslet (Leeds), Tredegar and Aberystwith, Pontypool, Cardiff, and Pontypridd.

The fatal cases of *small-pox*, which had been 1943 and 1416 in the first two quarters of the year, declined to 516 in the three months ending September last, and were fewer than in any quarter since the three months ending June 1876. The 516 registered last quarter included 304 in London and its suburban districts, 89 in Lancashire, and 43 in Cheshire, while but 80 fatal cases were recorded in the rest of England and Wales. Excepting the increase in the West-midland and North-midland, the deaths from small-pox last quarter showed a considerable decline in all the registration Divisions. The annual death-rate from small-pox during the quarter, to 1000 living, was equal to 0·28 in Greater London, 0·11 in Lancashire, and 0·29 in Cheshire; in all other parts of England and Wales it did not average more than 0·02 per 1000. No fatal case of small-pox was registered in fourteen English counties, or in eleven of the twenty largest towns. The disease caused 6 deaths in Croydon, 6 in Brighton, 38 in West Ham, 6 in Orsett (Essex), 12 in Newark, 16 in Altrincham, 46 in Liverpool, 16 in Birkenhead, and 11 in Manchester. In registration London the small-pox deaths, which had been 1192 and 828 in the first two quarters of the year, declined to 252.

To *diphtheria* 473 deaths were referred last quarter, equal to an annual rate of 0·08 per 1000. The fatality of diphtheria was lower than in any quarter since the third of 1872. The returns, however, show local outbreaks of this disease in the following places :—Ross, Shepley (Huddersfield), and the Rural Sanitary District of Sculcoates (Hull).

DEATHS IN PUBLIC INSTITUTIONS.—In workhouse establishments, hospitals, and public lunatic asylums, 10,313, or 9·4 per cent. of the deaths were registered during last quarter; this proportion considerably exceeded that which prevailed in any of the seven preceding corresponding quarters. In the twenty largest towns 5244, or 14·5 per cent. of the deaths were recorded in public institutions; the percentage ranged from 4·1 and 5·8 in Plymouth and Oldham, to 16·7 and 18·2 in Brighton and London. Excluding the twenty large towns, the proportion of institution deaths in England and Wales during last quarter averaged 6·9 per cent. During the seven years ending 1875 the proportion of deaths recorded in workhouse establishments averaged 5·6 per cent. of the total deaths.

VIOLENT DEATHS.—The deaths referred to different forms of violence during the quarter were 4086, and were considerably fewer than in any preceding three months since June 1873; they were equal to an annual rate of 0·66 per 1000 persons living, and to 3·7 per cent. of the deaths from all causes. In the mainly agricultural population of the Eastern counties the death-rate from violence did not exceed 0·51 per 1000, whereas it was equal to 0·84 in the Northern counties where a large proportion of the population is engaged in mining. In the twenty large towns the death-rate from violence averaged 0·72 per 1000, and while it was but 0·34 and 0·35 in Sheffield and Brighton, it ranged upwards to 1·24 and 1·26 respectively in Newcastle-upon-Tyne and Liverpool.

INQUESTS.—During the three months ending September last, 5940 deaths were registered from the certificates of coroners, equal to 5·4 per cent. of the total deaths; this proportion differed but slightly from that which prevailed in recent corresponding quarters. In the twenty large towns the per-centage averaged 5·8; and while it was but 2·4 and 3·2 in Sheffield and Brighton, it was equal to 7·1 in Birmingham and in Newcastle-upon-Tyne, and to 8·4 per cent. in Manchester. In Manchester the inquest cases were nearly three times as numerous as the deaths referred to violence, while in Sheffield only 30 inquests were held although 24 deaths resulted from violence.

HEALTH OF SHREWSBURY.

The towns on the Severn have a character of their own, influenced to some extent by the peculiarities of that affluent river which carries its waters from the mountains of Wales through fertile lands to the Bristol channel. Floods are extensive and not infrequent. Shrewsbury, Worcester, and Gloucester are county towns on its banks; and among them Shrewsbury has the most picturesque site. During the three decennials ending in the year 1870, the mortality of Shrewsbury district was at the rate of 26 per 1000 of population in 1841-50; of 25 in 1851-60; of 26 in 1861-70. After a correction for the county lunatic asylum, the rates are reduced by *one* in each of the two last decennials to 24 and 25. This was far from a satisfactory state of things. It is not the fault of the climate, and the town itself has an area of 5·7 square miles, with many admirable building sites.* The mortality in the surrounding Atcham district was 18, 18, and 17 in the same decennials. The excessive mortality of the town was due to small-pox, measles, scarlet fever, whooping-cough, typhus and typhoid fevers, diarrhoea, brain, lung, stomach, and liver diseases, which abound most where the waters are at all impure, where houses

* The district of Shrewsbury comprising the two sub-districts of St. Mary and St. Chad, has been united into one union with Atcham, but for statistical purposes it has been kept apart. It extends over a large part of the country around, for the area of the two parishes to which the rates apply is set down in the census at 18,032 acres; whereas the area of the borough proper is 3674 acres. The population in the borough in 1871 was 23,406, in the parts outside the borough 2378. This inclusion of so much of the country reduces the mortality of the Shrewsbury in the Registrar-General's Returns below that of the municipal borough.

or courts are crowded, and sewerage is imperfect. The town has taken an enlightened view of its own interests, and is contemplating, under the advice of its excellent Health Officer, important improvements. The Council has bought up the water company, so the water supply can be improved; and the sewerage, which is attended with some engineering difficulties, will no doubt be dealt with effectually. The gross mortality in the six years 1871-6 was reduced to 23, which might be reduced further by corrections. The annual mortality of young children under five years of age was reduced from 70 per 1000 in 1861-70, to 55 in the last six years. In the same two periods the mortality of children in the Atcham district, including the numerous parishes surrounding Shrewsbury, fell from 36 to 29 per 1000. So Shrewsbury has still much way to make up; and it is true that the tide turned in 1877, when scarlet fever prevailed, and the mortality ran up to the old rate of 26, or corrected, 25, in 1000. But the Town Council is alive to this; and instead of being discouraged, will no doubt accelerate the measures now well understood for the improvement of their ancient historical town, so that at the end of the decenniad the inhabitants may be as healthy as their neighbours, and then Shrewsbury will be the most salubrious county town on the Severn.

HEALTH OF FOREIGN CITIES.

A summary of the weekly returns with which the Registrar General is favoured by various local authorities abroad shows that the average annual death-rate during the third quarter of this year, in thirty Indian and Foreign cities, was 31·8 per 1000, against 20·5 in twenty of the largest English towns. The population of these thirty Foreign cities is estimated at rather more than eleven millions of persons. The lowest death-rates in these cities were 19·0 and 21·0 in Christiania and Copenhagen; whereas the rate was equal to 51·0 in Alexandria, 53·2 in Bombay, and 125·4 in Madras. The 12,419 deaths in Madras included 3010 from dysentery, 1131 from cholera, and 943 from small-pox; thus excessive zymotic fatality is partly attributed by the Medical Officer to the immigration of crowds of half-starved fugitives from the surrounding famine-stricken districts. In Calcutta 218, and in Bombay 1129 deaths were referred to cholera. Typhoid fever caused 322 deaths in Paris during the quarter, against 386 and 212 in the two preceding quarters; in Paris the annual death-rate from this disease was equal to 0·65 per 1000, while it was only 0·23 in London. In St. Petersburg and Philadelphia typhoid fever was especially fatal. Small-pox was more or less prevalent in Madras, Brussels, and Vienna, though in each of these towns the fatal cases showed a considerable decline from those in the preceding three months. In Berlin 269 deaths resulted from scarlet fever; this disease also prevailed in Stockholm, Brooklyn, and Philadelphia. To diarrhoea or diarrhoeal diseases 3111 deaths were referred in Berlin, 460 in Munich, 2675 in New York, and 1193 in Brooklyn. Whooping-cough caused 130 deaths in Alexandria.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1867-77**, and in each Quarter of those Years.

				Dec. -	17·7	18·4	19·0	19·2	19·5	17·6	17·9	20·2	18·9	17·3	18·6	—	

Note.—The three months January, February, March, contain 90, and in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction is made in calculating the rate of mortality in the different quarters of the year. The annual rate is the mean of the four quarterly rates.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns (except for Salford) are the numbers enumerated in April 1871, raised to the middle of 1877 by the addition of six and a quarter years' increase, calculated on the rate which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in April 1871.

† It having been represented to the Registrar General that owing to an abnormally rapid increase since 1871, the estimate of the present population of the borough of Salford, based upon the rate of increase which prevailed between 1861 and 1871, was too low, a new estimate is now adopted, the basis of which is a return of the numbers of inhabited houses on the rate-books of the borough in the middle of each of the six years 1871–6, with which the Registrar General has been favoured by the Mayor and Town Council of Salford. The present estimate for the middle of this year exceeds that hitherto in use by no less than 21,794 persons.

TABLE VII.—Deaths in 20 large English Towns in the 13 Weeks ending 29th September 1877.
(Estimated aggregate population in middle of 1877, 7,055,612; viz., 3,533,484 in London, and 3,522,128 in the 19 other Towns; see note to Table VI.)

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in last column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District.

* For method of framing these estimates see note * to Table VI. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesborough have been based upon local information as to the increase of the inhabited houses in these boroughs.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situate outside that area.

TABLE X.—Annual Death-rate from Diarrhoea in ENGLAND, and in 70 LARGE TOWNS, during the Third Quarter of each of the Years 1875, 1876, and 1877.

ROMFORD (<i>part of</i>) - - -	16,783	195	64	6	46·6	15·3	

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1871 and 1877; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring.

TABLE XIII.—**Births and Deaths in the Third Quarter of 1877 in 30 Foreign Cities.**

TOWNS.	POPULATION (enumerated or estimated).	BIRTHS. Exclusive of Stillborn.	DEATHS.	ANNUAL RATE per 1000 Persons living.		DEATHS FROM EPIDEMIC DISEASES.

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page 14, note.

NOTE.—The Registrars alone must be considered responsible for the correctness of their returns, and for the opinions expressed in the footnotes.

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND. of INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also INQUEST CASES and in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and of ENGLAND.

^a The Superintendent Registrars' Districts are collections of contiguous Parishes or Places, nearly always identical with the Poor Unions of the same names; they are 631 in number, and are here arranged topographically under the Registration Counties.

^b These figures were furnished to the Registrar-General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

^c See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS—continued.

Superintendent Registrars' Districts.		Area in Statute Acres.	Enumerated Population, 1871.	Marriages Registered in Quarter ending 30 June 1877.	Births Registered in Quarter ending 30 Sept. 1877.	Deaths		The DEATHS in the Quarter are stated by the Registrars to include													
								Deaths of	Deaths from												
									Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.
						Average in Quarters ending 30 Sept. in the 3 Years 1874-76.

* The Superintendent Registrar's district of Presteigne (numbered 607) has been abolished from the 1st July 1877 and the parishes comprised therein have been added to the Superintendent Registrars' districts of Kington (343) and Knighton (608). To the last-named Superintendent Registrar's district the four marriages registered in the Presteigne district during the quarter ending 30th June have been added in this table.

b The present number of Superintendent Registrars' districts is 631. The above numerical arrangement—1 to 627—was adopted on 1st January 1871. Six new Superintendent Registrars' districts, viz., Fulham (1a), Prestwich (467a), Barrow-in-Furness (481a), Middlesbrough (532a), Lancaster (546), and Pontardawe (587a), have been constituted since 1871; and two Superintendent Registrars' districts have been abolished, viz., Shrewsbury (352), which has been incorporated with Ateham (351), and the parishes forming the district of Presteigne (607) have been added to the Superintendent Registrars' districts of Kington (343) and Knighton (608).

^a The Registration Sub-districts (2186 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

^b For London the numbers of Births and Deaths, as well as the details given, "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 1st July to 29th September 1877.

I.—LONDON.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1871.	Births		Deaths		The DEATHS in the Quarter are stated by the Registrars to include ^a

^a 111: 1.—Of the 8 deaths from scarlet fever, one was registered in August and 7 in September. Every precaution has been taken by the sanitary authority to prevent the spread of the disease.
^b 113: 2.—The sanitary authority is taking energetic action to stop the progress of small-pox.
^c 114: 4.—The inmates (eight in number) of a cottage in the parish of Marsh Baldon were attacked with scarlet fever, but the disease was confined to the house in which it appeared.
^d 117: 3.—There are no further cases of small-pox, and scarlet fever is declining.
^e 124: 3.—Of the 43 deaths in Public Institutions 39 occurred in Hanwell Lunatic Asylum.

III.—SOUTH MIDLAND COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

a 282 : 3.—Fever has been very prevalent in the town, but is now abating.
b 283 : 1.—Of the 15 deaths from scarlet fever, 13 occurred in the parish of Bradninch. The schools are closed. The town water has been analyzed and found to be pure. Much has been done by order of the sanitary inspector in cleansing, whitewashing, disinfecting and removing nuisances, and active steps are also being taken for the further improvement of the sanitary condition of Bradninch.
c 285 : 1.—Cases of typhoid fever are reported in the parish of Pilton.
d 285 : 6.—The 2 deaths from scarlet fever occurred in the same family, residing in the parish of Horwood. The disease is supposed to have been imported by a visitor from Exeter.
e 287 : 1.—The Registrar says the low number of deaths registered, is probably the result of a general drainage of the town and a good water supply from the country.

a 327 : 4.—The deaths from scarlet fever occurred in the hamlet of Barton St. Mary.

b 329 : 4.—Of the 10 deaths from scarlet fever, 4 were registered in August, and 4 in September.

c 329 : 7.—Early in September an outbreak of small-pox occurred in the parish of Horsley. There were 18 cases, and 3 deaths. No fresh case has been declared since the 21st September. The energetic action of the sanitary authority no doubt prevented the disease from spreading further. Re-vaccination has been largely resorted to.

d 336 : 3.—No death from scarlet fever was registered during the month of September.

^a 351: 8, 9.—The sub-districts of St. Mary and St. Chad, which formed the district of Shrewsbury previously to 1st October 1871, were on that date annexed, without change in their limits, to Atcham. The workhouse in St. Chad sub-district (351: 9) has been discontinued since 25th March 1875.

^b 351: 8.—Of the 26 deaths from scarlet fever, 5 were registered in July, 13 in August, and 8 in September.

^c 360: 1.—Of the 12 deaths from scarlet fever, 9 were registered in September; the Registrar adds that he has registered 16 more deaths from the same disease during the first half of October.

^d 361: 3.—The 11 deaths from scarlet fever occurred in Dresden and Florence, near Longton where it has been very prevalent for the last two months.

^e 362: 3.—The 14 deaths from scarlet fever occurred in the parish of Audley; 3 were registered in July, 7 in August, and 4 in September.

^f 363: 2.—Ten of the deaths from scarlet fever were registered in September.

^g 363: 3.—Scarlet fever still continues.

VI.—WEST MIDLAND COUNTIES.—REGISTRATION SUB-DISTRICTS—*continued.*

a 376 : 1.—Of the 10 fatal cases of fever, 5 were described as typhoid, and occurred in Cradley.
b 377 : 4.—Nine of the deaths from scarlet fever were registered in September; the disease is not confined to any particular locality.
c 377 : 5.—Of the 26 deaths from scarlet fever, 24 occurred in the borough of Bewdley.
d 384 : 3.—The deaths from scarlet fever occurred principally in the urban portion of the district, and the houses have been inspected by the inspector.
e 387 : 1.—The 7 deaths in Public Institutions occurred in the Children's Hospital.
f 387 : 2 and 6.—On the 1st October 1876 the sub-district of St. Philip (then numbered 387 : 4) was enlarged by the addition thereto of the division of the civil parish of Birmingham which up to that date formed the sub-district of St. Paul. The sub-district of St. Philip has been abolished from the 1st July 1877, and that division of the civil parish of Birmingham which prior to 1st October 1876 formed the St. Paul's district (population 7394 in 1871) has been added to All Saints sub-district (387 : 6), and the division of the civil parish which formed the St. Philip's sub-district (population 7779 in 1871) prior to 1st October 1876 has been added to St. Thomas' sub-district (387 : 2). The sub-districts of St. Mary, St. George, and All Saints have been, in consequence of the above alterations, re-numbered.

VI.—WEST MIDLAND COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1871.	Births		Deaths		The DEATHS in the Quarter are stated by the Registrars to include

^a 447 : 2.—Of the 14 deaths from small-pox, 5 occurred in July, 5 in August, and 4 in September; 9 were of persons who had not been vaccinated.

^b 447 : 4.—The 2 deaths from small-pox occurred in the workhouse hospital.

^c 449 : 3.—No death from small-pox was registered in September; of the 6 deaths which occurred previously, 3 were of vaccinated persons, and 3 had not been vaccinated.

^d 452 : 4.—The deaths from scarlet fever occurred at Cymman in the parish of Hope, the last on the 20th August.

^e 454 : 1.—Of the 16 deaths from small-pox, 7 occurred in July, 7 in August, and 2 in September. One was of a vaccinated person, 7 had not been vaccinated, and 8 were not reported as to vaccination.

^f 454 : 2.—Of the 4 deaths from small-pox, 3 occurred in the Union Hospital. The 2 deaths from fever also occurred in the Union Hospital; the patients were brought from Birkenhead.

^g 455 : 1.—The Registrar says the population is decreasing on account of the large number of cottage houses taken down for improvement of extension of markets, &c., &c.

^h 455 : 6.—An arrangement appears to exist between the vestry of Liverpool and the guardians of West Derby, by which West Derby fever cases are sent to Liverpool Workhouse, and Liverpool small-pox cases are sent to West Derby.

ⁱ 456 : 2.—Of the 32 deaths from small-pox (31 of which occurred in Public Institutions), 6 were of vaccinated persons, 16 had not been vaccinated, and respecting the vaccination of 10, nothing was stated. See previous note, 455 : 6.

^a 492 : 2.—Of the 10 deaths from scarlet fever, 4 were registered in July, 4 in August, and 2 in September.

^b 494 : 6.—The 6 deaths from diphtheria occurred in the township of Shipley. The Sanitary Authority is taking measures for the appointment of a Medical Officer of Health and a Nuisance Inspector.

^c 498 : 5 and 11.—The township of Bolton (population 1271 in 1871) has been severed from the sub-district of Idle, and added to the sub-district of Bradford East End from the 1st July 1877.

^d 491 : 13.—Of the 5 deaths from scarlet fever, 4 occurred at Littlemoor.

^e 498 : 1.—The whole of the deaths from cholera were of infants, and were certified as choleraic diarrhoea.

a 587 : 4.—Of the 9 deaths from scarlet fever, 8 occurred at Skewen, near Neath.

b 588 : 1.—Typhoid fever has been very prevalent in Swansea Higher during September. The Sanitary Authorities are doing all in their power to prevent the spread of the disease.

c 590 : 2.—With one exception, the fatal cases of fever were described as typhoid or enteric.

d 593 : 4.—The fatal cases of fever were described as typhoid, and occurred in different localities.

e 595 : 3.—No death from scarlet fever was registered during the first half of October.

a 622 : 2.—The death of a person was registered whose age was stated to be 100 years.
b 623 : 3.—The 2 deaths from scarlet fever occurred in the parish of Meyllteyrn.
c 624 : 2.—The 14 deaths from scarlet fever occurred in the neighbourhood of Ebenezer Village. The 5 deaths from fever occurred in different localities.
d 624 : 4.—The fatal case of cholera was described as English.
e 625 : 3.—The 15 deaths from scarlet fever occurred within the jurisdiction of Bethesda Local Board, 8 were registered in July, 3 in August, and 4 in September; the disease is now declining.
f 627.—See page 13, note b.
g 627 : 1.—The 4 deaths from scarlet fever occurred at a farmhouse in Penrhoslligwy, in July.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING SEPTEMBER 30TH, 1877.

By JAMES GLAISHER, ESQ., F.R.S., &c.

The weather during the quarter has been for the most part cold and ungenial, particularly towards the end of September; the only period of genial weather in the three months was that in August from the 13th to the 21st, the wind during this period was chiefly from the S.W., and the two days, viz., the 19th and 20th of August were warm, being 8° and 10° above their average temperatures, and the mean excess of daily temperature for these nine days was $4\frac{1}{4}^{\circ}$. The 43 days ending August 12th were, with very few exceptions, chilly and unpleasant, the average daily deficiency of temperature for these 43 days was $1\frac{1}{4}^{\circ}$. From August 22nd to the end of the quarter the weather was almost continuously cold, and at times painfully so, particularly from the 15th to the 25th of September, when the wind was almost constantly blowing from the north, the average deficiency of daily temperature for the 40 days ending September 30th, was $3^{\circ}\cdot 1$, and the mean temperature of the month of September proved to be lower than in any September for 74 years, that is back to the year 1803. The six most remarkable days of cold were those from the 20th to the 25th of September both inclusive. The following table shows the highest and lowest temperatures observed on these days, and the amount of departures below their averages will be seen by considering that the average maximum temperature in September is about $67\frac{3}{4}^{\circ}$, and the average minimum temperature in September is about $49\frac{1}{4}^{\circ}$.

TABLE of MAXIMUM and MINIMUM TEMPERATURES of the AIR at the several STATIONS on September 20th, 21st, 22nd, 23rd, 24th, and 25th.

It will be seen that the maximum temperatures on these days were generally some degrees below 60° , and that the minimum temperatures, which should be nearly 50° , were very generally below 40° , and on the 25th day at some places below 32° .

The readings of the barometer in the neighbourhood of London were alternately above and below their averages from the 1st to the 11th of July; below their respective averages from the

12th to the 19th; above on the 20th and 21st; below on the three following days; and then above to the end of the month, with the exception of the 26th, which was 0.02 in. below. The mean reading for the month was 29.747 ins. being 0.058 in. below the average of the preceding 36 years. In August the barometer readings were above their average values from the 2nd to the 6th (that of the 1st being 0.04 inch below), they were below on the four following days, above on the 11th and 12th, below from the 13th to the 22nd, with the exception of two days, viz., 17th and 18th, which were 0.01 in., and 0.05 in. above their averages; the readings were above their averages on the 23rd and 24th, and below from the 25th to the end of the month. The mean reading for the month was 29.701 ins., being 0.093 in. below the average. The following are the only instances back to 1841 when the barometer reading for the month of August was lower than that of the present year, viz., in 1844 it was 29.677 ins.; in 1852 it was 29.649 ins.; in 1866 it was 29.637 ins. From the 1st to the 5th of September the readings of the barometer were alternately above and below their averages; they were below, from the 6th to the 15th, above on the 16th, 17th, 18th, and 19th, below on the four following days, and above from the 24th to the end of the month. The mean reading for the month was 29.903 ins., being 0.101 in. above the average.

At Greenwich the mean temperature of July was below that of June by 0.5; that of August was above that of July by 0.9; and that of September was below that of August by 8.8. (From the preceding 36 years' observations the mean temperature of July is higher than that of June by 3.3; that of August is lower than that of July by 0.7; and that of September is lower than that of August by 4.2.)

The mean temperature of the air for July below that of June over the whole country was 0.2; that of August above that of July was 0.7; and that of September below that of August was 6.6.

The mean temperature of the air for July was 60.8, being 0.8 and 1.4 below the averages of the preceding 106 years, and 36 years respectively. It was 5.1 lower than the value recorded in 1876.

The mean temperature of the air for August was 61.7, being 0.8 and 0.2 above the averages of the preceding 106 years, and 36 years respectively.

The mean temperature of the air for September was 52.9, being 3.7; and 4.4 below the averages of the preceding 106 years, and 36 years respectively. In the preceding 106 years, there are only 4 instances of so low a mean temperature in September, viz.:—In 1771, it was 52.0; in 1786, it was 51.3; in 1793, it was 52.8; and in 1803, it was 52.4.

The mean temperature of the air for the quarter was 58.5, being 1.2 and 1.9 below the averages of the preceding 106 years and 36 years respectively.

The mean high day temperatures of the air were 1.6, 0.2, and 4.5 below their averages in July, August, and September respectively.

The mean low night temperatures of the air were 1.1 and 4.0 below their respective averages in July and September; but 0.9 above in August. Therefore the days and nights were cold in July and September, and also at the beginning and end of August, but warm in the middle.

The mean daily ranges of temperature were respectively 0.6, 1.0, and 0.5 below their averages in July, August, and September.

At Greenwich the atmospheric pressure in July was less than in June by 0.096 in., in August less than in July by 0.046 in., and in September greater than in August by 0.202 in. (From the preceding 36 years' observations the mean pressure in July is less than in June by 0.005 in., in August less than in July by 0.011 in., and in September greater than in August by 0.008 in.) The mean decrease of pressure from June to July south of latitude 51° was 0.037 in., between 51° and 52° was 0.086 in., between 52° and 53° was 0.118 in., between 53° and 54° was 0.129 in.; and north of 54° was 0.133 in. The mean decrease from July to August south of latitude 51° was 0.083 in., between 51° and 52° was 0.051 in., between 52° and 53° was 0.039 in., between 53° and 54° was 0.030 in., and north of 54° was 0.022 in. The mean increase from August to September south of latitude 51° was 0.173 in., between 51° and 52° was 0.185 in., between 52° and 53° was 0.199 in., between 53° and 54° was 0.243 in.; and north of 54° was 0.264 in.

The fall of rain in July was 2.4 ins., being 0.2 in. below the average; in August it was 2.9 ins., being 0.5 in. above the average; and in September it was 1.1 in., being 1.3 in. below the average. Since 1815 there have been only nine instances of so small a fall of rain in September, as that in the present year, viz.:—In the year 1818 it was 0.9 in., in 1823 it was 1.0 in., in 1832 it was 0.4 in., in 1834 it was 0.9 in., in 1843 it was 0.5 in., in 1851 it was 0.4 in., in 1854 it was 0.7 in., in 1858 it was 0.9 in., and in 1865 it was 0.2 in. The fall of rain in the quarter was 6.4 in., being 1.0 in. below the average of the preceding 62 years.

Thunderstorms occurred on 8 days in July, 9 in August, and 6 in September.

Thunder was heard but lightning was not seen on 6 days in July, 11 in August, and 4 in September.

Lightning was seen but thunder was not heard on 4 days in July, 8 in August, and 4 in September.

Solar halos were seen on 7 days in July, 6 in August, and 5 in September.

Lunar halos were seen on 2 nights in July, 4 in August, and 2 in September.

Hail fell on 7 days in July, 3 in August, and 3 in September.

Fog prevailed on 5 days in July, 7 in August, and 11 in September.

NOTE.—In reading this table it will be borne in mind that the minus sign (—) signifies *below* the average, and that the plus sign (+) signifies *above* the average.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter were as follows:—

Direction of Wind.	JULY.			AUGUST.			SEPTEMBER.		
	Average.	1877.	Departure from Average.	Average.	1877.	Departure from Average.	Average.	1877.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	2½	3	+½	2	4	+2	1½	4	+2½
N.	3½	0	-3½	3	3	0	3½	10	+6½
N.E.	3½	0	-3½	3	0	-3	5½	3	-2½
E.	1½	0	-1½	1	0	-1	1½	2	+½
S.E.	½	0	-½	1½	2	+½	1½	2	+½
S.	2½	4	+1½	3	4	+1	2	1	-1
S.W.	10½	12	+1½	10½	11	+½	7½	5	-2½
W.	4	11	+7	3½	7	+3½	2½	2	-½
Calm (nearly.)	2½	1	-1½	3½	0	-3½	4½	1	-3½

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of July are opposite to the W., in August to the N.W. and W., and in September to the N. and N.W.

The minus sign (—) denotes defects below averages; the largest numbers affected with this sign in the month of July are opposite to the N. and N.E., in August to the N.E. and E., and in September to the N.E. and S.W.

Oats in flower, on the 7th of July at Llandudno. *Wheat in ear*, on the 1st of July at Oxford, *Barley in ear*, on the 3rd of July at Strathfield Turgiss. *Oats in ear*, on the 1st of July at Strathfield Turgiss. *Rye in ear*, on the 1st of July at Oxford.

Oats cut, on the 25th of July at Oxford, on the 20th of August at Llandudno, and on the 25th at Kelstern Grange.

Wheat cut, on the 1st of August at Guernsey, on the 7th at Oxford, on the 8th at Cardington, on the 13th at Torquay, on the 17th at Llandudno, and on the 21st at Kelstern Grange.

Barley cut, on the 18th of August at Cardington, on the 20th at Oxford, on the 24th at Llandudno, and on the 30th at Torquay.

Horsechestnut divested of leaves, on the 27th of September at Helston. *Hawthorne divested of leaves*, on the 20th of September at Helston.

Woodcock arrived, on the 26th of September at Helston. *Swallow departed*, on the 20th of September from Stonyhurst.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING SEPTEMBER 30TH, 1877.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the sixth edition of his Hygrometrical Tables.

BRADFORD,	16th July, 3h. p.m.,	29·940 in.,	has been altered to 28·940 in.
WISBECH,	26th Aug., 8h. a.m.,	29·005 in.,	29·505 in.
BRADFORD,	18th Sept., 3h. p.m.,	29·460 in.,	29·960 in.
BYWELL,	24th Sept., 3h. p.m.,	29·056 in.,	30·056 in.

WISBECH.—The mean reading of the *wet bulb* thermometer for the month of July at 3h. p.m., when corrected for diurnal range is higher than that of the dry bulb, and therefore cannot be used in deducing hygrometrical results.

Second Rain-gauges are placed--

At Strathfield Turgiss, at the height of 38 feet above the ground, the amount collected was 2.06 inches.

ond Rain-gauges are placed—		July	August,	September,	Total during the Quarter.
At Strathfield Turgiss, at the height of 33 feet above the ground, the amount collected was 2·06 inches.			1·45 inches.	0·87 inches.	4·38 inches.

The highest temperatures of the air were at Camden Square, 87°·1; Salisbury and Chiswick, both 87°·0; and Blackheath, 86°·8.
The lowest temperatures of the air were at Chiswick, 28°·0; Streatley, 30°·9; Cambridge, 31°·0; and Strathfield Turgiss, 31°·2.
The greatest daily ranges of the temperatures of the air were at Salisbury, 22°·3; Gloucester, 20°·8; and Royston, 20°·5.
The least daily ranges of the temperatures of the air were at Guernsey, 9°·4; Liverpool, 9°·9; and Bywell, 11°·1.
The greatest number of rainy days were at Allenheads, 69; Bywell, 64; Stonyhurst, 62; and Eccles, 61.
The least number of rainy days were at Osborne and Brighton, both 30; Strathfield Turgiss, 31; Chiswick, 32; Torquay and Ventnor, both 33.
The heaviest falls of rain were at Allenheads, 18·04 inches; Stonyhurst, 16·10 inches; and Llandudno, 15·35 inches.
The least falls of rain were at Ramsgate, 5·25 inches; Strathfield Turgiss, 5·68 inches; and Ventnor, 6·19 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.		Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Read- ings of the Thermometer.	Mean of all Lowest Read- ings of the Thermometer.	Mean Range of Temper- ature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Max- imum in Rays of Sun.	Mean Reading of Min- imum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	Mean Number of Days it fell.	RAIN. Mean Amount col-

QUARTERLY RETURN
OF
MARRIAGES, BIRTHS, AND DEATHS
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF
ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 116.] **Marriages**—*July, August, September, 1877.*
Births and Deaths—*October, November, December, 1877.* [Price 9d.]

*General Register Office, Somerset House,
1st February, 1878.*

In the UNITED KINGDOM the *births* of 284,140 children, and the *deaths* of 164,194 persons of both sexes, were registered in the three months ending 31st December 1877. The recorded natural increase of population was thus 119,946.

The registered number of persons married in the quarter ending 30th September 1877 was 117,378.

The resident population of the United Kingdom in the middle of 1877 is estimated at 33,444,419; that of England and Wales at 24,547,309, of Scotland at 3,560,715, and of Ireland at 5,336,395. The birth-rate in the United Kingdom in the fourth quarter of 1877 was 33·7 per 1000, and the death-rate 19·5. The marriage-rate in the third quarter of 1877 was 13·9 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2185 registration sub-districts of England and Wales during the quarter ending 31st December 1877; and the MARRIAGES in 13,791 churches or chapels, in 7990 registered places of worship unconnected with the Established Church, and in 631 Superintendent Registrars' Offices, in the three months ending 30th September 1877.

The returns of the closing quarter of 1877 present many satisfactory features. The births are above, the deaths much below, the average; so that the population has increased at an unusual rate. The increase of births may be partly due to improved registration, the decrease of deaths to the milder weather of the usually inclement months of November and December. But there is an evident increase of children and a diminution of loss of population by emigration. Then the improvement of health has been most evident in the town districts where sanitary measures were most required, and have been most actively carried out. The towns are getting more ample supplies of purer water; and are removing their refuse from the midst of their inhabitants to a distance, if not to the earth from which it was taken and should be returned. The results are encouraging. The steady decline of fever bears the same clear testimony to the effect of purity of air and water; several thousands of lives were saved in the year which might otherwise have perished. The deaths from fever in 1877 were 8429 fewer than those in 1870. Small-pox is quiescent everywhere but in London and a few other places. Scarlet fever is the prevailing epidemic. The price of wheat was above the average, but it was cheaper

in the autumn than in the spring and summer quarters. Potatoes have been dear. Beef and mutton, also, are not so dear as they were. The price of coal is descending to its former level. The season was mild; the temperature was above the average in November and December. The rain-fall was slightly below the average quantity. The west, south-west, and south winds prevailed to an unusual extent, and blew with unusual velocity.

The marriages as usual in the Established Church are returned by the clergy and not by the registrars. They are not received in time for this return. In the summer quarter they were below the usual numbers; thus strictly following, as they always do, the state of trade in leading industries. Prudent couples wait till they see the prospect of returning prosperity.

Marriages.

During the three months ending September last 95,464 persons were married in England and Wales, showing a decrease of 2806 from the number in the corresponding quarter of 1876. The annual marriage-rate, which in the third or summer quarters of the five years 1872-6 had steadily declined from 17·1 to 16·1 per 1000, further decreased in the corresponding period of 1877 to 15·4; this was a lower marriage-rate than had prevailed in the summer quarter of any year since those of 1847-8-9. The marriage-rate in the summer of 1877 was 0·9 per 1000 below the average rate in the corresponding period of the ten preceding years. In the summer quarters of the 39 years 1838-76 the annual marriage-rate averaged 15·9 per 1000, the lowest being 13·4 in 1842, and the highest 17·3 in 1865. It is satisfactory to note that the depression of the English marriage-rate, below the average rate in the corresponding period of the 39 years before mentioned, decreased steadily during the first three quarters of 1877; the depression was equal to 5·1 per cent. in the first, and 4·8 per cent. in the second quarters, while it further declined to 3·1 per cent. in the third quarter now under notice.

The marriage-rate in the three months ending September last did not exceed 10·8 per 1000 among the principally agricultural population of the Eastern division, whereas it ranged upwards in the other registration divisions to 15·4 in Yorkshire, 18·3 in the North-western, and 20·6 in the Metropolis. The lowest county rates were 9·2 and 9·9 in Westmorland and Cambridge; the highest 17·5 in Nottingham, and 18·9 in Lancashire. Compared with the average number in the three preceding corresponding quarters, without correction for increase of population, which, however, but slightly affects the value of the comparison, the marriages recorded in the third quarter of 1877 showed a decline of one-thirtieth. In London and in the South-eastern division the marriages slightly exceeded this average, whereas the largest decline occurred among the populations, principally engaged in the coal and iron industries, of the Northern counties and South Wales. The marriages in Leicestershire showed an exceptional increase upon the average equal to 9·1 per cent.; while the decrease was equal to 9·8 per cent. in the West Riding of Yorkshire, 10·3 in South Wales, 14·9 in Norfolk, 15·3 in Northumberland, 16·9 in Durham, and 19·7 in Monmouthshire.

Births.

In the fourth or autumn quarter of 1877, ending 31st December last, 220,609 births were registered, equal to an annual rate of 35·7 per 1000, which exceeded by 1·1 the average rate in the corresponding periods of the ten years 1867-76. The birth-rate in the fourth quarters of the 39 years 1838-76 averaged only 32·6 per 1000, and ranged from 29·3 and 29·4 in 1838 and 1847, to 35·5 and 35·7 in 1872 and 1874. The birth-rate in the last three months of 1877 was, therefore, equal to the highest birth-rate on record in the fourth quarter of any year. The sex proportion of the children, whose births were registered in the quarter under notice, was 104·4 boys to 100 girls, against 103·3 in the corresponding period of 1876.

The annual birth-rate in the last three months of 1877, which averaged 35·7 in England and Wales, ranged from 29·4 in the agricultural counties of the South-western registration division, to 39·7 in the mainly manufacturing population of the North-western division. The lowest county rates were 26·9 in Westmorland, 27·2 in Cornwall, and 27·3 in Huntingdon; while the rate ranged upwards to 41·0 in Staffordshire, 41·1 in Nottingham, and 41·2 in Durham. The births registered last quarter in most of the registration divisions and counties differed but slightly from the average numbers returned in the three preceding corresponding quarters; a slight decline was, however, shown in Huntingdonshire, Cornwall, and Durham, whereas a considerable increase prevailed in Leicestershire and the North Riding of Yorkshire.

In twenty of the largest English towns the birth-rate averaged 37·2 per 1000, against 37·1 and 37·7 in the corresponding periods of 1875 and 1876; this rate was 1·5 above the average rate in the whole of England and Wales. The lowest rates in these towns were 29·9 in Brighton, 30·0 in Plymouth, and 30·4 in Portsmouth; in the other towns the rates ranged upwards to 42·3 in Salford, 42·7 in Hull, and 43·0 in Sunderland. In fifty other large town districts the birth-rate averaged 37·3, and was almost identical with that in the twenty larger towns, while it showed a marked increase upon the rates that prevailed in the same town districts in the corresponding periods of 1875 and 1876, when they were 35·9 and 36·4. Whereas the birth-rate last quarter was but 24·1 and 25·6 in Cheltenham and Bath, it was equal to 48·5 in St. Helens, 49·0 in Barrow-in-Furness, and 50·6 in Wigan. These high birth-rates suggest the possibility that the present population of the three last-mentioned towns is under-estimated. Seven years having nearly elapsed since the last census enumeration, the usual method of assuming that the observed rate of increase prevailing between the last two censuses has since been maintained is not always trustworthy; estimates of urban population formed on this basis require corroboration by comparison with local returns showing the recent rate of increase of inhabited houses.

Movement of Population.

The *natural* increase to the population of England and Wales during the quarter ending September last, by excess of births over deaths registered, was 96,115, against 78,046 and 93,533 in the corresponding periods of 1875 and 1876. The *actual* increase to the population, largely affected as it is by the balance between immigration and emigration, is unknown, as no complete record of immigration exists. Board of Trade returns show that during the three months ending December only 23,649 emigrants embarked from the various ports of the United Kingdom at which emigration officers are stationed, a number exceeding by 390 that returned in the December quarter of 1876; with this exception, however, it was lower than in any corresponding quarter since 1861, when the number was only 16,559. Excluding foreigners, and distributing proportionally 882 whose nationality was undistinguished, the emigrants of British origin were 20,329, including 13,970 English, 1786 Scotch, and 4573 Irish. The proportions of emigrants to a million of the population were 569 from England, 502 from Scotland, and 857 from Ireland. Compared with the average proportions of emigrants during the fourth or autumn quarters of the seven preceding years 1870-6, emigration showed last quarter a decline of 31 per cent. in England, 41 in Scotland, and 39 in Ireland. Of the 20,329 British emigrants, 42 per cent. left for the Australian Colonies, 39 for the United States, 6 for British North America, and 13 per cent. for all other places. Recent returns have shown a marked decline in the proportion of emigrants for the United States, whereas the proportion embarking for the Australian Colonies has considerably increased.

Prices, Pauperism, and Meteorology.

The average price of wheat during the quarter was 52s. 4d., and showed a decline of 9s. 8d. from that which prevailed in the preceding three months, while it exceeded the average prices during the last quarters of 1875 and 1876. During the seven quarters ending September last the average price of wheat steadily in-

creased from 43s. 8d. to 62s. 0d. The mean wholesale prices of beef and of mutton averaged $5\frac{7}{8}d.$ and $6\frac{1}{4}d.$ per lb.; the mean price per lb. of beef was $\frac{5}{8}d.$, and of mutton 1d., below the prices that prevailed in the preceding three months. The mean price of the best potatoes was exceptionally high, and equal to 163s. per ton. The price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, averaged 18s. 3d. per ton, against 30s. 8d., 24s. 7d., 22s. 6d., and 19s. 0d. in the four preceding corresponding quarters. The price of coal has steadily declined since the latter part of 1873. The average price of consols was $96\frac{2}{8}l.$, and higher than in any quarter since the last of 1858, when it averaged $98\frac{2}{8}l.$ The minimum annual rate of discount charged by the Bank of England, which had been raised from 2l. to 3l. on 28th August, was further raised to 4l. and to 5l. on 4th and 11th of October, respectively; on 29th November the minimum rate was again lowered to 4l., and so remained throughout the remainder of the quarter.

The remarks upon the meteorology of the quarter at the Royal Greenwich Observatory, and at other stations of observation, furnished by Mr. James Glaisher, F.R.S., will be found on pages 65–72, with accompanying tables. The weather during October was generally fine and dry, and the temperature below the average; November was for the most part cloudy and wet, and the temperature variable; damp foggy weather prevailed during the greater part of December, which was unusually dark and sunless. The mean readings of the barometer showed an excess during October and December, whereas they were considerably below the average in November. The mean temperature of the quarter at Greenwich was $45^{\circ}0$, and exceeded the average for the corresponding period in 106 years by $1^{\circ}5$. The mean showed a slight deficiency in October, whereas in November and December it exceeded the average by $3^{\circ}2$ and $1^{\circ}7$ respectively. November was unusually warm, the mean temperature exceeding that of any previous corresponding month since 1863; indeed, during the past 106 years there appear to have been but 13 instances of a mean temperature for November so high as that of November 1877. The mean temperature of the quarter at 45 places of observation ranged from $42^{\circ}2$ at Kelstern Grange to $50^{\circ}1$ at Helston.

The measured rain-fall of the quarter at Greenwich was 6.9 inches, and was two-tenths of an inch below the average amount in the corresponding period of the previous 62 years; the rain-fall of the year was thus raised to 26.9 inches, and exceeded the yearly average by about $1\frac{1}{2}$ inches. In October 1.7 inches and in November 3.4 inches were measured, showing a deficiency of 1.1 inches in October and one equal excess in November; the rain-fall in December was 1.8 inches, and differed but slightly from the average. In only 11 instances since 1818 has the November rain-fall equalled that measured in 1877. The smallest measured rain-fall during last quarter, at the various stations of observation, was 5.51 inches and 5.64 inches at Leicester and Cambridge; and the largest amounts were 19.60 inches and 21.02 inches at Stonyhurst and Cockermouth. The number of days on which rain was measured ranged from 42 at Chiswick, to 72 at Carlisle and 74 at Stonyhurst.

State of the Public Health; Deaths.

During the last three months of 1877, 124,494 deaths were registered in England and Wales, equivalent to an annual rate of 20.1 per 1000 of the estimated population in the middle of the year. This death-rate, although a shade higher than the exceptionally low rate in the last quarter of 1876, was 1.8 per 1000 below the average in the corresponding quarters of the ten years 1867–76. The average annual death-rate in the fourth or autumn quarters of the 39 years 1838–76 was 21.8; the rate last quarter was 1.7 per 1000 below this average, and was lower than that which prevailed in any of those 39 autumn quarters, except in 1845, 1856, and 1876. In the fourth or autumn quarter of 1845 the death-rate did not exceed 19.1 per 1000; while the highest autumn death-rate on record is 25.5 in 1846. The death-rate in the last quarter of the year is mainly governed by the temperature. For instance, in the last three months of 1845 the lowest daily reading of the thermometer at the Royal Greenwich Observatory fell below the freezing point of water on ten days, showing 16.6 aggregate degrees of frost; while in the corresponding period of 1846 the number of frosty days was 23, on which the lowest

readings showed an aggregate of $144^{\circ}5$ of frost. In the last quarters of 1872, 1876, and 1877 the frosty days were but 4, 8, and 15 respectively, and the aggregate degrees of frost $12^{\circ}5$, $23^{\circ}8$, and $27^{\circ}8$ respectively; the English death-rate in those quarters, however, showed but slight variation, being equal to 20.2, 20.0, and 20.1 per 1000. The amount of frost in the last three months of 1877, although small, showed an excess upon that in the corresponding period of 1876, and the mean temperature of the quarter was $2^{\circ}0$ lower; the death-rate, however, scarcely showed an excess. The low death-rate in the quarter now under notice appears, therefore, to have been partly due to other causes than the favourably mild weather.

The 124,494 deaths included 64,293 of males and 60,201 of females; the male death-rate was equal to 21.3 and the female rate to 19.0 per 1000 estimated to be living of each sex. In equal numbers living the deaths of males were as 113 to each hundred deaths of females; in the corresponding periods of 1875 and 1876 the proportion of the male to the female death-rate was as 112 to 100.

In the eleven registration divisions the death-rate during last quarter was but 15.5 in the South-eastern counties, while it ranged upwards to 22.4 in the Metropolitan division, and 24.5 in the North-western counties. In Westmorland and in the extra-metropolitan portion of Surrey the annual death-rate during the quarter did not exceed 13.3 and 14.6 per 1000, whereas in the other counties the rates ranged upwards to 22.7 in Staffordshire and 25.4 in Lancashire. In equal numbers living no less than 191 persons died last quarter in Lancashire to each 100 in Westmorland, although all other conditions being equal, the age distribution of the population of Lancashire should give a lower death-rate than the age distribution of the Westmorland population. The death-rate in Lancashire again showed a large excess during the year 1877, and was equal to 24.8 per 1000, whereas in the Metropolis it did not exceed 21.8; thus in equal numbers living, 114 persons died during 1877 in Lancashire to each 100 in London, although the population of the Metropolis is entirely urban, while Lancashire includes a considerable rural area.

In the principal urban population of England and Wales, the death-rate in the quarter was equal to 22.2 per 1000, whereas in the remaining or rural population it did not exceed 17.2; the urban rate was 2.2, and the rural rate 1.4, below their respective averages for the corresponding periods of the last ten years. In equal numbers living, the deaths in the urban were as 129 to 100 in the rural districts; the average proportion in the ten preceding December quarters being 131 to 100. The comparative excess in urban death-rates appears to be decreasing, a result mainly owing to the marked decline of mortality in our largest towns.

In twenty of the largest English towns, including London, having a population of rather more than seven millions of persons, the death-rate last quarter averaged 22.8 per 1000, and exceeded the general urban rate by only 0.6. The rates in the twenty towns ranged from 16.9 and 18.1 in Portsmouth and Leicester, to 26.6 and 27.0 in Wolverhampton and Manchester. The exceptionally high rate in Wolverhampton was due to a severe epidemic of scarlet fever. In fifty other English and Welsh town districts, having a population of rather more than two millions and three quarters, the death-rate averaged 21.9 per 1000, and was 0.9 below the rate in the twenty larger towns. The lowest rates in these fifty town districts were 13.0 in Dover, 14.5 in Maidstone, and 15.0 in Rochester and Chatham; the highest rates were 27.2 in Stoke-upon-Trent, 27.3 in Wigan, 27.6 in Northampton, 28.6 in Ashton-under-Lyne, and 34.7 in Preston. In each of these four last-mentioned towns, except Ashton-under-Lyne, the zymotic death-rate during the quarter showed a marked excess. The remaining urban population of England and Wales, residing principally in small towns, numbers about four millions and a half of persons, among whom the death-rate last quarter was equal to 21.5 per 1000, and no less than 4.3 in excess of the average rate that prevailed in the English rural population.

MORTALITY AT DIFFERENT AGES.—The 124,494 deaths at all ages included 29,945 of infants under one year of age, 63,506 of persons aged between one and sixty years, and 31,043 of persons aged upwards of sixty years. The deaths of infants under one year of age were equal to 136 per 1000 of the births registered, showing a decline of 11 per 1000 from the average proportion that prevailed in the seven preceding corresponding quarters. The rate of infant mortality during

last quarter was lower than in the fourth quarter of any of the seven years 1870-76; the highest rate in these seven December quarters was 157 in 1871, and the lowest 137 in 1872, when the temperature of the last three months of the year was exceptionally high. It may be noted that infant mortality last quarter was lower than in the last three months of 1876, although the death-rate at all ages showed a slight increase. In the South-eastern and South-western registration divisions, having a population mainly rural, the deaths of infants under one year of age last quarter did not exceed the proportions of 96 and 104 per 1000 births registered; while in Yorkshire it was equal to 149, and in the North-western division to 166 per 1000. Infant mortality, measured in this way, was but 65 per 1000 births registered in Herefordshire, 78 in Wiltshire, and 84 in Dorsetshire; the proportions of infant mortality were, however, equal to 154 in Nottinghamshire, 154 in Staffordshire, 157 in the West Riding of Yorkshire, 158 in Durham, and 169 in Lancashire. In the twenty large English towns the rate of infant mortality averaged 154 per 1000 of the births registered, against 176, 170, and 151 in the last quarters of the three preceding years. The rates in the several towns showed the usual wide divergence: they ranged from 121 and 134 in Portsmouth and Leicester, to 188 in Bradford, 188 in Leeds, and 193 in Oldham. The rate in Leicester, which had been 304 in the preceding three months, declined last quarter to 134, while in the last quarter of 1876 it was equal to 162 per 1000; the rate also showed a decline in Salford and Sunderland. On the other hand the returns, compared with those for the fourth quarter of 1876, exhibit a marked increase of infant mortality in Plymouth, Birmingham, and Manchester. The usual startling evidence of the waste of infant life in many of the large Lancashire towns is furnished by the returns for last quarter. In Preston, Blackburn, Wigan, and Ashton-under-Lyne, the proportion of deaths under one year to births during the three months averaged 211 per 1000, and in Preston was equal to 256. In other Lancashire manufacturing towns, however, infant mortality did not show a similar excess; for instance, the rate was not higher than 138 in Rochdale and 141 in Bury. The Coroners and Medical Officers of Health for Preston, Wigan, Blackburn, and Ashton-under-Lyne should be in a position to throw some light upon the causes which operate so fatally upon infant life in those four towns.

The annual rate of mortality during the quarter among children and adults aged between one and sixty years was equal to 11.5 per 1000 estimated to be living, and it was 1.2 per 1000 below the average rate in the seven preceding corresponding quarters. The death-rate at these ages was almost identically the same in the three mild autumn quarters of 1872, 1876, and 1877, when it was equal to 11.4, 11.3, and 11.5 per 1000, respectively. In twenty of the largest towns the rates at these ages averaged 14.0, against 15.4 and 13.5 in the corresponding periods of 1875 and 1876; it did not exceed 10.0, 10.5, and 10.6 in Portsmouth, Norwich, and Leicester, while it ranged upwards to 17.1 and 17.7 in Liverpool and Manchester.

Among persons aged upwards of 60 years the annual rate during the three months ending December last was equal to 67.1 per 1000 persons living at these ages; the average death-rate at these ages during the seven preceding corresponding quarters was 72.4 per 1000. While the death-rate among elderly persons in the mild autumn quarter of 1876 did not exceed 65.4 per 1000, it was equal to 81.1 in the same period of 1874, when severe frost prevailed during December. The rate among persons aged upwards of 60 years living in the twenty large towns averaged 73.3 per 1000 last quarter, against 74.9 in the same period of 1876; it ranged upwards from 51.5 and 58.8 in Leicester and Brighton, to 95.7 and 100.0 in Sunderland and Wolverhampton.

The rate of mortality at all ages last quarter, as has been noted, slightly exceeded that which prevailed in the corresponding period of 1876; infant mortality showed, however, a decline of 2.2 per cent., while the increased mortality was equal to 1.8 per cent. among persons aged between one and 60 years, and to 2.6 per cent. among those aged upwards of sixty years.

ZYMOTIC MORTALITY. The 124,494 deaths from all causes in England and Wales, during last quarter, included 5018 which were referred to scarlet fever, 2936 to diarrhoea, 2688 to whooping-cough, 2594 to fever, 2557 to measles, 743 to diphtheria, and 405 to small-pox; in all, 16,941 deaths resulted from these

seven zymotic diseases, equal to an annual rate of 2·74 per 1000, which was identical with that prevailing in the corresponding period of last year, but was 0·85, or more than a quarter, below the average zymotic rate in the fourth quarters of the seven years 1870-6. As is usual in the last three months of the year the fatality of scarlet fever showed an increase, but that of each of the seven diseases, except measles, was below the average for the season. The zymotic death-rate last quarter was equal to but 0·8 and 1·2 per 1000 in the mainly rural population of Huntingdonshire and Buckinghamshire, whereas in the other counties it ranged upwards to 4·0 in Lancaster, and 4·1 in Stafford. The zymotic fatality in Lancashire was general, and scarlet fever prevailed with exceptional fatality in Staffordshire. In the twenty large English towns the rate from these seven diseases averaged 3·5 per 1000, and slightly exceeded that in the corresponding period of last year; in Hull the rate was so low as 1·6, and it did not exceed 1·7 in Leicester and Nottingham, while it ranged upwards to 4·7 in Liverpool and Birmingham, and 5·7 in Wolverhampton. Whooping-cough was the most fatal zymotic disease in Birmingham and Liverpool, and the high zymotic rate in Wolverhampton was due to the exceptional mortality from scarlet fever. In fifty other large town districts the zymotic rate last quarter averaged 3·3 per 1000, and was but slightly below that in the twenty largest towns; in Barrow-in-Furness and in Hastings the rate from the seven zymotic diseases was so low as 0·6 per 1000, whereas it was equal to 5·6 in Blackburn, 5·7 in Exeter, 6·2 in Northampton, 6·2 in Stoke-upon-Trent, and 7·6 in Preston. Scarlet fever was the prevailing epidemic in Exeter and Stoke-upon-Trent, while the high zymotic rate in the three other towns was rather due to the general prevalence of diseases of this class. While the average zymotic death-rate last quarter was equal to 3·5 per 1000 among the nearly ten millions of persons estimated to be living in seventy of the largest towns, it did not exceed 2·3 in the remaining population of England and Wales.

The deaths from *scarlet fever*, which during the two preceding quarters had been 2764 and 2830, rose to 5018 in the last three months of the year; they were, however, fewer than in any December quarter since that of 1872. The annual death-rate from this disease was equal to 0·81 per 1000 of the estimated population living in England and Wales, whereas in the seven preceding corresponding quarters it had averaged 1·12, ranging from 2·08 in the last quarter of 1870 to 0·64 in 1872. The fatal cases of scarlet fever showed a marked increase, upon the numbers returned in the preceding quarter, in each of the eleven registration divisions, except the South-western, where they had declined; the largest proportional increase occurred in London, the Eastern Counties, Lancashire, Yorkshire, and Durham. The death-rate from scarlet fever did not exceed 0·26 per 1000 in the counties of the South-eastern division, and was so low as 0·10 in Hampshire; the rates, however, ranged upwards in the other counties to 1·13 in Devonshire, 1·48 in Durham, and 2·35 in Staffordshire. In the twenty large towns the death-rate from scarlet fever averaged 0·87, and slightly exceeded that in the whole of England and Wales; the greatest proportional fatality occurred in Wolverhampton, Sheffield, and Manchester. The local returns show an exceptionally fatal prevalence of scarlet fever in the following places:—Banbury, Exmouth, Exeter, Torquay, Bradninch (rural sanitary district of Tiverton), Bideford, St. Austell and Mevagissey, Broseley, Stafford, Trentham, Tunstall, Burslem, Longton, Leek, Darlaston, Evesham, Anston sub-district (Nottinghamshire), Radcliffe sub-district (Bury), Lancaster, Elland (Halifax), Mirfield (Dewsbury), Sandal sub-district (Wakefield), Darfield (Barnsley), Haverfordwest, and Llandudno.

The deaths referred to *diarrhœa* were fewer than in the corresponding quarter of any year since 1869, and were equal to an annual rate of 0·47 per 1000, whereas in the corresponding quarter of the seven years 1870-6 the rate averaged 0·60.

The 2688 fatal cases of *whooping-cough* were nearly twice as numerous as those returned in the corresponding quarter of 1876, and were equal to an annual rate 0·43 per 1000, which somewhat exceeded the average rate in the last quarters of the seven years 1870-6. The disease showed excessive fatality in Warwickshire and Lancashire, and local outbreaks prevailed in Colchester, Plymouth and Stoke Damerel, Penzance, Birmingham, Oakham, Sutton-in-Ashfield (Nottinghamshire), Liverpool, Preston, and Goole.

The deaths referred to *fever* during the last three months of 1877 were 2,594; although, as is usually the case, they exceeded the number returned in either of the two preceding quarters, they showed a further marked decline from the numbers in the fourth quarters of recent years. The annual death-rate from fever last quarter was equal to 0·42 per 1000 persons estimated to be living, against 0·70, the average rate from fever in the corresponding periods of the seven years 1870-6. In the fourth quarter of 1870 the fever-rate was equal to 0·95 per 1000, whereas in the seven more recent corresponding periods the rate has steadily declined to 0·42 in the quarter now under notice; thus to every 100 deaths from fever in the last three months of 1870, only 44 were recorded in the corresponding period of 1877. Fever (enteric and typhus) in England is, therefore, not half so fatal as it was seven years ago. In the Eastern registration division (Essex, Suffolk, and Norfolk) the fever-rate last quarter averaged only 0·29 per 1000, whereas it was equal to 0·58 in Lancashire, 0·59 in Cumberland, 0·62 in Monmouthshire, and 0·66 in South Wales. The death-rate from fever shows the greatest excess in urban aggregations of population, but it has recently showed a marked decline in our largest, while its decline in the smaller towns has not been so rapid. In the twenty large towns the fever-rate last quarter averaged 0·51 per 1000, which only slightly exceeded the general English rate; in the several towns it ranged from 0·16 in Brighton to 0·89 in Salford. The list of seventy large towns specially dealt with in these returns includes thirteen Lancashire towns having an estimated population of 1,704,670 persons, among whom the fever-rate last quarter was equal to 0·55 per 1000; in the remainder of the county, excluding the thirteen large towns, the population may be estimated at 1,412,379 persons, living in smaller towns and in rural districts, among whom the fever-rate was 0·62, and higher than in the largest towns. Sanitary progress is not yet the established fact in our smaller towns and rural districts that it has become in so many of our largest towns. Fever, principally enteric or typhoid, showed exceptional fatality, and exceeded the annual rate of one per 1000 persons living in Ilminster, Yeovil and Frome, Shrewsbury, Longton (Staffordshire), Wednesbury, Cradley (Worcestershire), Great Grimsby, Birkenhead (having a fever-rate of 1·96 per 1000), St. Helens, Haslingden, Over-Darwen, Preston, Poppleton (sub-district), Crowle (Yorkshire), Middlesbrough, Maryport, Whitehaven, Llantarnam (near Newport, Monmouthshire), Ystradyfodwg, Llanelly (Carmarthenshire), the district of Carmarthen, Haverfordwest, Llanelly (Brecon), and Corwen.

The 2,557 deaths from *measles* exceeded the number in the preceding three months by rather more than a thousand, and were equal to an annual rate of 0·41 per 1000, which was slightly above the average rate from the disease in the seven preceding corresponding quarters. In the fourth quarter of 1872 the measles-rate was only 0·23, while in the same period of 1871 it had been equal to 0·66. Measles was fatally epidemic last quarter in London, Northampton, Langport (Somerset), Bristol, Gloucester, Newark, Preston, Liversedge (Yorkshire), Cocker-mouth, Pontypridd, Margam (sub-district of Neath), Pembroke, and Flint registration sub-district.

The deaths referred to *diphtheria* in the quarter were 743, and were equal to an annual rate of 0·12 per 1000, corresponding with the rate in the corresponding period of 1876. The returns show many local outbreaks principally in rural districts, among which may be noted those at Whitminster (Gloucester), Quatt and Alveley (Bridgnorth), Harvington (Evesham), Alcester, Abergavenny, and Llansaintffraid (Aberayron district).

Small-pox, in spite of the epidemic prevalence in London and its suburban districts, was the least fatal of the seven principal zymotic diseases in England last quarter, and caused only 405 deaths, against 1943, 1416, and 516 in the three preceding quarters of the year. Of the 405 fatal cases of small-pox, 316 occurred in London and its outer ring of suburban districts, 13 in Durham, 12 in Lancashire, and 64 in other parts of England and Wales. The fatality of small-pox showed a marked decline in Lancashire and Cheshire, where but 18 fatal cases were recorded, against 467, 401, and 132, in the three preceding quarters of the year. The annual death-rate from small-pox was equal to 0·29 per 1000 persons living in Greater London, whereas in the remainder of England and Wales it was but 0·02 per 1000; the Metropolitan small-pox rate was, therefore, seventeen times as great as the rate

in the provinces. Out of London the only outbreaks of small-pox during the quarter calling for notice occurred at Harwich, and Bishop-Auckland, where 17 and 13 fatal cases were respectively registered. The small-pox epidemic in London, which had steadily declined during the first three quarters of the year, again showed increased fatality in November and December.

DEATHS IN PUBLIC INSTITUTIONS.—In workhouse establishments, hospitals, and public lunatic asylums, 11,741, or 9·4 per cent. of the deaths were registered during the quarter, a proportion which showed a marked increase upon that which had prevailed in recent corresponding quarters. In the twenty large towns 5878, or 14·6 per cent. of the deaths were registered in public institutions, against 15·5 per cent. in the corresponding period of last year; the proportion in these towns last quarter ranged from 4·7 and 7·1 per cent. in Oldham and Sunderland, to 15·3 per cent. in Manchester and Bristol, and 17·9 per cent. in London. Excluding the twenty large towns, the proportion of institution deaths in the rest of England and Wales averaged 7·0 per cent. Of the deaths in public institutions in England and Wales in 1876, 63 per cent. occurred in workhouse establishments, 27 per cent. in hospitals, and 10 per cent. in lunatic asylums.

Violent Deaths.—The deaths referred to different forms of violence during the quarter were 4173, and were fewer than in any previous corresponding period since that of 1872; they were equal to an annual rate of 0·67 per 1000 persons living, and to 3·4 per cent. of the deaths from all causes. In the agricultural counties of the Eastern registration division the death-rate from violence did not exceed 0·47 per 1000, whereas it was equal to 0·90 in Lancashire, 0·70 in the West Riding of Yorkshire, and 0·87 in Durham, where manufacturing industries mainly prevail. In the twenty large towns the death-rate from violence averaged 0·75 per 1000; and while it did not exceed 0·24 and 0·28 in Norwich and Portsmouth, it ranged upwards to 1·04 and 1·21, respectively, in Birmingham and Liverpool.

Inquests.—During the last three months of 1877 the inquest cases registered in England and Wales were 6432, and equal to 5·2 per cent. of the total deaths; this proportion scarcely differed from the average proportion in recent years. In the twenty large towns the proportion of inquest cases averaged 5·9 per cent., but ranged in the various towns from 2·6 in Oldham, and 3·3 in Sheffield and Wolverhampton, to 8·6 in Manchester, and 9·5 in Nottingham. Thus the proportion of inquest cases was nearly four times as great in Nottingham as in Oldham. Are too many inquests held in Nottingham, or too few in Oldham? In England and Wales last quarter the inquest cases exceeded the number of deaths referred to violence by 54 per cent., and in the aggregate of the twenty towns by 78 per cent.; in London by 86 per cent., and in Manchester by 235 per cent.; whereas the excess of inquest cases upon the deaths referred to violence was but 15 per cent. in Oldham, 17 per cent. in Hull, and 43 per cent. in Sheffield.

HEALTH OF FOREIGN CITIES.

A summary of the weekly returns with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the fourth quarter of the year, in thirty Indian and Foreign cities, was 28·4 per 1000, against 22·8 in twenty of the largest English towns. The population of these thirty Foreign cities is estimated at about twelve and a half millions of persons. In these cities the lowest death-rates were 16·5 and 17·7 in Philadelphia and Christiania; whereas the rates ranged upwards in the other towns to 44·9 in Bombay, 45·7 in Alexandria, and 97·3 in Madras. The mortality in Madras, though it showed a considerable decline from that in the preceding quarter, still continued high; the 9636 deaths during last quarter included 438 from small-pox, and 381 from cholera. In Calcutta 347, and in Bombay 127 deaths were referred to cholera. In St. Petersburg 544 deaths resulted from fever, equal to an annual rate of 3·26 per 1000. In Paris the deaths from typhoid fever were 327, equal to an annual rate of 0·66 per 1000, whereas in London the rate from this disease did not exceed 0·39. In Berlin and Philadelphia typhoid fever was especially fatal. Small-pox showed

more or less prevalence in Madras, St. Petersburg, Vienna, and Trieste. Scarlet fever caused 331 deaths in Berlin, against 154 and 269 in the two preceding quarters; this disease also prevailed in Stockholm, Dresden, and in the American cities. To diphtheria 347 deaths were referred in Paris, 306 in Berlin, 337 in New York, and 193 in Brooklyn, showing in each of those towns an increase upon the numbers returned during the preceding quarter.

The Year 1877.

In the United Kingdom 1,153,398 births and 667,796 deaths were registered during the year 1877, equal to a birth-rate of 34·5, and a death-rate of 20·0 per 1000 persons estimated to be living in the middle of the year. The *natural* increase of population, by excess of births over deaths, was therefore 485,602, and 7903 more than the excess in 1876. The *actual* increase is governed by the balance between immigration and emigration. No complete record of immigration exists, but returns issued by the Board of Trade show that during 1877 emigrants of British origin to the number of 91,060 left the various ports of the United Kingdom at which emigration officers are stationed. Emigration continues to decline, and the number in 1877 was 11 per cent. lower than that in 1876, which showed a decline of 22 per cent. from the number in 1875. The decline in 1877 from the numbers in 1876 was equal to 11 per cent. in English, 14 per cent. in Scotch, and 12 per cent. in Irish emigrants. Of the 91,060 British emigrants during last year, 45,792 left for the United States, 29,703 for the Australian Colonies, 7822 for British North America, and 7743 for all other places.

In England and Wales 887,055 births and 500,348 deaths were registered during 1877; the birth-rate was 36·1, and the death-rate 20·4 per 1000 persons living. The birth-rate exceeded by 0·5, while the death-rate was 1·6 below, the average rate in the ten preceding years. The death-rate was lower than that which has prevailed in any year since civil registration was established in 1837. The returns of marriages for the last three months of 1877 are not yet available; the marriage-rate in the first nine months of the year showed, however, a further decline from those which prevailed in the corresponding periods of recent years.

English mortality may be said to have been stationary during the twenty years 1851-70. It is, however, satisfactory to find that during the first seven years of the current decade the rate of mortality in England and Wales has showed a decided decline. During the ten years 1851-60 the average annual rate of mortality in England and Wales was equal to 22·2, and in the following ten years 1861-70 to 22·5 per 1000; during the seven years 1871-7 the average annual rate declined to 21·6. This decline of 0·8 per 1000 in the death-rate during the past seven years signifies that 132,433 persons have survived whose deaths would have been recorded, had the death-rate been equal to that which prevailed during the twenty years 1851-70. There appears good reason to infer that much of this saving of life, and consequent decrease of sickness, is both directly and indirectly due to the new era of sanitary progress inaugurated by the passing of the Public Health Acts of 1872 and 1875. It is only, however, necessary to point to the marked variations in local death-rates, and to the conclusive evidence of excessive mortality in the manufacturing and mining districts of Lancashire and Yorkshire, and elsewhere, to prove how much may be hoped from still further improvement in sanitary organization and administration.

The 500,348 deaths in 1877 included 120,611 of infants under one year of age, and 126,049 of persons aged upwards of 60 years. The rate of infant mortality measured by the proportion of deaths under one year to births registered, was equal to 136 per 1000, against 158 and 146 in 1875 and 1876. Infant mortality in 1877 was lower than in any year since 1837, when civil registration first supplied a satisfactory basis for its calculation. During 1876 and 1877 infant mortality averaged only 141 per 1000, whereas in the five preceding years it had been equal to 153 per 1000. The decline of infant mortality in 1877 was doubtless in some

measure due to the moderate temperature during the summer, which caused an unusually low death-rate from infantile diarrhoea; but the decline was not confined to the summer quarter of the year, and therefore appears to afford evidence of improved sanitary condition. The rate of mortality among persons aged upwards of 60 years, was equal to 68·7 per 1000 persons estimated to be living at those ages, which although almost identical with that which prevailed in 1876, showed a marked decline from the death-rates at similar ages in preceding years.

The deaths registered in England and Wales during the year, from all causes, included 64,454 which were referred to the seven principal zymotic diseases, showing a further decline of 8763 from the numbers referred to the same causes in 1875 and 1876. These 64,454 deaths included 4280 from small-pox, 8637 from measles, 14,230 from scarlet fever, 2522 from diphtheria, 10,518 from whooping-cough, 9481 from fever, and 14,786 from diarrhoea. The death-rate from these seven diseases was equal to 2·6 per 1000, against 3·3 and 3·0 in the two preceding years. The zymotic death-rate in 1877 appears to have been unprecedentedly low, and was no less than one per 1000 below the average zymotic rate in the seven years 1870-6; thus it may be estimated that about 24,547 lives survived the year 1877 that would have succumbed to these diseases had the rate equalled that which prevailed in the seven preceding years. The deaths referred to measles, scarlet fever, diphtheria, fever, and diarrhoea were considerably less numerous than those in 1876, whereas the fatal cases of small-pox and whooping-cough showed an increase. During the seven years 1870-6, the annual death-rate from fever—including typhus, enteric, and simple fevers—showed a steady decline, which was fully maintained during 1877. The annual death-rate from fever, which was equal to 79 per 100,000 persons living in 1870, has since continuously declined, and during 1877 did not exceed 39 per 100,000 or less than half the rate that ruled in 1870. As the proportional mortality in cases of fever averages nearly 20 per cent., it may easily be calculated that the actual reduction of deaths from this disease only partly represents the gain to the community due to the steadily declining prevalence of fever.

The inquest cases registered in 1877 were 25,623, equal to 5·1 per cent. of the total deaths; this was slightly below the proportion that prevailed in 1876. The deaths referred to different forms of violence were 16,718, and were 854 fewer than those resulting from violence in 1876.

The foregoing numbers being derived from the Quarterly Returns, furnished with commendable punctuality by the 2185 local registrars to the Registrar General, immediately after the close of each of the four quarters of the year, are subject to revision when the causes of death and other details are finally classified and tabled at the Central Office, for publication in the Annual Report for 1877.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1867-77**, and in each Quarter of those Years.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

Note.—The three months January, February, March, contain 90, and in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction is made in calculating the rate of mortality in the different quarters of the year. The annual rate is the mean of the four quarterly rates.

Note.—The deaths in Birmingham, Manchester, and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns (except for Salford and Oldham) are the numbers enumerated in April 1871, raised to the middle of 1877 by the addition of six and a quarter years' increase, calculated on the rate which prevailed between 1861 and 1871. The rate of increase of population in Salford and Oldham having since 1871 exceeded that which prevailed during the ten years, 1861–71, revised estimates have been adopted for those two boroughs, based upon special returns of inhabited houses now existing within those boroughs. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE VII.—Deaths in 20 large English Towns in the 13 Weeks ending 29th December 1877.
(Estimated aggregate population in middle of 1877, 7,077,406; viz., 3,533,484 in London, and 3,543,922 in the 19 other Towns; see note to Table VI.)

	X.—NORTHERN COUNTIES.							
551	South Shields - - - M -	103,312	983	579	37·7	22·2	5·3	Entire District.
552	Gateshead - - - M† -	60,561	638	350	41·8	22·9	2·6	Gateshead Sub-district.
554	Tynemouth - - - M† -	44,299	460	253	41·2	22·7	2·1	Nrth. Shields & Tynemouth Sub-district.
569	Carlisle - - - M† -	35,225	333	195	37·5	22·0	2·4	St. Cuthbert & St. Mary Sub-districts.
	XI.—MONMOUTHSH. & WALES.							
582	Newport (Monmouth) M† -	33,603	331	192	39·1	22·7	3·4	Newport Sub-district.
583	Cardiff - - - M† -	79,595	800	391	39·9	19·5	1·7	Cardiff Sub-district.
585	Merthyr Tydfil - - - P -	100,283	802	462	31·7	18·3	2·4	{ Lower and Upper Merthyr Tydfil and Aberdare Sub-districts.
588	Swansea - - - M -	74,246	743	377	40·0	20·1	1·7	{ Llangafelach, Swansea, and Llan-samlet Sub-districts.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District.

* For method of framing these estimates see note * to Table VI. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesborough have been based upon local information as to the increase of the inhabited houses in these boroughs.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situate outside that area.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1861 and 1871; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring.

TABLE XIII.—**Births and Deaths** in the **Fourth Quarter** of 1877 in **30 Foreign Cities**.

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page 14, note b.

NOTE.—The Registrars alone must be considered responsible for the correctness of their returns, and for the opinions expressed in the foot notes.

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND. of INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from WHOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also INQUEST CASES and in the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and of ENGLAND.

^b The present number of Superintendent Registrars' districts is 631. The above numerical arrangement—1 to 627—was adopted on 1st January 1871. Six new Superintendent Registrars' districts, viz., Fulham (1a), Prestwich (467a), Barrow-in-Furness (481a), Middlesbrough (532a), Lanchester (546), and Pontardawe (587a), have been constituted since 1871; and two Superintendent Registrars' districts have been abolished, viz., Shrewsbury (352), which has been incorporated with Atcham (351), and the parishes forming the district of Presteigne (307) have been added to the Superintendent Registrars' districts of Kington (343) and Knighton (608).

I.—LONDON.—REGISTRATION SUB-DISTRICTS.

Registration Sub-districts. ^a		Area in Statute Acres.	Enumerated Population, 1871.	Births ^a		Deaths ^a		The DEATHS in the Quarter are stated by the Registrars to include ^b

^a The Registration Sub-districts (2185 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

^b For London the numbers of Births and Deaths, as well as the details given, "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 30th September to 29th December 1877.

I.—LONDON.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1871.	Births		Deaths		The DEATHS in the Quarter are stated by the Registrars to include a													
				Registered in the Quarter ending 31 Dec. 1877.	Average in Quar- ters ending 31 Dec. in the 3 Years 1874-76.	Registered in the Quarter ending 31 Dec. 1877.	Deaths of		Deaths from												
							Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping- cough.	Fever.	Diarrhea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

a 193 : 5.—The 4 fatal cases of fever were described as typhoid.
b 194 : 3.—The first case of small-pox was imported from London. No effectual means for isolation have been taken by the public authorities until the last few days. A hospital has now been prepared, and will shortly be ready for patients. Of the 17 deaths, 13 of which were registered in December), 9 were of persons who had not been vaccinated, and 7 were not reported as to vaccination.
c 197 : 2.—No death from scarlet fever was registered in December.
d 198 : 2.—The ages of the 14 persons aged 60 years and upwards, whose deaths were registered, averaged 74 years.

a 301 : 3.—Scarlet fever, which has been prevalent in a malignant form, is now decreasing.
b 301 : 4.—Of the 19 deaths from scarlet fever, 10 occurred in Penzance, and 8 in the parish of Madron.
c 310 : 4.—The deaths from scarlet fever, and also 4 deaths from typhoid fever, occurred in different parts of the town. Fever has also been very prevalent, though not fatal, in the parish of Mudford.
d 311 : 4.—The Registrar says typhoid fever has been very prevalent.

^a 312 : 2.—Of the 4 fatal cases of fever, 3 were described as enteric.

^b 313 : 1.—The sub-district of Shepton Mallet includes the parishes and places which, prior to 1st October 1877, formed the sub-district of Stoke Lane.

^c 317 : 3.—The ages of the 27 persons aged 60 years and upwards, whose deaths were registered, averaged 71 years.

^d 319 : 1.—The Registrar partly attributes the low mortality to the activity of the officers under the sanitary authority, in preventing the spread of infectious diseases by isolation and other means.

a 351 : 8, 9.—The sub-districts of St. Mary and St. Chad, which formed the district of Shrewsbury previously to 1st October 1871, were on that date annexed, without change in their limits, to Atcham. The workhouse in St. Chad sub-district (351 : 9) has been discontinued since 25th March 1875.

b 360 : 1.—Of the 63 deaths from scarlet fever, 55 occurred in Stafford ; 30 in October, 17 in November, and 8 in December.

c 361 : 3.—The 22 deaths from scarlet fever occurred in Dresden, Florence, and Normacott, near Longton, in which neighbourhood the disease has been prevalent some months.

d 362 : 3.—Of the 16 deaths from scarlet fever, 2 occurred in October, 9 in November, and 5 in December.

e 363 : 2.—The deaths from scarlet fever occurred within the local board district.

f 363 : 3.—Of the 49 deaths from scarlet fever (47 of which occurred within the local board district), 20 were registered in October, 17 in November, and 12 in December.

^a 376 : 1.—Of the 8 fatal cases of fever, 7 were described as typhoid; 4 occurred in the township of Cradley, 2 in Hawn, and one in Cakemore.

^b 376 : 2.—Of the 29 deaths from scarlet fever, 14 occurred in Stourbridge, and 11 in Wollaston.

^c 380 : 3.—Only one of the deaths from scarlet fever was registered in December.

^d 381 : 1.—The ages of the 20 persons aged 60 years and upwards, whose deaths were registered, averaged 75 years.

^e 382 : 1.—The Registrar states that there have been about 70 cases of scarlet fever in the town of Evesham. The 6 deaths from diphtheria occurred at Harvington, a small parish containing a population of about 410 persons.

^f 383 : 1.—The 8 deaths from scarlet fever were of children under 7 years of age, and occurred at Eckington. There were cases in nearly every house in the village.

^g 387 : 1.—Of the 25 deaths in Public Institutions, 22 occurred in the children's hospital.

a 447 : 2.—The deaths from small-pox were registered in October: the disease has now disappeared.

b 447 : 3.—The death from small-pox occurred in the township of Lymm, where there are still several cases.

c 453 : 2.—Of the 6 deaths from diphtheria, 3 occurred in Lower Bebington, and 3 in Bromborough.

d 453 : 3.—The 9 deaths referred to diphtheria were certified by Dr. F. Pierce of West Kirby, Birkenhead, as "sloughing sore throat."

e 454 : 1.—Of the 23 fatal cases of fever, 14 were described as typhus, and 7 as typhoid.

f 454 : 2.—Of the 14 deaths from fever, 11 occurred in the Workhouse Hospital.

g 455 : 6.—An arrangement appears to exist between the vestry of Liverpool and the guardians of West Derby, by which West Derby fever cases are sent to Liverpool Workhouse, and Liverpool small-pox cases are sent to West Derby.

h 456 : 2.—Of the 7 deaths from small-pox, 5 occurred in Public Institutions.

VIII.—NORTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—*continued.*

a 501 : 5.—The 20 deaths from scarlet fever occurred within the jurisdiction of the Mirfield Local Board. The Registrar says their district is not yet drained, and that many families are not yet supplied with public water.

b 502 : 2.—Of the 34 deaths from scarlet fever, 23 occurred in Normanton, and 7 in Altofts.

c 505 : 3.—Of the 23 deaths from scarlet fever, 13 occurred in the township of Nether Hoyland, and 10 in Wombwell.

d 506 : 1.—The Registrar states that scarlet fever has been prevalent in almost every part of his sub-district.

e 506 : 4.—Of the 10 deaths from scarlet fever, 9 occurred in the parish of Tankersley.

f 503 : 1.—There is a decrease of population on account of many houses being pulled down for street improvements, and the erection of board schools.

a 547 : 1.—Of the 10 fatal cases of fever, 4 were described as typhus and 6 as typhoid. The Medical Officer of Health states that scarlet fever is spread by women unnecessarily visiting the sick and carrying home the infection.

b 551 : 1.—Of the 56 deaths from scarlet fever, 29 occurred in the Central or Laygate district, in streets immediately adjoining each other.

c 551 : 2.—Of the 34 deaths from scarlet fever, 30 occurred in the parish of Jarrow.

d 554 : 4.—Of the 17 deaths from scarlet fever, 4 were registered in October, 3 in November, and 10 in December; 12 occurred in the rural part of the parish, and 5 in the local board District.

a 622 : 2.—Of the 6 deaths from scarlet fever, 3 were registered in October, one in November, and 2 in December.

b 624 : 2.—Of the 11 deaths from scarlet fever, 3 occurred in the village of Ebenezer and 4 in Clwt y Bont.

c 626 : 2.—Of the 14 deaths from scarlet fever, 10 occurred in Llandudno.

d 627.—See page 13, note b.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING DECEMBER 31ST, 1877.

By JAMES GLAISHER, Esq., F.R.S., &c.

The month of October opened fine and dry, with a low temperature; on the 14th there was a severe gale, causing great destruction of property all over the country; the storm seems to have raged throughout Devonshire and Cornwall with great fury, and caused there a great deal of damage; there was but little rain at any station in England, and none at those stations in the Eastern Counties on this day, but there was a very heavy rainfall in Scotland. After this day to the end of the month the weather was generally fine. The month of November was for the most part cloudy, wet, and with very few bright days; the changes both of temperature and atmospheric pressure were rapid; on the 11th there was a very heavy gale of wind, and the barometer reading on this day was the lowest in the year. The month of December was very dark, and almost sunless, with fog and damp weather prevalent. Till the 9th of October the direction of the wind was mostly from the N. or E., or a compound of these winds; and from the 10th of October to the end of the year the wind was almost always from the W., S.W., or S.S.W., to a very unusual degree.

Till the 19th of October, with the exception of the 13th and 14th, the temperature daily was low; the defect for these 19 days was on the average $4\frac{1}{4}^{\circ}$ daily. From October 20th to November 4th the weather was mostly warm, but occasionally it was cold; upon the average of these 15 days there was an excess of temperature of $2\frac{1}{4}^{\circ}$ daily. On November 5th a considerable increase of warmth took place, and continued till the gale of the 11th day; the average daily excess of these seven days was $7\frac{1}{4}^{\circ}$; on the 12th, immediately following the gale, a considerable depression of temperature took place, and from this day to December 28th the changes of temperature from warm to cold and vice versa were frequent, the warm periods being somewhat longer than the cold; the average of the 47 days ending December 28th was $\frac{3}{4}^{\circ}$ in excess of daily temperature. The year closed with the three finest and warmest days in the month, whose mean temperature was $8\frac{1}{4}^{\circ}$ daily in excess of their average.

The readings of the barometer in the neighbourhood of London were above their averages from the 1st to the 21st (with the exception of two days, viz., 14th and 15th, which were $0\cdot13$ in. and $0\cdot02$ in. respectively below); they were below from the 22nd to the 27th, above on the 28th, below on the 29th and 30th, and $0\cdot28$ in. above on the last day. The mean reading for the month was $29\cdot849$ ins., being $0\cdot151$ in. above the average. During the first three days of November the barometer readings were above their averages; from the 4th to the 13th they were below, that for the 12th being no less than $0\cdot95$ in. in defect; they were above from the 15th to the 18th, and below from the 19th to the end of the month; the mean amount in defect of the average for these 12 days was $0\cdot42$ in. daily. The mean reading for the 29th was $28\cdot75$ ins., being $0\cdot96$ in. below the average. The mean reading for the month was $29\cdot517$ ins., being $0\cdot233$ ins. below the average. In December the readings of the barometer were alternately above and below their averages from the 1st to the 13th, they were all above their averages from the 14th to the 23rd, all below from the 24th to the 30th, and $0\cdot11$ in. above on the last day of the year. The mean reading for the month was $29\cdot863$ ins., being $0\cdot072$ in. above the average.

The highest and the lowest readings of the barometer in the year occurred during this quarter, viz., the highest reading in the year was $30\cdot517$ ins. on December 20th, and the lowest reading in the year was $28\cdot549$ in. on November 11th, thus giving a range of $1\cdot968$ in.

At Greenwich the mean temperature of October was below that of September by $4^{\circ}3$; that of November was below that of October by $3^{\circ}1$; and that of December was below that of November by $4^{\circ}7$. (From the preceding 36 years' observations the mean temperature of October is lower than that of September by $7^{\circ}1$; that of November is lower than that of October by $6^{\circ}6$; and that of December is lower than that of November by $3^{\circ}4$.)

The mean temperature of the air for October below that of September over the whole country was $3^{\circ}4$; that of November below that of October was $3^{\circ}7$; and that of December below that of November was $4^{\circ}1$.

The mean temperature of the air for October was $48^{\circ}6$, being $0^{\circ}5$ and $1^{\circ}6$ below the averages of the preceding 106 years, and 36 years respectively. It was $4^{\circ}2$ lower than the value in 1876.

The mean temperature of the air for November was $45^{\circ}5$, being $3^{\circ}2$ and $1^{\circ}9$ above the averages of the preceding 106 years, and 36 years respectively. It was higher than any value recorded back to 1863. In the preceding 106 years there have been 13 instances when the mean temperature of November was as high as in the present year, viz., $45^{\circ}5$. In 1806 = $47^{\circ}4$, 1817 = $46^{\circ}9$, 1818 = $49^{\circ}2$, 1821 = $47^{\circ}6$, 1822 = $48^{\circ}2$, 1824 = $46^{\circ}2$, 1845 = $45^{\circ}8$, 1846 = $46^{\circ}0$, 1847 = $46^{\circ}9$, 1850 = $46^{\circ}5$, 1852 = $48^{\circ}9$, 1857 = $45^{\circ}8$, 1863 = $45^{\circ}7$.

The mean temperature of the air for December was $40^{\circ}8$, being $1^{\circ}7$, and $0^{\circ}6$ above the averages of the preceding 106 years, and 36 years respectively. It was $3^{\circ}3$ lower than the value in 1876, and $2^{\circ}1$ higher than that in 1875.

The mean temperature of the air for the quarter was $45^{\circ}0$, being $1^{\circ}5$ and $0^{\circ}3$ above the averages of the preceding 106 years and 36 years respectively.

The mean high day temperatures of the air were $2^{\circ}9$ and $0^{\circ}4$ above their respective averages in November and December, but $0^{\circ}4$ below in October.

The mean low night temperatures of the air for October was $3^{\circ}3$ below the average; that for November was $1^{\circ}8$ above the average; and that for December was the same as the average. Therefore the days and nights in October were cold, but generally warm in November and December.

The mean daily ranges of temperature were $2^{\circ}9$, $1^{\circ}1$, and $0^{\circ}6$ above their respective averages in October, November, and December.

At Greenwich the atmospheric pressure in October was less than in September by 0.054 in., in November was less than in October by 0.332 in., and in December greater than in November by 0.346 in. (From the preceding 36 years' observations the mean pressure in October is less than in September by 0.104 in., in November greater than in October by 0.052 in., and in December greater than in November by 0.041 in.) The mean decrease of pressure from September to October south of latitude 51° was 0.025 in., between 51° and 52° was 0.042 in., from 52° to 53° was 0.058 in., between 53° and 54° was 0.130 in.; and north of 54° was 0.172 in. The decrease from October to November was somewhat smaller at southern stations than at northern; the mean of all was 0.355 in.; and the increase from November to December was from all stations 0.431 in.

The fall of rain in October was 1.7 in., being 1.1 in. below the average; in November it was 3.4 ins., being 1.1 in. above the average; and in December was 1.8 in., being 0.2 in. below the average. Back to 1818 there are but 11 instances of so large a fall of rain in November as in the present year, viz.:—In 1821, when it was 4.7 in.; in 1822= 4.1 in.; 1824= 4.3 in.; 1830= 3.4 in.; 1839= 4.4 in.; 1841= 3.7 in.; 1842= 4.2 in.; 1844= 4.3 in.; 1852= 6.0 in.; 1861= 5.2 in.; and 1871= 3.6 in. The fall of rain in the quarter was 6.9 ins., being 0.2 in. below the average. The fall of rain in November was generally greatly in excess, particularly at extreme southern stations. At Cockermouth the fall was 9.86 ins., being higher than at any other station; it was the wettest November there for 16 years, the fall not having been equalled in amount in any one month since October 1862. On November 12th, there was a flood greater than any since October 1874.

On November 11th, the day of the great gale, the fall of rain at Guernsey was 1.65 in.; at Truro, 1.05 in.; at Torquay, 1.25 in.; at Ventnor, 1.07 in.; at Weybridge, 1.58 in.; at Chiswick, 1.02 in.; at Marlborough, 1.65 in.; and at Gloucester 1.02 in.; on this day scarcely any rain fell either in the Midland or Eastern counties.

Thunderstorms occurred on the 15th and 16th of October at Stonyhurst, on the 22nd at Carlisle and Milltown, and on the 27th at Eccles; on the 9th of November at Helston, Truro, and Plymouth, on the 10th at Torquay, Osborne, Weybridge, Oxford, Royston, Cardington, and Cambridge, on the 12th at Silloth, on the 13th at Eccles and Llandudno, on the 19th at Eccles, on the 22nd at Halifax and Bradford, and on the 30th at Guernsey; on the 1st and 2nd of December at Helston, and on the 7th and 12th at Stonyhurst.

Thunder was heard but lightning was not seen on the 11th of October at Silloth and Carlisle, on the 20th at Silloth, and on the 27th at Cockermouth; on the 12th of November at Weybridge; and on the 14th of December at Stonyhurst.

Lightning was seen but thunder was not heard on 11th of October at Royston, Cardington, Cambridge, Carlisle, and North Shields, on the 15th at Torquay and Halifax, on the 16th at Torquay, Royston, and Liverpool, on the 22nd at Silloth, on the 27th at Halifax and Stonyhurst, and on the 28th at Stonyhurst; on the 9th of November at Torquay, Oxford, Cardington, Liverpool, Llandudno, Halifax, and Stonyhurst, on the 10th at Helston, Truro, Llandudno, Halifax, and Cockermouth, on the 11th and 12th at Llandudno, on the 13th at Guernsey, on the 21st at Guernsey and Truro, on the 22nd at Eccles, on the 23rd at Llandudno, Halifax, Stonyhurst, Leeds, and Cockermouth, on the 27th at Eccles and Carlisle, on the 28th at Torquay, Llandudno, and Carlisle, on the 29th at Guernsey and Torquay, and on the last day of the month at Weybridge. And on the 26th of December at Stonyhurst.

Solar halos were seen on the 6th of October at Oxford, Kelstern Grange, Halifax, and Carlisle, on the 11th at Torquay, on the 12th at Oxford and Halifax, and on the 17th at Torquay; on the 2nd of November at Carlisle, on the 3rd at Torquay, on the 7th at Torquay, Halifax, and Stonyhurst, on the 8th at Weybridge and Oxford, on the 17th, 18th, and 23rd at Torquay, on the 26th at Kelstern Grange, on the 27th at Oxford, and on the 28th at Torquay; on the 5th of December at Torquay, on the 7th at Torquay and Oxford, on the 13th at Oxford, on the 15th at Halifax, on the 25th at Oxford, on the 27th at Torquay, and on the 28th at Kelstern Grange.

Lunar halos were seen on the 18th of October at Helston and Torquay, on the 20th at Weybridge, Oxford, and Cambridge, on the 21st at Torquay and Carlisle, on the 21st at Torquay, on the 22nd at Weybridge, Oxford, and Cambridge, on the 23rd at Oxford, on the 24th at Cambridge, and on the 26th at Torquay and Oxford; on the 15th of November at Hull and Stonyhurst, on the 16th at Cockermouth, on the 17th at Torquay, Strathfield Turgiss, Weybridge, Oxford, Cambridge, Kelstern Grange, and Llandudno, on the 18th at Oxford and Stonyhurst, on the 19th at Oxford, on the 20th at Torquay and Stonyhurst, on the 21st at North Shields, on the 23rd at Strathfield Turgiss, and Weybridge, on the 24th at Oxford, on the 25th at Torquay and Kelstern Grange, and on the 26th at Torquay and Oxford; on the 15th of December at Oxford, Liverpool, and Stonyhurst, on the 16th at Torquay and Oxford, on the 18th and 19th at Liverpool, on the 20th at Bradford, on the 23rd at Oxford and Stonyhurst, on the 26th at Truro, and on the 28th at Weybridge.

Auroræ Borealis were seen, faintly, on the 10th and 28th of November at Torquay.

Snow fell on the 16th of October at Silloth and Carlisle. On the 10th of November at Oxford; on the 20th at Carlisle; on the 24th at Torquay and Osborne; and on the 28th at Bradford. On the 1st, 5th, and 6th of December at Llandudno; on the 7th at Bradford; on the 12th at Llandudno; on the 13th at Llandudno and Bradford; on the 14th at Llandudno; on the 24th at Oxford, Eccles, Bywell, and North Shields; on the 25th, 26th, 27th, and 28th generally between the latitudes of 51° and 54° .

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies *above* the average, and that the minus sign (−) signifies *below* the average.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter were as follows:—

Direction of Wind.	OCTOBER.			NOVEMBER.			DECEMBER.		
	Average.	1877.	Departure from Average.	Average.	1877.	Departure from Average.	Average.	1877.	Departure from Average.
N.W.	d. 2	d. 0	d. −2	d. 2½	d. 3	d. +½	d. 2	d. 3	d. +1
N.	3	4	+1	3½	1	−2½	2½	3	+½
N.E.	2½	2	−½	3½	1	−2½	2½	2	−½
E.	1½	1	−½	2	2	0	1½	0	−1½
S.E.	1½	3	+1½	2	0	−2	1½	1	−½
S.	3½	4	+½	3½	6	+2½	3	3	0
S.W.	9	8	−1	7½	13	+5½	9½	8	−1½
W.	4½	8	+3½	2	4	+2	3½	10	+6½
Calm (nearly.)	3½	1	−2½	3½	0	−3½	4	1	−3

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of October are opposite to the S.E. and W., in November to the S. and S.W., and in the month of December to the W.

The minus sign (−) denotes defects below averages; the largest numbers affected with this sign in the month of October are opposite to the N.W., in November to the N. and N.E., and in December to the E. and S.W.

Hail fell on 9 days in October, 15 days in November, and on 12 days in December.

Fog prevailed on 17 days in October, 13 in November, and on 18 days in December, or on 48 days during the quarter.

Trees divested of leaves:—*The Field Elm* on the 2nd of November at Hull; on the 10th at Weybridge; and on the 15th at Guernsey. *The Wych Elm* on the 22nd of October at Oxford; on the 30th at Torquay; on the 5th of November at Oxford; and on the 6th at Hull. *The Oak* on the 3rd of November at Oxford; on the 15th at Guernsey; on the 16th at Hull; and on the 3rd of December at Torquay. *The Lime* on the 25th of October at Guernsey; on the 26th at Oxford; and on the 30th at Weybridge and Hull. *The Sycamore* on the 28th of October at Weybridge; on the 1st of November at Hull; and on the 15th at Guernsey. *The Horse chestnut* on the 14th of October at Oxford; on the 26th at Hull; on the 27th at Weybridge; and on the 30th at Guernsey. *The Common Poplar* on the 26th of October at Oxford; on the 30th at Torquay; and on the 6th of November at Hull. *The Occidental Plane* on the 17th of November at Hull. *The Oriental Plane* on the 12th of November at Hull. *The Hawthorn* on the 2nd of November at Weybridge; and on the 9th at Hull. *The Hazel* on the 9th of November at Hull. *The Walnut* on the 8th of November at Hull.

Acacia in blossom on the 25th of December at Helston.

Swallow departed on the 7th of October from Hull; on the 14th from Weybridge.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING DECEMBER 31ST, 1877.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the sixth edition of his Hygrometrical Tables.

Names of Stations and Observers.	Height of Station above Sea Level.	Year 1877.	Pressure of Atmosphere in Month.		Temperature of Air in Month.					Mean Temperature.		Vapour.		Mean Reading of Thermometer.		Wind.				Mean Amount of Ozone.	Mean Amount of Cloud.	Number of Days it fell.	Rain.

The highest temperatures of the air were at Barnstaple, $73^{\circ}0$; Gloucester, $71^{\circ}0$; and Ventnor, $70^{\circ}2$.
The lowest temperatures of the air were at Allenheads, $20^{\circ}1$; Salisbury, $22^{\circ}0$; Chiswick, $23^{\circ}0$; and Gloucester, $23^{\circ}5$.
The greatest daily ranges of the temperatures of the air were at Salisbury, $19^{\circ}4$; Chiswick, $17^{\circ}3$; and Gloucester, $15^{\circ}8$.
The least daily ranges of the temperatures of the air were at Guernsey, $8^{\circ}4$; Bradford and Cocker-mouth, both $8^{\circ}7$; and Liverpool, $9^{\circ}3$.
The greatest number of rainy days were at Stonyhurst, 74; Carlisle, 72; Oxford, 71; and Nottingham 70.
The least number of rainy days were at Chiswick, 42; Cardington and Holkham, both 43; and Hull 46.
The heaviest falls of rain were at Cocker-mouth, 21'02 inches; Stonyhurst, 19'60 inches; and Barnstaple, 16'83 inches.
The least falls of rain were at Leicester, 5'51 inches; Cambridge, 5'64 inches; and Royston, 5'78 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.		Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Read- ings of the Thermometer.	Mean of all Lowest Read- ings of the Thermometer.	Mean Range of the Thermo- meter in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Max- imum in Rays of Sun.	Mean Reading of Min- imum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.		Mean Amount of Cloud.		RAIN.	
																				Relative Pro- portion of									
																				N.	E.	S.	W.			Mean Number of Days it fell.	Mean Amount col- lected.
